| <b>About This Book .....</b>                             | <b>xxi</b> |
| <b>CHAPTER 1            Troubleshooting Hints .....</b>  | <b>1</b>   |
| Solutions for specific conditions .....                  | 2          |
| Server recovery and database repair .....                | 2          |
| Server operational issues .....                          | 3          |
| Database connection issues .....                         | 13         |
| Multiplex issues .....                                   | 16         |
| dbisql/dbisqlc issues .....                              | 16         |
| Resource issues .....                                    | 17         |
| Processing issues .....                                  | 23         |
| Performance issues .....                                 | 28         |
| Sybase Central issues .....                              | 28         |
| Troubleshooting network communications .....             | 28         |
| Ensuring that you are using compatible protocols .....   | 29         |
| Ensuring that you have current drivers .....             | 29         |
| Switching off your computer between reboots .....        | 30         |
| Diagnosing your protocol stack layer by layer .....      | 30         |
| Testing a NetBIOS protocol stack .....                   | 30         |
| Testing a TCP/IP protocol stack .....                    | 31         |
| Diagnosing wiring problems .....                         | 32         |
| Checking common network communications problems .....    | 32         |
| Diagnostic tools .....                                   | 34         |
| The sp_iqstatus stored procedure .....                   | 34         |
| The sp_iqcheckdb stored procedure .....                  | 36         |
| Checking database and server startup option values ..... | 36         |
| Finding the currently executing statement .....          | 37         |
| Logging server requests .....                            | 37         |
| Connection for collecting diagnostic information .....   | 39         |
| Diagnosing communications issues .....                   | 40         |
| Reporting problems to Technical Support .....            | 40         |
| Collecting diagnostic information using getiqinfo .....  | 40         |
| Information collected by getiqinfo .....                 | 42         |
| Correlating connection information .....                 | 43         |

|                  |   |            |
|------------------|---|------------|
|                  | Another source of helpful information.....              | 45         |
|                  | Checklist: information for Technical Support.....       | 46         |
| <b>CHAPTER 2</b> | <b>System Recovery and Database Repair .....</b>        | <b>47</b>  |
|                  | Recovery and repair overview.....                       | 47         |
|                  | Normal recovery .....                                   | 48         |
|                  | Database verification.....                              | 49         |
|                  | The sp_iqcheckdb stored procedure .....                 | 49         |
|                  | sp_iqcheckdb output .....                               | 53         |
|                  | Resource issues running sp_iqcheckdb.....               | 56         |
|                  | Database repair.....                                    | 57         |
|                  | Analyzing index errors.....                             | 57         |
|                  | Repairing index errors .....                            | 60         |
|                  | Analyzing allocation problems.....                      | 63         |
|                  | Repairing allocation problems .....                     | 65         |
|                  | Special recovery modes.....                             | 68         |
|                  | Starting a server in forced recovery mode .....         | 68         |
|                  | Leaked space recovery .....                             | 70         |
|                  | Replacing write servers .....                           | 72         |
|                  | Emergency recovery without a transaction log .....      | 72         |
|                  | -f recovery option.....                                 | 72         |
|                  | Handling unrepairable problems .....                    | 73         |
|                  | Index problems that cannot be repaired.....             | 74         |
|                  | Dropping inconsistent indexes, tables, or columns ..... | 75         |
|                  | DBCC error messages.....                                | 76         |
| <b>CHAPTER 3</b> | <b>Error Messages by SQLCODE.....</b>                   | <b>79</b>  |
|                  | Error messages listed by SQLCODE .....                  | 79         |
| <b>CHAPTER 4</b> | <b>Error Messages by SQLSTATE .....</b>                 | <b>127</b> |
|                  | Error messages listed by SQLSTATE .....                 | 127        |
| <b>CHAPTER 5</b> | <b>Error Messages by Sybase Error Code .....</b>        | <b>175</b> |
|                  | Error messages listed by Sybase error code .....        | 175        |
| <b>CHAPTER 6</b> | <b>Database Error Messages.....</b>                     | <b>227</b> |
|                  | Error message descriptions .....                        | 227        |
|                  | 0 .....   | 228        |
|                  | Error 72 .....  | 228        |
|                  | Error 74 .....  | 229        |
|                  | Error 75 .....  | 229        |

| Internal errors (assertion failed) ..... | 456 |

**CHAPTER 7**

**SQL Preprocessor Error Messages ..... 459**

|  |     |
|--|-----|
| Alphabetic list of SQLPP messages.....                       | 459 |
| SQLPP messages indexed by error message value.....           | 461 |
| subscript value %1 too large .....                           | 461 |
| combined pointer and arrays not supported for host types ... | 462 |
| only one dimensional arrays supported for char type.....     | 462 |
| VARCHAR type must have a length.....                         | 462 |
| arrays of VARCHAR not supported.....                         | 462 |
| VARCHAR host variables cannot be pointers .....              | 463 |
| initializer not allowed on VARCHAR host variable .....       | 463 |
| FIXCHAR type must have a length .....                        | 463 |
| arrays of FIXCHAR not supported.....                         | 463 |
| arrays of this type not supported .....                      | 464 |
| precision must be specified for decimal type.....            | 464 |
| arrays of decimal not allowed.....                           | 464 |
| Unknown hostvar type.....                                    | 464 |
| invalid integer .....  | 465 |
| '%1' host variable must be a C string type .....             | 465 |

|   |     |
|---|-----|
| '%1' symbol already defined .....                                 | 465 |
| invalid type for sql statement variable .....                     | 465 |
| Cannot find include file '%1' .....                               | 466 |
| host variable '%1' is unknown .....                               | 466 |
| indicator variable '%1' is unknown.....                           | 466 |
| invalid type for indicator variable '%1' .....                    | 466 |
| invalid host variable type on '%1' .....                          | 467 |
| host variable '%1' has two different definitions.....             | 467 |
| statement '%1' not previously prepared .....                      | 467 |
| cursor '%1' not previously declared.....                          | 467 |
| unknown statement '%1' .....                                      | 468 |
| host variables not allowed for this cursor .....                  | 468 |
| host variables specified twice - on declare and open.....         | 468 |
| must specify a host list or using clause on %1.....               | 468 |
| no INTO clause on SELECT statement.....                           | 469 |
| incorrect SQL language usage -- that is a '%1' extension.....     | 469 |
| incorrect Embedded SQL language usage -- that is a '%1' extension |     |
| 469   |     |
| incorrect Embedded SQL syntax.....                                | 469 |
| missing ending quote of string.....                               | 469 |
| token too long.....   | 470 |
| '%1' host variable must be an integer type.....                   | 470 |
| must specify an SQLDA on a DESCRIBE .....                         | 470 |
| Two SQLDAs specified of the same type (INTO or USING) .           | 470 |
| cannot describe static cursors.....                               | 471 |
| Macros cannot be redefined.....                                   | 471 |
| Invalid array dimension .....                                     | 471 |
| invalid descriptor index.....                                     | 471 |
| invalid field for SET DESCRIPTOR.....                             | 471 |
| field used more than once in SET DESCRIPTOR statement             | 472 |
| data value must be a host variable.....                           | 472 |
| Into clause not allowed on declare cursor - ignored.....          | 472 |
| unrecognized SQL syntax .....                                     | 472 |
| unknown SQL function '%1'.....                                    | 473 |
| wrong number of parms to sql function '%1'.....                   | 473 |
| static statement names will not work properly                     |     |
| if used by 2 threads .....  | 473 |
| host variable '%1' has been redefined.....                        | 473 |
| vendor extension .....  | 474 |
| intermediate SQL feature .....                                    | 474 |
| full SQL feature .....  | 474 |
| transact SQL extension .....                                      | 474 |
| no declare section and no INCLUDE SQLCA statement .....           | 475 |
| unable to open temporary file .....                               | 475 |

error reading temporary file ..... 475  
error writing output file ..... 475  
Inconsistent number of host variables for this cursor ..... 475  
Inconsistent host variable types for this cursor ..... 476  
Inconsistent indicator variables for this cursor ..... 476  
no OPEN for cursor '%1' ..... 476  
no FETCH or PUT for cursor '%1' ..... 476  
Host variable '%1' is in use more than once with different indicators

# About This Book

This manual, *Sybase IQ Troubleshooting and Error Messages Guide*, is a reference guide for troubleshooting Sybase® IQ and understanding possible error messages. While other manuals provide more context on how to carry out particular tasks, this manual offers suggestions for resolving various problems you may occasionally encounter, including server recovery and database repair. It also provides listings of IQ error and warning messages by SQLCODE, SQLSTATE, and Sybase error code reference and SQL preprocessor errors and warnings.

## Audience

This manual is for all users of Sybase IQ. Use it in conjunction with other manuals in the documentation set.

## How to use this book

The following table shows which sections fit a particular interest or need.

**Table 1: Guide to using this book**

| <b><i>To do this...</i></b>  | <b><i>Read this section...</i></b>  |
|--|---|
| Troubleshoot specific problems                                     | “Solutions for specific conditions” on page 2   |
| Troubleshoot network problems                                      | “Troubleshooting network communications” on page 28   |
| Collect diagnostic information                                     | “Diagnostic tools” on page 34<br>“Collecting diagnostic information using getiqinfo” on page 40 |
| Recover databases under normal conditions                          | “Normal recovery” on page 48  |
| Verify database consistency  | “Database verification” on page 49  |
| Repair index problems  | “Analyzing index errors” on page 57   |
| Repair allocation problems   | “Analyzing allocation problems” on page 63  |
| Recover databases under special conditions                         | “Special recovery modes” on page 68   |
| Resolve unrepairable problems                                      | “Handling unrepairable problems” on page 73   |
| Find Technical Support information                                 | “Reporting problems to Technical Support” on page 40  |
| Find IQ error messages referenced by SQLCODE                       | “Error messages listed by SQLCODE” on page 79   |
| Find IQ error messages referenced by SQLSTATE                      | “Error messages listed by SQLSTATE” on page 127   |
| Find IQ error messages referenced by Sybase error code and SQLCODE | “Error messages listed by Sybase error code” on page 175  |
| Find IQ error message descriptions referenced by SQLCODE           | “Error message descriptions” on page 227  |

---

**To do this...**

Find SQL preprocessor (SQLPP) errors and warnings

**Read this section...**

“Alphabetic list of SQLPP messages” on page 459

“SQLPP messages indexed by error message value” on page 461

---

**Note** The Windows information in this book applies to all supported Windows platforms, unless noted otherwise. For supported Windows platforms, see the *Release Bulletin Sybase IQ for Windows*.

---

**Related documents**

Documentation for Sybase IQ:

- *Introduction to Sybase IQ*

Read and try the hands-on exercises if you are unfamiliar with Sybase IQ, with the Sybase Central™ database management tool.

- *New Features in Sybase IQ 12.6*

Read just before or after purchasing Sybase IQ for a list of new features.

- *Sybase IQ Performance and Tuning Guide*

Read to understand query optimization, design, and tuning issues for very large databases.

- *Sybase IQ Reference Manual*

Read for a full description of the SQL language, stored procedures, data types, and system tables supported by Sybase IQ.

- *Sybase IQ System Administration Guide*

Read to manage the IQ Store.

- *Sybase IQ Utility Guide*

Read for Sybase IQ utility program reference material, such as available syntax, parameters, and options.

- *Large Objects Management in Sybase IQ*

Read to understand storage and retrieval of Binary Large Objects (BLOBs) and Character Large Objects (CLOBs) within the Sybase IQ data repository. You need a separate license to install this product option.

- *Sybase IQ Installation and Configuration Guide*

Read the edition for your platform before and while installing Sybase IQ, when migrating to a new version of Sybase IQ, or when configuring Sybase IQ for a particular platform.

- *Sybase IQ Release Bulletin*

Read just before or after purchasing Sybase IQ for last minute changes to the product and documentation. Read for help if you encounter a problem.

---

**Note** Because Sybase IQ is an extension of Adaptive Server® Anywhere, a component of SQL Anywhere® Studio, IQ supports many of the same features as Adaptive Server Anywhere. The IQ documentation set refers you to SQL Anywhere Studio documentation where appropriate.

---

Documentation for Adaptive Server Anywhere:

- *Adaptive Server Anywhere Programming Guide*

Intended for application developers writing programs that directly access the ODBC, Embedded SQL™, or Open Client™ interfaces, this book describes how to develop applications for Adaptive Server Anywhere.

- *Adaptive Server Anywhere Database Administration Guide*

Intended for all users, this book covers material related to running, managing, and configuring databases and database servers.

- *Adaptive Server Anywhere Error Messages*

This book lists all Adaptive Server Anywhere error messages with diagnostic information.

- *Adaptive Server Anywhere SQL Reference Manual*

Intended for all users, this book provides a complete reference for the SQL language used by Adaptive Server Anywhere. It also describes the Adaptive Server Anywhere system tables and procedures.

You can also refer to the Adaptive Server Anywhere documentation in the SQL Anywhere Studio 9.0.1 collection on the Sybase Product Manuals Web site. To access this site, go to Product Manuals at <http://www.sybase.com/support/manuals/>.

#### **Other sources of information**

Use the Sybase Getting Started CD, the SyBooks CD, and the Sybase Product Manuals Web site to learn more about your product:

- The Getting Started CD contains release bulletins and installation guides in PDF format, and may also contain other documents or updated information not included on the SyBooks CD. It is included with your software. To read or print documents on the Getting Started CD, you need Adobe Acrobat Reader, which you can download at no charge from the Adobe Web site using a link provided on the CD.

- 
- The SyBooks CD contains product manuals and is included with your software. The Eclipse-based SyBooks browser allows you to access the manuals in an easy-to-use, HTML-based format.

Some documentation may be provided in PDF format, which you can access through the PDF directory on the SyBooks CD. To read or print the PDF files, you need Adobe Acrobat Reader.

Refer to the *SyBooks Installation Guide* on the Getting Started CD, or the *README.txt* file on the SyBooks CD for instructions on installing and starting SyBooks.

- The Sybase Product Manuals Web site is an online version of the SyBooks CD that you can access using a standard Web browser. In addition to product manuals, you will find links to EBFs/Maintenance, Technical Documents, Case Management, Solved Cases, newsgroups, and the Sybase Developer Network.

To access the Sybase Product Manuals Web site, go to Product Manuals at <http://www.sybase.com/support/manuals/>.

## **Sybase certifications on the Web**

Technical documentation at the Sybase Web site is updated frequently.

### **❖ Finding the latest information on product certifications**

- 1 Point your Web browser to Technical Documents at <http://www.sybase.com/support/techdocs/>.
- 2 Select Products from the navigation bar on the left.
- 3 Select a product name from the product list and click Go.
- 4 Select the Certification Report filter, specify a time frame, and click Go.
- 5 Click a Certification Report title to display the report.

### **❖ Creating a personalized view of the Sybase Web site (including support pages)**

Set up a MySybase profile. MySybase is a free service that allows you to create a personalized view of Sybase Web pages.

- 1 Point your Web browser to Technical Documents at <http://www.sybase.com/support/techdocs/>.
- 2 Click MySybase and create a MySybase profile.

## Sybase EBFs and software maintenance

### ❖ Finding the latest information on EBFs and software maintenance

- 1 Point your Web browser to the Sybase Support Page at <http://www.sybase.com/support>.
- 2 Select EBFs/Maintenance. If prompted, enter your MySybase user name and password.
- 3 Select a product.
- 4 Specify a time frame and click Go. A list of EBF/Maintenance releases is displayed.

Padlock icons indicate that you do not have download authorization for certain EBF/Maintenance releases because you are not registered as a Technical Support Contact. If you have not registered, but have valid information provided by your Sybase representative or through your support contract, click Edit Roles to add the “Technical Support Contact” role to your MySybase profile.

- 5 Click the Info icon to display the EBF/Maintenance report, or click the product description to download the software.

## Syntax conventions

This documentation uses the following syntax conventions in syntax descriptions:

- **Keywords** SQL keywords are shown in UPPER CASE. However, SQL keywords are case insensitive, so you can enter keywords in any case you wish; SELECT is the same as Select which is the same as select.
- **Placeholders** Items that must be replaced with appropriate identifiers or expressions are shown in *italics*.
- **Continuation** Lines beginning with ... are a continuation of the statements from the previous line.
- **Repeating items** Lists of repeating items are shown with an element of the list followed by an ellipsis (three dots). One or more list elements are allowed. If more than one is specified, they must be separated by commas.
- **Optional portions** Optional portions of a statement are enclosed by square brackets. For example:

```
RELEASE SAVEPOINT [ savepoint-name ]
```

---

It indicates that the *savepoint-name* is optional. The square brackets should not be typed.

- **Options** When none or only one of a list of items must be chosen, the items are separated by vertical bars and the list enclosed in square brackets. For example:

```
[ ASC | DESC ]
```

It indicates that you can choose one of ASC, DESC, or neither. The square brackets should not be typed.

- **Alternatives** When precisely one of the options must be chosen, the alternatives are enclosed in curly braces. For example:

```
QUOTES { ON | OFF }
```

It indicates that exactly one of ON or OFF must be provided. The braces should not be typed.

## Typographic conventions

Table 2 lists the typographic conventions used in this documentation.

**Table 2: Typographic conventions**

| Item              | Description   |
|-------------------|---|
| Code              | SQL and program code is displayed in a mono-spaced (fixed-width) font.  |
| User entry        | Text entered by the user is shown in bold serif type.   |
| <i>emphasis</i>   | Emphasized words are shown in italic.   |
| <i>file names</i> | File names are shown in italic.   |
| database objects  | Names of database objects, such as tables and procedures, are shown in bold, san-serif type in print, and in italic online. |

## The sample database

Sybase IQ includes a sample database, which many of the examples in the IQ documentation use.

The sample database represents a small company. It contains internal information about the company (employees, departments, and financial data), as well as product information (products), sales information (sales orders, customers, and contacts), and financial information (*fin\_code*, *fin\_data*).

The sample database is held in a file named *asiqdemo.db*, located in the directory *\$ASDIR/demo* on UNIX systems and *%ASDIR%\demo* on Windows systems.

## Accessibility features

This document is available in an HTML version that is specialized for accessibility. You can navigate the HTML with an adaptive technology such as a screen reader, or view it with a screen enlarger.

Sybase IQ 12.6 and the HTML documentation have been tested for compliance with U.S. government Section 508 Accessibility requirements. Documents that comply with Section 508 generally also meet non-U.S. accessibility guidelines, such as the World Wide Web Consortium (W3C) guidelines for Web sites.

For information about accessibility support in the Sybase IQ plug-in for Sybase Central, see “Using accessibility features” in *Introduction to Sybase IQ*. The online help for this product, which you can navigate using a screen reader, also describes accessibility features, including Sybase Central keyboard shortcuts.

---

**Note** You might need to configure your accessibility tool for optimal use. Some screen readers pronounce text based on its case; for example, they pronounce ALL UPPERCASE TEXT as initials, and MixedCase Text as words. You might find it helpful to configure your tool to announce syntax conventions. Consult the documentation for your tool and see “Using screen readers” in *Introduction to Sybase IQ*.

---

For information about how Sybase supports accessibility, see Sybase Accessibility at <http://www.sybase.com/accessibility>. The Sybase Accessibility site includes links to information on Section 508 and W3C standards.

For a Section 508 compliance statement for Sybase IQ, go to Sybase Accessibility at <http://www.sybase.com/products/accessibility>.

### **If you need help**

Each Sybase installation that has purchased a support contract has one or more designated people who are authorized to contact Sybase Technical Support. If you cannot resolve a problem using the manuals or online help, please have the designated person contact Sybase Technical Support or the Sybase subsidiary in your area.

# Troubleshooting Hints

This chapter offers suggestions for resolving various problems you may occasionally encounter in running Sybase IQ. Topics include:

- “Solutions for specific conditions”
- “Troubleshooting network communications”
- “Diagnostic tools”
- “Collecting diagnostic information using getiqinfo”
- “Reporting problems to Technical Support”

For information on resolving issues related specifically to IQ multiplex servers, see the section “Multiplex server migration and failover” in Chapter 14, “Backup and Data Recovery” of the *Sybase IQ System Administration Guide*.

If you are unable to resolve the problem using the methods described here, you may find additional help from the Sybase online support Web site, MySybase. MySybase lets you search through closed support cases, latest software bulletins, and resolved and known problems, using a view customized for your needs. You can even open a Technical Support case online. (See the section “Reporting problems to Technical Support” on page 40 for a list of the information to collect before opening a technical support case.)

MySybase can be used from most Internet browsers. Point your Web browser to Technical Documents at <http://www.sybase.com/support/techdocs/> and click MySybase for information on how to sign up for and use this free service.

## Solutions for specific conditions

This section describes types of conditions that may occur, where to get more information to diagnose the problem, and actions to try to resolve the problem. The issues described in this section are grouped in the following categories:

- “Server recovery and database repair”
- “Server operational issues”
- “Database connection issues”
- “Multiplex issues”
- “dbisql/dbisqlc issues”
- “Resource issues”
- “Processing issues”
- “Performance issues”
- “Sybase Central issues”

See the section “Diagnostic tools” on page 34 for instructions on how to obtain information you can use in diagnosing various conditions, including those described in the following sections.

### Server recovery and database repair

If you have trouble starting a server or database, if the database starts but you are unable to connect to it, or if problems are found during database verification, this section helps you determine the action you should take to resolve the problem.

#### ❖ Decision flow for server recovery and database repair

##### 1 Does the server start?

If the server starts, go to step 2.

If the server does not start, refer to the section “Server operational issues” on page 3. If you cannot start the server after following the suggestions in this section, then refer to the section “Starting a server in forced recovery mode” on page 68 and start the server in forced recovery mode.

If the server does not start in forced recovery mode, call Technical Support. A restore of the database from backup may be necessary.

2 Can you connect to the database?

If you cannot connect to the database, refer to the section “Database connection issues” on page 13 for troubleshooting suggestions.

If you can connect to the database and you previously started the server with forced recovery, refer to the section “Analyzing allocation problems” on page 63 for information on verifying database allocation and recovering leaked blocks.

If you can connect to the database, but suspect the database may be inconsistent, refer to the section “Database verification” on page 49 for information on checking the consistency of your database.

3 The server is running and you can connect, but you want to verify the consistency of your database.

If you previously started the server with forced recovery or you suspect database inconsistency, you should run DBCC checks to validate the database. Refer to the section “Database verification” on page 49 for information on checking both index consistency and database allocation.

4 The server is running, you can connect, you have run DBCC checks, and you need to repair the index inconsistencies or allocation problems detected by DBCC.

If `sp_iqcheckdb` reports errors in the Index Summary and Index Statistics sections of the results, refer to the section “Repairing index errors” on page 60 for the procedure to repair index problems using DBCC.

If `sp_iqcheckdb` reports errors in the Allocation Summary and Allocation Statistics sections of the results, refer to the section “Repairing allocation problems” on page 65 for the procedure to repair allocation problems using DBCC.

## Server operational issues

This section contains information about problems with the operation of the server, including startup, shutdown, unresponsiveness, and abnormal termination.

### Sybase IQ will not start

Possible causes

- Transaction log file does not match the database.

- Server cannot find the transaction log.
- Operating system is not at proper patch level.
- Network connections are not working.
- Server name is not unique on your network.
- Server port number is not unique on the machine.
- Server is already running as a Windows service (Windows systems only).
- Not enough available memory.
- Environment variables are not set correctly.
- You cannot run start\_asiq.

Action

**Transaction log file does not match the database** The following messages appear in the server log file (*.srvlog*) and in the window where you are starting the server:

```
Starting database "dbname" (/dbdir/dbname.db) at Fri Aug 27 2004 10:53
Transaction log: dbname.log
Error: Cannot open transaction log file -- Can't use log file "dbname.log"
since the database file has been used more recently
Cannot open transaction log file -- Can't use log file "dbname.log" since
the database file has been used more recently
Database server stopped at Fri Aug 27 2004 10:53
```

If these errors are reported when you are starting the server, check to be sure the server is using the correct transaction log file. If you cannot find the correct transaction log file, the safest way to recover from this situation is to restore from the last valid backup.

If you cannot find the correct transaction log and restoring from backup is not an option, then use the emergency recovery method described in “Emergency recovery without a transaction log” on page 72.

**Server cannot find the transaction log** If the server fails to start because it cannot find the transaction log, the following messages appear in the server log file:

```
Transaction log: /dbdir/dbname.log...
Error: Cannot open transaction log file -- No such file or directory
Cannot open transaction log file -- No such file or directory
```

If this error is reported when you attempt to start the server, find the transaction log file and copy the file to the same directory as the database *.db* file. If you cannot find the correct transaction log file, then restore from the last valid backup.

If no other option for starting the server is available, you may be able to start the server using the method discussed in “Emergency recovery without a transaction log” on page 72. Contact Sybase Technical Support for assistance, if necessary.

---

**Warning!** This procedure is highly risky and is not recommended except in extreme cases.

---

**Server name is not unique on your network** If the server name is not unique on your network, i.e., multiple systems have a server with the same name, the following messages appear in the server log file (\*.*srvlog* or the name specified in the -o startup option) when you attempt to start the server using `start_asiq`:

```
DBSPAWN ERROR:  -82
Unable to start specified database

Server failed to start
```

If you see these errors in the server log file and the server will not start, try to start the server using the `asiqsrv12` command. The `asiqsrv12` command returns a more specific error message:

```
A database server with that name has already started
```

Once you have verified that the problem is a duplicate server name on your network, start the server with a name that is different from the names of servers that are already running.

**Server port number is not unique on the machine** If an IQ server is running and you attempt to start another IQ server on the same machine using the same port number, the following messages appear in the server log file (\*.*srvlog*):

```
Trying to start TCPIP link ...
TCPIP communication link not started
Unable to initialize requested communication links
...
DBSPAWN ERROR:  -85
Communication error

Server failed to start
```

If you see these messages in the server log file and the server will not start, run the `stop_asiq` command to display the names and port numbers of IQ servers already running on the machine. Then try to start your server, specifying either a port number that is not in use or no port number. When you start a server and do not provide a port number (and the default port number is already in use), IQ generates an available port number.

Here are the messages you see in the server log file, when you start the server and do not specify a port number:

```
Trying to start TCPIP link ...
Unable to start on default port; starting on port
49152 instead
TCPIP link started successfully
Now accepting requests
...
Server started successfully
```

**Not enough memory on Windows** If the IQ server will not start on a 32-bit Windows system, make sure you have enabled the Microsoft 4GT RAM Tuning feature, if appropriate for your version of Windows server. The 4GT option configures the Windows operating system at boot time to allow the allocation of up to 3GB of dynamic memory for a user process. See the “System requirements” section in the chapter “Installing Sybase IQ” in the *Sybase IQ Installation and Configuration Guide for Windows* for a list of supported Windows platforms and details on enabling the 4GT feature.

**Environment variables are not set correctly** If your database configuration file parameters differ from those used by `start_asiq`, make sure the correct parameters are used to start the server.

**You cannot run `start_asiq`** If you cannot run the `start_asiq` command and you normally use a configuration file or other command line switches, try starting the server using only `start_asiq` with the server name and database name. If the server starts with this simple command, then the problem is probably caused by one or more of the switches or parameters entered on the command line or in the configuration file. Try to isolate which parameter or switch is preventing the server from starting.

If the server does not start with the most basic `start_asiq` command, try starting the `asiqdemo` demo database using your configuration file and command line switches. If the server starts with the `asiqdemo` database, there may be a problem with your database. Refer to the section “Database connection issues” on page 13.

If you still cannot run the `start_asiq` command, use the Start Database Server utility in Sybase Central or the `asiqsr12` command.

Before running `asiqsr12`, you must perform the following tasks (which `start_asiq` normally does for you):

- Remove all limits, and then set limits on the stack size and descriptors. To do so, go to the C shell and issue these commands:

```
% unlimited
% limit stacksize 8192
% limit descriptors 4096
```

---

**Note** Be aware that `unlimit` affects soft limits only. You must change any hard limits by setting kernel parameters.

---

- Be careful to set all server options appropriately for your platform. For details about appropriate options and how to set them in a configuration file, see the *Sybase IQ Installation and Configuration Guide*.

For any database created with a relative pathname, you must start the database server from the directory where the database is located.

Note what directory you are in when you start the server. The server startup directory determines the location of any new database files you create with relative pathnames. If you start the server in a different directory, Sybase IQ cannot find those database files.

Any server startup scripts should change directory to a known location before issuing the server startup command.

Syntax for `asiqsr12` is as follows:

```
asiqsr12 -n server-name -gm number
[ other-server-switches ] [ database-file [ database-switches ] ]
```

---

**Note** On the `asiqsr12` command line, the last option specified takes precedence, so if you want to override your configuration file, list any options you want to change *after* the configuration file name. For example:

```
asiqsr12 @asiqdemo.cfg -x 'tcpip{port=1870}' asiqdemo
```

The `-x` parameter here overrides connection information in the `asiqdemo.cfg` file.

---

When you start the server with the `asiqsv12` command, it does not run in the background, and messages do not automatically go to the server log. However, if you include the `-o filename` server switch, messages are sent to the named file in addition to the server window.

If the server fails to start when you run the `asiqsv12` command, then attempt to start again using the `asiqsv12` utility with minimal switches and parameters. For example:

```
asiqsv12 -n <servername> <dbname>.db -c 32m
-gd all -gl all
```

If the server starts with the minimum parameters and switches, then one of the parameters or switches normally used to start the server may be causing a problem. Try to isolate which parameter or switch is preventing the server from starting.

Chapter 2, “Running Sybase IQ” and Chapter 3, “Sybase IQ Connections” in the *Sybase IQ System Administration Guide* for more information on server startup, including the section “Troubleshooting startup, shutdown, and connections.”

## Sybase IQ stops processing or stops responding

Possible causes

The following are the two most common causes of server unresponsiveness, which can be detected by looking in the IQ message file:

- Insufficient disk space. See the section “Insufficient disk space” on page 17 for actions to take.
- Insufficient room in main or temp buffer cache. See “Managing buffer caches” in Chapter 4, “Managing System Resources” of the *Sybase IQ Performance and Tuning Guide*.

Action

If your server seems to be prone to unresponsiveness, either while processing or during shutdown, use the `start_asiq` command line option `-z` and the IQ database option `QUERY_PLAN = 'ON'` to log useful information in the IQ message (`.iqmsg`) and server log (`.srvlog`) files. In addition to logging this information, there are other steps you can take to determine the cause of the problem:

- Check both the IQ message file and the server log file for “You have run out of ... dbspace” messages. If you have run out of IQ STORE (main) or IQ TEMPORARY STORE, add the appropriate dbspace with the `CREATE DBSPACE` command. See the section “Insufficient disk space” on page 17 for more information on resolving out of space issues.

Setting the database options `MAIN_RESERVED_DBSPACE_MB` and `TEMP_RESERVED_DB_SPACE_MB` to large enough values to handle running out of space during a `DDL COMMIT` or `CHECKPOINT` is also important. A few hundred MB should be enough, but these options can be set higher for a large database. For more information, see the sections “Handling out-of-space conditions for DDL commands” and “Reserving space to handle out-of-space conditions” in Chapter 5, “Working with Database Objects” of the *Sybase IQ System Administration Guide*.

- Determine if the IQ server process (`asiqsrvt12`) is consuming CPU cycles by monitoring the CPU usage for a few minutes at the operating system level. Record this information. If the CPU usage changes, then the IQ server process should be processing normally.

If the IQ server CPU usage is normal, you can examine what the server is doing, i.e., what statement the server is currently executing. For details on capturing this information and logging server requests, see the sections “Finding the currently executing statement” on page 37 and “Logging server requests” on page 37.

- If there are no out of space indications, use `dbisql` on a new or existing connection to gather the information listed in the following table (in this order).

**Table 1-1: Information to gather for server unresponsiveness**

| Command  | Informational purpose         |
|--|-------------------------------|
| <code>select db_name()</code>                                | database name                 |
| <code>checkpoint</code>                                      | checkpoint can succeed        |
| <code>select db_property('FileVersion')</code>               | version of catalog            |
| <code>set temporary option truncation_length=100</code>      | increase output line length   |
| <code>sa_conn_properties &gt;# sa_conn_properties.out</code> | connection information        |
| <code>sa_conn_info &gt;# sa_conn_info.out</code>             | connection information        |
| <code>sa_db_properties &gt;# sa_db_properties.out</code>     | database property information |
| <code>sa_eng_properties &gt;# sa_eng_properties.out</code>   | server property information   |
| <code>sp_iqstatus &gt;# sp_iqstatus.out</code>               | database status information   |
| <code>sp_iqconnection &gt;# sp_iqconnection.out</code>       | connection information        |
| <code>sp_iqtransaction &gt;# sp_iqtransaction.out</code>     | transaction information       |

If you cannot resolve this issue, contact Sybase Technical Support for assistance. The information you have just gathered can be used by Technical Support to help diagnose the problem. See the section “Reporting problems to Technical Support” on page 40.

- When the server is unresponsive, you can generate a stack trace for each IQ thread by creating a file named *DumpAllThreads* or *dumpallthreads* in the *\$ASDIR/logfiles* directory (the *%ASDIR%\logfiles* folder on Windows platforms).

Starting Sybase IQ as recommended, using the Program Manager or *start\_asiq* command, sets the *ASDIR* variable automatically. If the *ASDIR* variable is not set, create the *DumpAllThreads* file in the directory in which *asiqsrv12* was started.

The IQ server detects the presence of the *DumpAllThreads* file and writes a stack trace for each IQ thread in the stack trace file *stktrc-YYYYMMDD-HHNNSS\_#.iq*. After the stack traces are written to the stack trace file, the *DumpAllThreads* file is deleted.

This stack trace information can be used by Sybase Technical Support to help diagnose the problem. See the section “Reporting problems to Technical Support” on page 40.

- If you can connect to the database, run the IQ UTILITIES buffer cache monitor on the main and temp (private) buffer caches for 10 minutes with a 10 second interval:

a Connect to the database or use the existing connection.

b `CREATE TABLE #dummy_monitor(c1 INT);`

c `IQ UTILITIES MAIN INTO #dummy_monitor START MONITOR  
'-append -debug -interval 10 -file_suffix iqdbgmon';`

d `IQ UTILITIES PRIVATE INTO #dummy_monitor  
START MONITOR '-append -debug -interval 10  
-file_suffix iqdbgmon';`

Let the process run for 10 minutes, then stop the buffer cache monitor:

e `IQ UTILITIES MAIN INTO #dummy_monitor STOP MONITOR;`

f `IQ UTILITIES PRIVATE INTO #dummy_monitor STOP  
MONITOR;`

For more information on monitoring buffer caches, see the section “Monitoring the buffer caches” in Chapter 5, “Monitoring and Tuning Performance” of the *Sybase IQ Performance and Tuning Guide*.

- Check near the end of the IQ message file for the message "Resource count 0", which may be followed by an "Open Cursor" message. These messages indicate a resource depletion, which can cause a deadlock. The immediate solution is to reduce the number of active connections using CTRL-C or the DROP CONNECTION command.

The long term solution to avoid a deadlock due to resource depletion is one or a combination of the following:

- Restrict the number of users on the server by reducing the value of the -gm server startup option
- Add another query server to a multiplex
- Increase the processing capacity of the hardware by adding CPUs

## Server fails to shut down

Normally you should be able to shut down the server by running the dbstop utility or stop\_asiq, by typing `q` in the server window on UNIX, or by clicking Shutdown on the server window on Windows. If none of these methods works, see the Actions section below.

Possible causes

Various.

Actions

On UNIX systems:

- 1 Capture `ps` operating system utility output, so you can submit this output to Sybase Technical Support. On Sun Solaris two different `ps` options are available. Use both.

```
ps -aAdeflclj | egrep "PPID|asiqsrv12"
/usr/ucb/ps -awwwlx | egrep "PPID|asiqsrv12"
```

- 2 Try to kill the process at the operating system level to generate a core dump.

```
kill -6 pid
```

A small core file is created in the directory where `start_asiq` was run. If you are able to kill the server process in this way, skip to step 5.

- 3 If the server process still does not exit, capture `ps` output as in step 1. Retain the output from both times you run `ps` (before and after trying to kill the process). Then kill the process with a stronger signal:

```
kill -9 pid
```

- 4 If this method does not cause the process to exit, capture yet another set of ps output, and then reboot your system.
- 5 Submit all ps output, the core file (if generated in step 2), and the stack trace in *stktrc-YYYYMMDD-HHNNSS\_#.iq* to Sybase Technical Support.

On Windows systems:

- 1 Start the Task Manager by right-clicking the Task Bar and clicking Task Manager.
- 2 In the Processes tab, select *asiqsvr12.exe* and then click the End Process button to stop the database server.
- 3 If necessary, restart Windows.

Refer to the section “Reporting problems to Technical Support” on page 40 for a full list of information to provide to Sybase Technical Support.

## System failure/Sybase IQ failure

Possible causes

Various.

Actions

- Copy or rename the message log file (*dbname.iqmsg*) before trying to restart the database. This ensures that any useful information in the file will not be lost.
- On UNIX, send a copy of the stack trace to Sybase Technical Support, along with the additional information listed in the section “Reporting problems to Technical Support” on page 40. The stack trace should be in the directory where you started the database server, in a file named *stktrc-YYYYMMDD-HHNNSS\_#.iq*. If the database was open when the failure occurred, the stack trace should also be in the IQ message log (default name *dbname.iqmsg*). This information helps Sybase Technical Support determine why the failure occurred.
- Restart the server with the *start\_asiq* command. When the database restarts, recovery occurs automatically.
- Try to start the server without starting a database. If you are able to start the server but not the database, check that database parameters are specified correctly on the startup line and/or in the connection profile.
- If you query Catalog Store tables extensively, restart the server and make sure that the *TEMP\_SPACE\_LIMIT\_CHECK* option is ON. With this option setting, if a connection exceeds its quota of Catalog Store temporary file space it receives a non-fatal error.

## Database connection issues

This section contains information on issues you may encounter when attempting to connect to a database.

### Cannot connect to a database

Possible causes

- Data source is not defined, or you have entered or defined it incorrectly. A data source is a set of connection parameters, stored in the registry (on Windows) or in a file (Windows and UNIX).
- An incorrect user name or password is specified. The error messages returned are:

`Unable to connect`

or

`Could not connect to the database.`

followed by the message:

`Invalid user ID or password.`

Try connecting again with the correct user ID and password.

- User may not have permission to use the database.
- You provide an incorrect database file name. The error messages returned are:

`Unable to connect`

or

`Could not connect to the database.`

followed by the message:

`Specified database not found.`

Try connecting again with the correct database file name.

- Database files may be missing. The files *dbname.db*, *dbname.iq*, *dbname.iqmsg*, and *dbname.iqtmp* (where *dbname* is the name of the database) must all exist.
- A limit on the number of connections or other DBA-defined login restrictions may be exceeded. The error messages returned are:  

```
Unable to connect
Database server connection limit exceeded.
```
- You have run out of disk space. Check the IQ message file for messages related to disk space.
- The server name specified is not correct. The error messages returned are:  

```
Connection failed.
Database server not running.
```

Check the name of the server and try connecting again with the correct server name.

- The server machine name or address has changed.
- When connecting from a client for the first time and the server name is not specified, providing the wrong port number can cause a failure to connect to the database. The error messages returned are:

```
Connection failed.
Database server not running.
```

Either provide the server name when connecting, or use the correct port number. To determine the server name and the number of the port on which the server is listening, run the command `stop_asiq`, which displays this information.

- Port number may be out of correct range or in use by another process.
- If you receive the message

```
Unable to start - server not found
```

or

```
Database server not running.
```

when trying to start the client, the client cannot find the database server on the network. The connection string may be incorrect or the server name cache may contain incorrect or old connection information. For example, if the server is started with a different port number, even if the client application specifies the new port number at connect time, the connection information is still taken from the server name cache.

The server name cache is a file named *asasrv.ini* in the IQ executable directory that contains server connection information and is used for faster connections over a network. You can modify the server name cache to contain the new port number or you can completely remove the server entry from the file. For more information on the server name cache, see the section “Server name caching for faster connections” in Chapter 3, “Sybase IQ Connections” of the *Sybase IQ System Administration Guide*.

- You specified a character set in the CharSet connection parameter and tried to connect to a server that does not support that character set. If the server does not support the requested character set, the connection fails.  
Try reconnecting without specifying CharSet. If the client's local character set is unsupported by the server, the connection succeeds, but with a warning that the character set is not supported.

---

**Note** Do not confuse an inability to connect to a database with an IQ server-level error while Sybase IQ is trying to open a database.

---

**Action**

If you suspect that you cannot connect because there is a problem with the database, you can look in the *dbname.iqmsg* file to determine where the problem occurred. If the message “Open Database Completed” appears, then the database opened without error and the problem is related to the clients connecting. If the message does not appear, then the database may have failed while opening or recovering.

## Multiplex issues

This section contains information on troubleshooting issues related to multiplex functionality.

### Main dbspace count differs on write and query servers

**Possible causes** Sybase Central may fail executing a CREATE DBSPACE command on a query server, causing the main dbspace count from a query server to differ from the count on the write server.

Trying to start the query server where the CREATE DBSPACE failed returns the error:

```
Query Server dbspace count differs from Write Server
```

In this case, executing sp\_iqmpxvalidate on the write server returns a message like the following:

```
ERROR: Main dbspace counts for server UXIQIP393, write  
server mismatch in SYS.SYSIQFILE
```

CREATE DBSPACE may also fail on a query server if the file system permissions for a shared raw disk device are wrong at the query server, or if the pathname does not resolve to the same device where the write server created the dbspace.

**Actions** The following actions resolve the problem:

- Use Sybase Central to drop the query server and add it to the multiplex again, or
- Use the stored procedure sp\_iqmpxaliasdbspace on the write server interactively to create the necessary dbspace definitions for the query server, and then synchronize the query server.

### dbisql/dbisqlc issues

This section contains information on troubleshooting issues related to the operation of dbisql and dbisqlc.

## dbisqlc window does not work on UNIX

|                 |   |
|-----------------|---|
| Possible causes | <ul style="list-style-type: none"><li>• Differences in display characteristics between your terminal and the expectations of Sybase IQ.</li><li>• Differences in function key support between your terminal and the expectations of Sybase IQ.</li></ul>  |
| Action          | Install, and if necessary edit, the terminfo extension (.tix) file provided with Sybase IQ. This file contains the definitions of function keys and special key sequences. See the section “Connecting to databases from DBISQL” in Chapter 3, “Running and Connecting to Servers” of the manual <i>Introduction to Sybase IQ</i> for more information on installing the terminfo extension file. |

## Directories remain after exiting dbisql

---

**Note** this issue affects users of NFS file systems only.

---

|                 |  |
|-----------------|--|
| Possible causes | <p>The ASTMP environment variable is not set to point to a local directory.</p> <p>Each client connection creates several directories and files in a temporary directory. Sybase IQ deletes these files when the connection ends. If ASTMP does not point to a local directory, it cannot find the .nfs* files that NFS creates.</p> |
| Action          | Set ASTMP to a local directory and restart the server.   |

## Resource issues

This section contains information on troubleshooting resource issues, including insufficient disk space, insufficient number of threads, thread stack overflow, and unused system resources.

### Insufficient disk space

---

**Warning!** If Sybase IQ holds certain system locks or is performing a checkpoint when you run out of disk space, you may not be able to add disk space. For this reason, recognizing when you are low on disk space and adding a new dbspace *before* you run out of space are important.

For an example of using an event handler to monitor disk space usage, see the section “Monitoring disk space usage” on page 20.

---

Actions

- Check recent messages in the IQ message log (*dbname.iqmsg*). If you see an “out of dbspace” message, you must add another dbspace. The message in the IQ message file indicates which dbspace has run out of space and the minimum number of megabytes to add. If the problem occurs while you are inserting data, you probably need more room in the IQ Store. If the problem occurs during queries with large sort/merges, you probably need more room in the Temporary Store.

Check the IQ message log for the following message:

```
You have run out of { IQ STORE | IQ TEMPORARY STORE } dbspace
in database <dbname>. In another session, please issue a
CREATE DBSPACE ... { IQ STORE | IQ TEMPORARY STORE } command and
add a dbspace of at least nn MB.
[MSG_IQSTORE_OUTOFDISK_HEADER: 'QSB31',1009131].
```

- Try to connect to the database from a new connection. If this works, you know that the database server is running, even though the query is waiting. Run `sp_iqstatus` to get more information.
- If you cannot connect to the database, check if Sybase IQ is in an unusable state by monitoring the CPU usage for that processor. If the CPU usage does not change over a small time interval, then IQ is probably not operational. If the CPU usage does change, IQ is operational.
- Check the `sp_iqstatus` output for the following two lines:

```
Main IQ Blocks Used: ,10188 of 12288, 82%, Max Block#: 134840
Temporary IQ Blocks Used: ,163 of 6144, 2%, Max Block#: 97
```

If the percentage of blocks used is in the nineties, you need to add more disk space with the `CREATE DBSPACE` command. In this example, 82% of the Main IQ Blocks and 2% of the Temporary IQ Blocks are used, so more space will soon be needed in the Main IQ Store.

Effect of checkpoints on out of disk space conditions

If Sybase IQ has already run out of space when a checkpoint is requested, the checkpoint command fails with the error:

```
You have run out of space during the CHECKPOINT operation.
[MSG_IQSTORE_OUTOFSPACE_CHECKPOINT: 'QSB33',-1009133].
```

You must add a dbspace before any new checkpoints can succeed.

Adding space if you cannot connect to a server

If you run out of space during an operation and are unable to add space because you cannot connect to the server, you must:

- 1 Shut down the database server using any of these methods:
  - On any platform, run `dbstop`.

- On Windows, click the correct server icon on the Windows task bar to display the Sybase IQ window, and then click the Shutdown button.
- On UNIX, run `stop_asiq` or type `q` in the window where the server was started.

If the server does not shut down, see “Server fails to shut down” below.

- 2 Restart the engine with the `start_asiq` command.
- 3 Connect to the database.
- 4 Use the `CREATE DBSPACE` command to add space.
- 5 Rerun the operation that originally failed due to insufficient space.

#### Managing dbspace size

Growth of catalog files is normal and varies depending on application and catalog content. The size of the `.db` file does not affect performance, and free pages within the `.db` file are reused as necessary. To minimize catalog file growth:

- Avoid using `IN SYSTEM` on `CREATE TABLE` statements.
- Issue `COMMIT` statements after running system stored procedures.
- Issue `COMMIT` statements after long-running transactions

If the Catalog Store cannot extend one of its files (`.tmp`, `.db`, or `.iqmsg`), IQ returns the error `A dbspace has reached its maximum file size`. To prevent this problem:

- Monitor space usage periodically.
- Verify that there are no operating system file size limits (such as Sun Solaris `ulimit`) where the `.tmp`, `.db`, or `.iqmsg` files are located. The `.db` and `.tmp` files are typically in the main IQ database directory. The `.tmp` file is located under `$ASTMP/<servername>/tmp`, or if `$ASTMP` is not set, under `/tmp/.SQLAnywhere/<servername>/tmp`.

#### Adding the wrong type of space

If the temporary dbspace runs out of space and you accidentally omit the temporary keyword in the `create dbspace` command, the `create dbspace` command waits for you to add space to the temporary dbspace.

To provide the temporary dbspace needed by the `create dbspace` command, connect to the database from a new connection and create the temporary dbspace. Once the temporary dbspace is created, the `create dbspace` for main completes and all waiting connections resume running.

|                                |  |
|--------------------------------|--|
|                                | <p>The same is true, if the main dbspace runs out of space and you attempt to add temporary dbspace. IQ waits for you to add space to main first, before adding to the temporary dbspace. You must add space to the dbspace that runs out of space first, and IQ ensures this sequence.</p>  |
| Fragmentation                  | <p>Sybase IQ provides control over fragmentation by taking advantage of even the smallest unused spaces. However, fragmentation can still occur. If your database runs out of space, even though Mem Usage listed by <code>sp_iqstatus</code> or the <code>.iqmsg</code> file shows Main IQ Blocks Used is less than 100%, it usually indicates that your database is fragmented,</p>  |
| Freeing space                  | <p>Note that when a connection is out of space, freeing space by dropping tables or indexes in another connection is not possible, because the out of space transaction will see those objects in its snapshot version.</p>  |
| Monitoring disk space usage    | <p>Recognizing when the server is low on disk space and adding a new dbspace <i>before</i> the server runs out of space is important. See the section “Monitoring disk space usage” on page 20 for an example of using an event handler to monitor disk space usage and to notify you when available space is low.</p>   |
| Reserving space for the future | <p>To ensure that you have enough room to add new dbspaces if you run out of space in the future, set the database options <code>MAIN_RESERVED_DBSPACE_MB</code> and <code>TEMP_RESERVED_DBSPACE_MB</code>. Set these options large enough to handle running out of space during a <code>COMMIT</code> or <code>CHECKPOINT</code>. See Chapter 2, “Database Options” in the <i>Sybase IQ Reference Manual</i> for details.</p> |

## Monitoring disk space usage

You can use an event handler to monitor disk space usage and notify you when available space is running low. The example in this section is especially useful for monitoring space during loads. You can enable the event handler before you start the load and disable the event handler after the load completes.

The following is sample event handler code. You can modify this code to perform other types of monitoring.

```
-- This event handler sends email to the database
-- administrator whenever the IQ Main DBSpace is more than
-- 95 percent full.

-- This event handler runs every minute. The event handler uses
-- sp_iqspaceused to sample the space usage. If the space is
-- more than 95 percent full, a file that contains the date and
-- time is created in the directory where asiqsrvt2 is
-- running. The file contents are then mailed to the database
-- administrator and the file is removed.
```

```

-- This event can be enabled before a load and be used
-- to monitor disk space usage during loading. The event can
-- then be disabled after the load.

create event out_of_space
schedule
start time '1:00AM' every 1 minutes
handler

begin
declare mt unsigned bigint;
declare mu unsigned bigint;
declare tt unsigned bigint;
declare tu unsigned bigint;

call sp_iqspaceused(mt, mu, tt, tu);

if mu*100/mt > 95 then
  call xp_cmdshell('date > ./temp_m_file');
  call xp_cmdshell('mailx -s add_main_dbSPACE iqdba@iqdemo.com
    < ./temp_m_file');
  call xp_cmdshell('/bin/rm -rf ./temp_m_file');
end if

if tu*100/tt > 95 then
  call xp_cmdshell('date > ./temp_file');
  call xp_cmdshell('mailx -s add_temp_dbSPACE iqdba@iqdemo.com
    < ./temp_file');
  call xp_cmdshell('/bin/rm -rf ./temp_file');
end if

end

```

For more information on using events, see Chapter 18, “Automating Tasks Using Schedules and Events” in the *Sybase IQ System Administration Guide*. For details on the SQL statements that create, modify, and control events, see “CREATE EVENT statement”, “ALTER EVENT statement”, and “TRIGGER EVENT statement” in Chapter 6, “SQL Statements” of the *Sybase IQ Reference Manual*.

## Insufficient threads

Possible cause                      The query you have issued requires more kernel threads for the IQ Store.

- Actions
- Wait for another query to finish and release the threads it is using. Then resubmit your query.
  - Run the system stored procedure `sp_iqconnection`. The column `IQThreads` contains the number of IQ threads currently assigned to the connection. This column can help you determine which connections are using the most resources. Remember that some threads may be assigned but idle.
  - If the condition persists, you may need to restart the server and specify more IQ threads. Use the `-iqmt` server startup switch to increase the number of processing threads that Sybase IQ can use. The default value of `-iqmt` is  $60 * \text{numCPU} + 2 * \text{num\_conn} + 1$ . The total number of threads (`-iqmt` plus `-gn`) must not exceed 4096 on 64-bit platforms, 1000 on IBM AIX 32-bit servers, or 2048 on all other 32-bit platforms. This option is set automatically to 450 by the `start_asiq` startup utility on the IBM AIX platform.

## Stack overflow

Possible cause If you see the error `AbortIfEndofStack` in the stack trace file (`stktre-YYYYMMDD-HHNNSS_#.iq`), the thread stack has overflowed.

- Actions
- To avoid this problem, restart Sybase IQ with the server parameter `-iqtss` set to 300 on 32-bit operating systems or 500 on 64-bit operating systems. On 32-bit systems, you may need to decrease `LOAD_MEMORY_MB` in order to increase `-iqtss`. The server startup switch `-iqtss` specifies thread stack size in KB. If this is not adequate, raise the value of `-iqtss` by 72 until the problem is solved.
  - If possible, identify the command that caused the error and forward it to Sybase Technical Support.

## Unused semaphores and shared memory left after abnormal exit

Possible causes Killing processes on UNIX systems may result in semaphores or shared memory being left behind instead of being cleaned up automatically. To eliminate unneeded semaphores, you should periodically run the UNIX `ipcs` command to check the status of semaphores and shared memory.

The `ipcs -a` command lists the ID numbers, owners, and create times of semaphores and shared memory segments. When all Sybase IQ instances are started by the same user (as Sybase recommends), you can search the `OWNER` column for that user name. Identify shared memory segments and semaphores that are not being used.

**Action** After verifying with the owner that these shared memory segments and semaphores are not in use, run the UNIX `ipcrm` command to remove them. Use the `-m` parameter to specify the memory segment ID and the `-s` command to specify the semaphore ID number, in the following format:

```
ipcrm -m mid1 -m mid2 ... -s sid1 -s sid2 ...
```

For example:

```
% ipcrm -m 40965 -s 5130 -s36682
```

## Processing issues

This section contains information on troubleshooting processing issues related to loads, queries, indexes, and table access.

For information on monitoring disk space usage during loads, see “Monitoring disk space usage” on page 20.

### Too many indexes on table

**Possible cause** A Microsoft Access user is trying to link to a table that has more than 32 indexes.

**Action** Create a view that selects all the columns in the table, and link to the view instead of the base table.

**See also** Chapter 8, “Using Views” in *Introduction to Sybase IQ*.

### Unexpectedly long loads or queries

- Possible causes**
- IQ buffer cache is too large, so the operating system is thrashing.
  - IQ buffer cache is too small, so Sybase IQ is thrashing because it cannot fit enough of the query data into the cache.
  - You attempted to set IQ buffer cache sizes so that total memory requirements on your system exceed total system memory. The buffer caches were therefore automatically reduced to their default sizes.
  - User defined functions or cross database joins requiring CIS intervention.
  - Missing HG or LF index on columns used in the WHERE clause and GROUP BY clause.

**Action** Monitor paging to determine if thrashing is a problem.

- To monitor IQ paging, run the IQ buffer cache monitor, as described in the *Sybase IQ Performance and Tuning Guide* section “Monitoring the buffer caches” in Chapter 5, “Monitoring and Tuning Performance.”
- To monitor operating system paging, use the UNIX vmstat utility or other platform specific tools, or the Windows Performance Monitor.

Reset your buffer sizes as needed. See the section “Monitoring the buffer caches” in Chapter 5, “Monitoring and Tuning Performance” of the *Sybase IQ Performance and Tuning Guide*.

If you monitor paging and determine that thrashing is a problem, you can also limit the amount of thrashing during the execution of a statement which includes a query that involves hash algorithms. Adjusting the HASH\_THRASHING\_PERCENT database option controls the percentage of hard disk I/Os allowed before the statement is rolled back and an error is returned.

The default value of HASH\_THRASHING\_PERCENT is 10%. Increasing HASH\_THRASHING\_PERCENT permits more paging to disk before a rollback and decreasing HASH\_THRASHING\_PERCENT permits less paging before a rollback.

Queries involving hash algorithms that executed in earlier versions of IQ may now be rolled back when the default HASH\_THRASHING\_PERCENT limit is reached. The error "Hash insert thrashing detected." or "Hash find thrashing detected." (SQLState QFA43, SQLCode -1001047) is reported. Take one or more of the following actions to provide the query with the resources required for execution:

- Relax the paging restriction by increasing the value of HASH\_THRASHING\_PERCENT.
- Increase the size of the temporary cache (DBA only). Keep in mind that increasing the size of the temporary cache reduces the size of the main cache.
- Attempt to identify and alleviate why IQ is misestimating one or more hash sizes for this statement.
- Decrease the value of the database option HASH\_PINNABLE\_CACHE\_PERCENT.

To identify possible problems with a query, generate a query plan by running the query with the temporary database options `QUERY_PLAN = 'ON'` and `QUERY_DETAIL = 'ON'`, then examine the estimates in the query plan. The option `QUERY_PLAN_AFTER_RUN = 'ON'` provides additional information, as the query plan is printed after the query has finished running. The generated query plan is in the message log file.

## Load fails on number of unique values

Possible cause

The following message in the log file indicates that you have more than 10000 unique values in a column with an LF index:

```
1009103: Number of unique values exceeded for index.
index_name_LF 10000
```

The Low\_Fast index is optimized for 1000 unique values, but has an upper limit of 10000.

Action

Replace the LF index with an HG index.

To do this, issue a `DROP INDEX` statement to drop the LF index identified in the error message. For example:

```
DROP INDEX DBA.employee.emp_lname_LF
```

Then issue a `CREATE INDEX` statement to create the new HG index. For example:

```
CREATE HG INDEX ON DBA.employee (emp_lname)
```

## Cannot write to a locked table

Possible causes

The following error message is reported, when an attempt is made to write to an object to which another user already has write access.

```
Cannot open the requested object for write in the
current transaction (TxnID1). Another user has write
access in transaction TxnID2.
```

|          |  |
|----------|--|
| Action   | <p>Use the <code>sp_iqlocks</code> stored procedure to identify users who are blocking other users from writing to a table. This procedure displays information about locks currently held in the database, including the connection and user ID that holds the lock, the table on which the lock is held, the type of lock, and a name to identify the lock.</p> <p>The error message also includes the transaction ID of the user who is attempting to write (TxnID1) and the transaction ID of the user who is currently writing (TxnID2). If you need more detailed information about the transaction that has locked the table, run the <code>sp_iqtransaction</code> stored procedure.</p> |
| See also | <p>Chapter 9, “System Procedures” in the <i>Sybase IQ Reference Manual</i> and “Managing write lock contention on a table” on page 26.</p>   |

## Managing write lock contention on a table

High contention for write locks on a table used by multiple users can impact processing, if most of the transactions are able to obtain the lock. The sample stored procedure in this section is an example of a method to manage the contention for a write lock on a table. This procedure does not eliminate the write lock contention on the table, but does manage the contention, so that transactions are able to get the write lock.

The following stored procedure code manages the lock contention on a table named `dbo.event` that is used to record events. The procedure returns the `event_id` to the caller. This table is in high contention for write locks. The stored procedure `dbo.log_event` records information in the table `dbo.event`. If an access error occurs, the error is captured, the hopeful writer sleeps for a five second interval, and then attempts to write to the table again. The five second re-try interval is usually long enough for the contention to be resolved, so the write lock on the `dbo.event` table is available.

You can modify this code to perform other similar tasks.

```
if exists (select 1
           from sys.sysprocedure a
           join sys.sysuserperm b on a.creator = b.user_id
           where a.proc_name = 'log_event' and b.user_name = 'dbo') then
    drop procedure dbo.log_event;
end if;

create procedure dbo.log_event(in @event varchar(255))
on exception resume
begin
    declare @event_id    bigint;
    declare @res         char(5);
```

```

set @event_id=0;
loop1: loop
    commit work;
    select max(event_id)+1
        into @event_id
        from dbo.event;
    insert dbo.event
        values (@event_id,@event,current timestamp,null,null);
    set @res=sqlstate;
    if @res = ' ' or(@res <> 'QDA29' and @res <> 'QDA11') then
        leave loop1
    end if;
    call dbo.sleep(5);
end loop loop1;
commit work;
return @event_id
end

```

**See also**

For more information on using stored procedures, see Chapter 8, “Using Procedures and Batches” in the *Sybase IQ System Administration Guide*.

For more information on locking and managing locks, see Chapter 10, “Transactions and Versioning” in the *Sybase IQ System Administration Guide*.

**Checkpoint hints**

The time between checkpoints defaults to 60 minutes. The time between checkpoints can be adjusted when you start your server by changing the `-gc` and `-gr` options in the `start_asiq` command or in the `dbname.cfg` configuration file. The `-gc` switch specifies the number of minutes for the checkpoint timeout period. The `-gr` switch specifies the number of minutes for the maximum recovery time. The database engine uses both switches to calculate the checkpoint time.

The default values for checkpoint time and recovery time are sufficient and do not need to be changed. If you are advised to change the values of `-gc` and `-gr`, see Chapter 1, “Running the Database Server” in the *Sybase IQ Utility Guide* for details on setting these server switches.

## Performance issues

This section notes a few settings that can impact performance. For complete information on diagnosing and resolving performance issues, see these chapters in the *Sybase IQ Performance and Tuning Guide*:

- To understand IQ memory, disk, and other resource use and their performance implications, see Chapter 4, “Managing System Resources”
- To use the IQ buffer cache monitor, see Chapter 5, “Monitoring and Tuning Performance”

### Slow performance on a multi-CPU or hyperthreaded machine

**Possible cause** Sybase IQ runs most efficiently when it knows how many physical CPUs are available to it. On a machine with hyperthreads turned on, or where IQ is unable to access all of the available CPUs, IQ will create too many threads and run less efficiently than it should.

**Action** Start the server with `-iqnumbercpus` set to the number of CPUs available to IQ, overriding the physical number of CPUs. For details, see the `-iqnumbercpus` server option in Chapter 1, “Running the Database Server” in the *Sybase IQ Utility Guide*.

## Sybase Central issues

This section contains information on troubleshooting issues related to the operation of Sybase Central.

### Some Sybase Central fields do not display

**Possible cause** System is using a dark background with white text.

**Action** Use the facilities your windowing system provides to change the Sybase Central display to use dark text on a white or light background.

## Troubleshooting network communications

The following sections are primarily for troubleshooting communications problems on Windows and with Windows-based clients.

Network software involves several different components, increasing the likelihood of problems. Although we provide some tips concerning network troubleshooting here, the primary source of assistance in network troubleshooting should be the documentation and technical support for your network communications software, as provided by your network communications software vendor.

Also see the section “Diagnostic tools” on page 34 for instructions on how to obtain information you can use in diagnosing various conditions, including those described in the following sections.

## Ensuring that you are using compatible protocols

If you have more than one protocol stack installed on the client or server computer, you should ensure that the client and the database server are using the same protocol. The `-x` command line switch for the server selects a list of protocols for the server to use, and the CommLinks connection parameter does the same for the client application.

You can use these options to ensure that each application is using the same protocol.

By default, both the database server and client library use all available protocol stacks. The server supports client requests on any active protocol, and the client searches for a server on all active protocols.

More information about the `-x` switch is in Chapter 1, “Running the Database Server” in the *Sybase IQ Utility Guide*.

## Ensuring that you have current drivers

Old network adapter drivers are a common source of communication problems. You should ensure that you have the latest version of the NDIS or ODI driver for your network adapter, as appropriate. You should be able to obtain current network adapter drivers from the manufacturer or supplier of the adapter card.

Network adapter manufacturers and suppliers make the latest versions of drivers for their cards available. Most card manufacturers have a Web site from which you can download the latest versions of NDIS and ODI drivers.

You may also be able to obtain a current network adapter driver from the provider of your networking software.

When you download Novell client software, ODI drivers for some network adapters are included in addition to the Novell software that is used for all network adapters.

## **Switching off your computer between reboots**

Some network adapter boards do not reset cleanly when you reboot the computer. When you are troubleshooting, turn the computer off, wait a few seconds, and then turn it back on between reboots.

## **Diagnosing your protocol stack layer by layer**

If you are having problems getting your client application to communicate with a database server, you need to ensure that the client and the database server are using compatible protocol stacks.

A helpful method of isolating network communication problems is to work up the protocol stack, testing whether each level of communication is working properly.

If you can connect to the server computer in any way, then the data link layer is working, regardless of whether the connection is made using the same higher-layer protocols you will be using for Sybase IQ.

For example, you may want to try to connect to a disk drive on the computer running the database server from the computer running the client application.

Having verified that the data link layer is working, the next step is to verify that other applications using the same network and transport layers as Sybase IQ are working properly.

## **Testing a NetBIOS protocol stack**

If you are using Windows 98 or Windows NT/2000/ME/XP, and you are using the native protocol, try using the chat or WinPopup application. This tests whether applications on the client and server computers can communicate with each other.

You should ensure that the applications that come with your networking software are running properly before testing Sybase IQ.

## Testing a TCP/IP protocol stack

If you are running under TCP/IP, there are several applications that you can use to test the compatibility of the client computer and server computer TCP/IP protocol stack. The ping utility provided with many TCP/IP packages is useful for testing the IP network layer.

Using ping to test the IP layer

Each IP layer has an associated address—a four-integer period-separated number (such as 191.72.109.12). Ping takes as an argument an IP address and attempts to send a single packet to the named IP protocol stack.

First, determine if your own protocol stack is operating correctly by "pinging" your own computer. For example, if your IP address is 191.72.109.12, enter:

```
ping 191.72.109.12
```

at the command line prompt and wait to see if the packets are routed at all. If they are, the output will appear similar to the following:

```
c:> ping 191.72.109.12
Pinging 191.72.109.12 with 32 bytes of data:
Reply from 191.72.109.12: bytes=32 time<.10ms TTL=32
Reply from 191.72.109.12: bytes=32 time<.10ms TTL=32
Reply from 191.72.109.12: bytes=32 time<.10ms TTL=32
...
```

If the ping works, then the computer is able to route packets to itself. This is reasonable assurance that the IP layer is set up correctly. Ask someone else running TCP/IP for their IP address and try pinging their computer.

Ensure that you can ping the computer running the database server from the client computer before proceeding.

Using Telnet to test the TCP/IP stack

To further test the TCP/IP stack, start a server application on one computer, and a client program on the other computer, and test whether they can communicate properly.

There are several applications commonly provided with TCP/IP implementations that can be used for this purpose. The following procedure shows how to use the telnet command to test the TCP/IP stack.

- 1 Start a Telnet server process (or **daemon**) on one machine. Check your TCP/IP software documentation to see how to do this. For a typical command line Telnet program, type the following instruction at the command prompt:

```
telnetd
```

- 2 Start the Telnet client process on the other machine, and see if you get a connection. Again, check your TCP/IP software documentation to see how to do this. For command line programs, you typically type the following instruction:

```
telnet server_name
```

where *server\_name* is the name or IP address of the computer running the Telnet server process.

If a Telnet connection is established between these two machines, the protocol stack is stable and the client and server should be able to communicate using the TCP/IP link between the two computers. If a Telnet connection cannot be established, there is a problem. You should ensure that your TCP/IP protocol stack is working correctly before proceeding.

## Diagnosing wiring problems

Faulty network wiring or connectors can cause problems that are difficult to isolate. Try recreating problems on a similar machine with the same configuration. If a problem occurs on only one machine, the issue may be a wiring problem or a hardware problem.

For information on detecting wiring problems under NetWare, see your Novell NetWare manuals. The Novell LANalyzer program is useful for diagnosing wiring problems with Ethernet or TokenRing networks. Your NetWare authorized reseller can also supply you with the name of a Certified NetWare Engineer who can help diagnose and solve wiring problems.

## Checking common network communications problems

For a description of network communications parameters, see the section “Network communications parameters” in Chapter 4, “Connection and Communication Parameters” of the *Sybase IQ System Administration Guide*.

The following list presents some common network communications problems and their solutions.

### “Unable to start — server not found” message

If you receive the message

```
Unable to start - server not found
```

when trying to start the client, the client cannot find the database server on the network. Check for the following problems:

- The network configuration parameters of your network driver on the client machine are different from those on the server machine. For example, two Ethernet adapter cards should be using a common frame type. For Novell NetWare, the frame type is set in the *net.cfg* file. Under Windows 98, Windows NT, and Windows 2000, the settings are accessed through the Control Panel Network Settings.
- Under the TCP/IP protocol, clients search for database servers by broadcasting a request. Such broadcasts typically do not pass through gateways, so any database server on a machine in another (sub)network, is not found. If this is the case, you must supply the host name of the machine on which the server is running using the `-x` server startup command-line option. This is required to connect to NetWare servers over TCP.
- Your network drivers are not installed properly or the network wiring is not installed properly.
- The network configuration parameters of your network driver are not compatible with Sybase IQ multi-user support.
- If your network communications are being carried out using TCP/IP and you are operating under Windows for Workgroups or Windows NT/2000/XP, check that your TCP/IP software conforms to the Winsock 1.1 standard.

### **“Unable to initialize any communication links” message**

If you receive the message

```
Unable to initialize any communication links
```

no link can be established. The probable cause is that your network drivers have not been installed. The server and the client try to start communication links using all available protocols, unless you have specified otherwise using the `-x` server startup option. Check your network documentation to find out how to install the driver you need to use.

## Diagnostic tools

This section tells how to obtain information you can use in diagnosing various conditions, including those described in the previous sections.

### The `sp_iqstatus` stored procedure

The `sp_iqstatus` stored procedure provides a variety of IQ status information.

The following output is from the `sp_iqstatus` stored procedure:

```
Adaptive Server IQ (TM)                Copyright (c) 1992-2004 by Sybase, Inc.
                                         All rights reserved.
Version:                                12.6.0/040810/P/GA/MS/
                                         Windows 2000/32bit/2004-08-10 09:54:19
Time Now:                               2004-08-11 18:53:34.274
Build Time:                             2004-08-10 09:54:19
File Format:                             23 on 03/18/1999
Server mode:                             IQ Server
Catalog Format:                           2
Stored Procedure Revision:                1
Page Size:                               131072/8192blksz/16bpp
Number of DB Spaces:                     1
Number of Temp Spaces:                   1
DB Blocks: 1-5632                        IQ_SYSTEM_MAIN
Temp Blocks: 1-2816                      IQ_SYSTEM_TEMP
Create Time:                             2004-08-03 14:14:06.124
Update Time:                             2004-08-03 14:14:26.687
Main IQ Buffers:                         127, 16Mb
Temporary IQ Buffers:                    95, 12Mb
Main IQ Blocks Used:                     4541 of 5632, 80%=35Mb, Max Block#: 5120
Temporary IQ Blocks Used:                 65 of 2816, 2%=0Mb, Max Block#: 0
Main Reserved Blocks Available:           512 of 512, 100%=4Mb
Temporary Reserved Blocks Available:      256 of 256, 100%=2Mb
IQ Dynamic Memory:                       Current: 41mb, Max: 41mb
Main IQ Buffers:                         Used: 4, Locked: 0
Temporary IQ Buffers:                    Used: 4, Locked: 0
Main IQ I/O:                             I: L168/P2 O: C2/D16/P15 D:0 C:100.0
Temporary IQ I/O:                       I: L862/P0 O: C136/D150/P17 D:132 C:100.0
Other Versions:                           0 = 0Mb
Active Txn Versions:                     0 = C:0Mb/D:0Mb
```

The following is a key to understanding the Main IQ I/O and Temporary IQ I/O output codes:

- I: Input
- L: Logical pages read (“Finds”)
- P: Physical pages read
- O: Output
- C Pages Created
- D Pages Dirtied
- P: Physically Written
- D: Pages Destroyed
- C: Compression Ratio

Check the following information:

- The lines `Main IQ Blocks Used` and `Temporary IQ Blocks used` tell you what portion of your dbspaces is in use. If the percentage of blocks in use (the middle statistic on these lines) is in the high nineties, you need to add a dbspace.
- The lines `Main IQ Buffers` and `Temporary IQ Buffers` tell you the current sizes of your main and temp buffer caches.
- `Other Versions` shows other db versions and the total space consumed. These versions will eventually be dropped when they are no longer referenced or referencable by active transactions.
- `Active Txn Versions` shows the number of active write transactions and the amount of data they have created and destroyed. If these transactions commit, the “destroyed” data will become an old version and eventually be dropped. If they rollback, the “created” data will be freed.
- `Main Reserved Blocks Available` and `Temporary Reserved Blocks Available` show the amount of reserved space that is available.
- The lines `Main IQ I/O` and `Temporary IQ I/O` display I/O status in the same format as in the IQ message log. For an explanation of these statistics, see the section “Main buffer cache activity message” in Chapter 7, “Moving Data In and Out of Databases” of the *Sybase IQ System Administration Guide*.

## The sp\_iqcheckdb stored procedure

If you suspect problems in your database, try running the stored procedure `sp_iqcheckdb`. This procedure reads every database page from disk into memory and does various consistency checks. However, depending on the size of your database, the check can take a long time to run.

The `sp_iqdbstatistics` stored procedure displays the database statistics collected by the most recent execution of the `sp_iqcheckdb` procedure.

For more information on running and using the `sp_iqcheckdb` and `sp_iqdbstatistics` stored procedures, see “Database verification” in Chapter 2, “System Recovery and Database Repair.”

## Checking database and server startup option values

When diagnosing server startup, resource, or processing issues, you may need to check the current values of database options and server startup options. For the connected user, the `sp_iqcheckoptions` stored procedure displays a list of the current value and the default value of database options that have been changed from the default. `sp_iqcheckoptions` also lists server startup options that have been changed from the default values.

When `sp_iqcheckoptions` is run, the DBA sees all options set on a permanent basis for all groups and users and sees temporary options set for DBA. Non-DBA users see their own temporary options. All users see non-default server startup options.

The `sp_iqcheckoptions` stored procedure requires no parameters. In Interactive SQL, run the following command:

```
sp_iqcheckoptions
```

The system table `DBA.SYSOPTIONDEFAULTS` contains all of the names and default values of the IQ and ASA options. You can query this table, if you need to see all option default values.

For more information, see “`sp_iqcheckoptions` procedure” in Chapter 9, “System Procedures” and “Finding option settings” in Chapter 2, “Database Options” of the *Sybase IQ Reference Manual*.

## Finding the currently executing statement

When diagnosing a problem, you may want to know what statement was executing when the problem occurred. The `sp_iqcontext` stored procedure tells you what statements are running on the system when you run the procedure, and identifies the user and connection that issued the statement. You can use this utility together with information provided by `sp_iqconnection`, the `.iqmsg` log, and the `-zr` SQL log, as well as stack traces, to determine what was happening when a problem occurred.

For details and sample output, see “`sp_iqcontext` procedure” in Chapter 9, “System Procedures” of the *Sybase IQ Reference Manual*. To match `.iqmsg` log and the `-zr` SQL log entries using connection information, see “Correlating connection information” on page 43.

## Logging server requests

For isolating some types of problems, especially problems with queries, logging server requests is helpful. You can enable request-level logging in two ways:

- By setting the `-zr` command-line option when you start the server.
- By calling the `sa_server_option` stored procedure, which overrides the current setting of the `-zr` command-line option.

Server requests are logged in the server log file `*.srvlog`. The `-zr` server startup option enables request-level logging of operations and sets the type of requests to log (`ALL`, `NONE`, or `SQL`). The `-zo` option redirects request-level logging information to a file separate from the regular log file and `-zs` limits the size of this file.

You can enable and disable request-level logging without restarting the IQ server using the `sa_server_option` stored procedure. The following commands enable request-level logging of a limited set of requests and redirect the output to the file `sqllog.txt`:

```
call sa_server_option('request_level_logging','SQL');
call sa_server_option('request_level_log_file',
                    'sqllog.txt');
```

The following command disables request-level logging:

```
call sa_server_option('request_level_log_file','');
```

To view the current settings for the SQL log file and logging level, execute the following statement:

```
select property('RequestLogFile'),
       property('RequestLogging');
```

To match *.iqmsg* log and the -zr SQL log entries using connection information, see “Correlating connection information” on page 43.

The following output shows the limited requests that are logged, when the server is started with the -zr SQL option. In this example, the user connects to the *asiqdemo* database, executes the command

```
SELECT * FROM customer
```

then disconnects. In the server log, each line is preceded by a datetime stamp, which has been removed from this sample output.

```
REQUEST conn: 1182240 CONNECT

```

For more information on request-level logging, see the section “Server command-line options” in Chapter 1, “Running the Database Server” of the *Sybase IQ Utility Guide* and “sa\_server\_option system procedure” in Chapter 9, “System Procedures” of the *Sybase IQ Reference Manual*.

## Connection for collecting diagnostic information

The database option `DEDICATED_TASK` lets the DBA dedicate a request handling task to handling requests from a single connection. This pre-established connection allows you to gather information about the state of the database server if it becomes otherwise unresponsive. For more information, see “`DEDICATED_TASK` option” in *Sybase IQ Reference Manual*.

## Diagnosing communications issues

If your server is having communications problems, you may want to set the `-z` command-line option when you start the server. This switch provides diagnostic information on communications links at server startup.

## Reporting problems to Technical Support

Each Sybase installation that has purchased a support contract has one or more designated people who are authorized to contact Sybase Technical Support. If you cannot resolve a problem using the manuals or online help, the designated person should contact Sybase Technical Support or the Sybase subsidiary in your area.

Technical Support needs information about your IQ environment in order to resolve your problem. This section describes this information, tells you how to collect it using the automated `getiqinfo` tool, and explains how to correlate information in various IQ utilities and log files.

## Collecting diagnostic information using `getiqinfo`

Sybase IQ includes a script for collecting information that Sybase Technical Support needs to diagnose problems. The `getiqinfo` script collects information about the operating system environment, the IQ environment, and log files.

Run this script before reporting a problem to Sybase Technical Support. By doing so, you can help Sybase staff resolve your issue more quickly, with less effort on your part.

The `getiqinfo` script automatically collects all of the information discussed in “Reporting problems to Technical Support” on page 40, as well as other information that may be needed to resolve your issue.

The `getiqinfo` script is not designed for troubleshooting IQ installations and does not provide on-site troubleshooting facilities. This script executes successfully only when the IQ environment is properly set up and the server is running.

Before you run  
`getiqinfo`

Have the following information ready before running the script:

- Location of the database file

- Full path of the configuration file used to start the server, if one is used
- Full path of the *.iqmsg* file, if the IQ message file has been renamed

If possible, leave the IQ server running, or start the server before running *getiqinfo*. This allows the script to collect internal database data that is only available when IQ is running. The script does not automatically start the server.

The script runs with the same environment settings that are used to start the IQ server. *getiqinfo* uses some IQ-specific environment variables to search for files.

The script puts collected data in the current directory (where you start the program). Be sure you have enough space under that directory. The script does not prompt for an alternative, but you can modify the script to change the output location by resetting the variable *DEST\_DIR*.

Running the *getiqinfo* script

On UNIX platforms, *getiqinfo* is a shell script. On Windows platforms, *getiqinfo.bat* is a batch script in the *ASIQ-12\_6\win32* directory.

#### ❖ To run *getiqinfo*:

The steps vary for UNIX and Windows platforms.

- 1 Start the script according to your platform:
  - At the UNIX command prompt, in the *ASIQ-12\_6/bin* directory, type:
 

```
getiqinfo.sh
```
  - In the Windows menu, enter Start → Run → *<install\_path>\ASIQ-12\_6\win32\getiqinfo.bat*.
- 2 As the program prompts you, enter:
  - The directory of the database file. This is also the default location of the *.iqmsg* file, and the *stkrc\*.iq* file on UNIX.
  - The base name of the database file (the file name without the *.db* suffix). This is also the default base name of the *.iqmsg* file.
  - Other directories to search for these files
  - IQ engine name (server name) and port number for this database server
  - User ID and password with DBA privileges for this database
  - The full path to the configuration file used to start the IQ server, if one was used

- The full path to the output file in the `-zo server` option, if one was specified

The program also directs you to send the listed files to Sybase Technical Support.

## Information collected by `getiqinfo`

The `getiqinfo` script collects all of the following information:

- Type of hardware, amount of memory, CPU type, speed, number of CPUs
- Operating system (for example, Sun Solaris 2.9)
- Operating system patch level
- Swap space size
- IQ version and EBF level, and Anywhere version
- Stack trace file for the date and time this problem occurred, named *stktrc-YYYYMMDD-HHMMSS\_#.iq*, in the directory where you started the database server. (UNIX and Linux platforms only)
- Command or query that produced the error
- Message log file, named *dbname.iqmsg*, located by default in the directory where you started the database server.
- Query plan (recorded in *.iqmsg* file; see the Note below)
- Server logs
  - For UNIX, *ASIQ-12\_6/logfiles/<servername>.00n.stderr* and *ASIQ-12\_6/logfiles/<servername>.00n.srvlog*
  - On Windows platforms, if needed, you must restart the server and manually collect a copy of the console window.
- Startup and connection option settings, from the configuration file (by default, *dbname.cfg*)
- Database option settings and output from `sa_conn_properties` (if the server is still running)

On multiplex databases, you must execute `getiqinfo` on the write server and/or query servers, and the following information is also collected:

- *servername.out* on query servers

- `write_server_name/repDirs/logfiles/servername.dbrlog` on the write server

The following information is not collected by `getiqinfo`, but may also be requested by Technical Support:

- Connectivity protocol used (for example, ODBC, JDBC, TDS)
- Open Client version
- Configuration type (single user or multi-user)
- Front end tool used (for example, Brio Query)
- Schema and indexes for the database
- Output from `sp_iqcheckdb` procedure

A checklist for recording information that Technical Support may need is provided at the end of this chapter, in the unlikely event that you need to collect this information manually.

---

**Note** Query plan detail is collected automatically by `getiqinfo` if the options below are set. You can also collect this information manually, by setting the options and then rerunning the command that produced the error.

```
SET TEMPORARY OPTION QUERY_PLAN = 'ON'  
SET TEMPORARY OPTION QUERY_DETAIL = 'ON'
```

The plan will be in the message log file. The default for databases created as of Version 12.5 is `Query_Plan = ON`, and `Query_Detail = OFF`.

If you have performance problems, set the following option:

```
SET TEMPORARY OPTION QUERY_PLAN_AFTER_RUN = 'ON'
```

This will enable technical support to see which steps in the query processing used the time.

---

## Correlating connection information

Technical Support may ask you to set the `-zr` option on the `start_asiq` command in your configuration file. This server startup option sets the request logging level to track statements sent to the server. Parameters are `ALL`, `NONE`, or `SQL`. The option produces a log file named for the database, with the suffix `.zr`. In the log file, each connection to the server is identified by a connection handle.

Because the connection handle is not unique, Sybase IQ assigns its own IQ connection ID, which is displayed in the IQ message file. The IQ message file records the errors, warnings, and tracing information for each connection. Because the two files use different identifiers for the connections, you cannot compare the *.zr* output with the *.iqmsg* file and easily locate information for a particular connection.

The following procedure tells how to correlate the identifiers in the two files to find relevant information. For example, assume that the *.zr* output file is *example.zr* and the IQ message file is *example.iqmsg*.

❖ **To correlate connection information between the *.zr* and *.iqmsg* files:**

- 1 In the *.zr* file, locate a connection of interest, for example:

```
.conn: 240215640
```

For example, on a UNIX system:

```
grep 240215640 example.zr | grep CONNECT
```

```
04/19 06:42:06.690 ** REQUEST conn: 240215640 CONNECT
04/19 06:42:07.204 ** DONE      conn: 240215640 CONNECT      Conn=569851433
04/19 06:46:17.646 ** REQUEST conn: 240215640 DISCONNECT
04/19 06:46:17.670 ** DONE      conn: 240215640 DISCONNECT
```

- 2 In the same line, find the number that follows Conn=. In this example:

```
Conn=569851433
```

- 3 Search the *.iqmsg* file for “Connection handle is” followed by that number. For example:

```
grep 569851433 example.iqmsg
```

```
2004-09-19 07:46:57 0000000002 Connection handle is : 569851433. SA
connID: 2.User Name is : DBA.
```

The IQ connection handle in this example is 000000002.

- 4 Isolate all the lines from the *.iqmsg* file for that connection:

```
grep ' 0000000002 ' example.iqmsg
```

## **Another source of helpful information**

If you are unable to resolve a problem, you may find additional help on the Sybase online support Web site, MySybase. MySybase lets you search through closed support cases, latest software bulletins, and resolved and known problems, using a view customized for your needs. You can even open a Technical Support case online.

MySybase can be used from most Internet browsers. Point your Web browser to Technical Documents at <http://www.sybase.com/support/techdocs/> and click MySybase for information on how to sign up for and use this free service.

MySybase can be used from most Internet browsers. Point your Web browser to Technical Documents at <http://www.sybase.com/support/techdocs/> and click MySybase for information on how to sign up for and use this free service.

## Checklist: information for Technical Support

| Information requested  | Value |
|--|-------|
| type of hardware   |       |
| amount of memory   |       |
| number of CPUs   |       |
| operating system name and version<br>(e.g., Sun Solaris 2.8 (SPARC))                             |       |

| sp_iqstatus output   |       |
| query plan: set options (Query_Plan, Query_Detail, Query_Plan_After_Run), rerun command or query |       |

# System Recovery and Database Repair

When you restart the database server, Sybase IQ attempts to recover automatically. If the server is unable to recover and restart, especially after a system failure or power outage, the database may be inconsistent. This chapter describes what happens during normal recovery, how to verify database consistency, how to repair database inconsistencies, and special recovery modes. Topics include:

- Normal recovery
- Database verification
- Database repair
- Special recovery modes
- Emergency recovery without a transaction log
- Handling unrepairable problems

## Recovery and repair overview

If your Sybase IQ server or database encounters problems while restarting, you can use the information in this chapter to diagnose database startup problems, verify the consistency of databases, and repair databases. If you are able to restart the server after a failure, Sybase recommends that you verify your database, preferably before allowing users to connect. You verify databases using the `sp_iqcheckdb` stored procedure, as described in this chapter.

If you have trouble starting a server or database, if the database starts but users are unable to connect to it, or if problems are found during database verification, you may need to perform a forced recovery or restore the database.

Examining the server log and IQ message log

The remainder of this chapter explains how to determine when you need to perform each of these functions. This chapter provides details on database verification, forced recovery, leaked space recovery, and index repair. For details on restoring databases, see Chapter 14, “Backup and Data Recovery” in the *Sybase IQ System Administration Guide*.

In order to determine what type of recovery or repair is needed, you need information from your server log (*servername.nnn.srvlog*) and IQ message log (*dbname.iqmsg*). Be sure to retain this information so you can provide it to Sybase Technical Support, if necessary.

For example, if data inconsistency is detected, the *dbname.iqmsg* file may include detailed information that can aid in determining the cause of the problem.

## Normal recovery

During system recovery, any uncommitted transactions are rolled back and any disk space used for old versions (snapshots of database pages that were being used by transactions that did not commit) is returned to the pool of available space. At this point, the database contains only the most recently committed version of each permanent table, unless it is a multiplex database. A multiplex database contains all versions accessible to query servers. For more information on versioning, see Chapter 10, “Transactions and Versioning” in the *Sybase IQ System Administration Guide*.

During recovery from a system failure or normal system shutdown, Sybase IQ reopens all connections that were active. If the `-gm` option, which sets the number of user connections, was in effect at the time of the failure, you need to restart the IQ server with at least as many connections as were actually in use when the server stopped.

## Database verification

Check the consistency of your database as soon as possible after the server restarts following an abnormal termination, such as a power failure. Database consistency should also be checked before performing a backup of the database. In both of these cases, you can use the `sp_iqcheckdb` stored procedure to detect and repair database consistency problems.

This section describes using `sp_iqcheckdb` for database verification. The section “Database repair” contains details on using `sp_iqcheckdb` to repair the consistency problems detected.

## The `sp_iqcheckdb` stored procedure

The IQ Database Consistency Checker (DBCC) performs database verification and repair functions. The `sp_iqcheckdb` stored procedure, in conjunction with server startup options, is the interface to DBCC. You select the different modes of check and repair by specifying an `sp_iqcheckdb` command string. `sp_iqcheckdb` reads every database page and checks the consistency of the database, unless you specify otherwise in the command string.

---

**Note** Run `sp_iqcheckdb` only on the write server of an IQ multiplex. If you run `sp_iqcheckdb` on a multiplex query server, an error is returned.

---

DBCC has three different modes that perform increasing amounts of consistency checking and a repair mode for repairing inconsistent indexes. Each mode checks all database objects, unless individual tables and indexes are specified in the `sp_iqcheckdb` command string. If you specify individual table names, all indexes within those tables are also checked.

---

**Note** The `sp_iqcheckdb` stored procedure does not check referential integrity or repair referential integrity violations.

---

`sp_iqcheckdb` syntax

The following command line shows the basic syntax of `sp_iqcheckdb`.

```
sp_iqcheckdb 'mode target [...] [resources resource-percent]'
```

*mode:*

```
{ allocation | check | verify } | repair
```

*target:*

```
database | database resetclocks | { table table-name | index index-name [...] }
```

If both mode and target are not specified in the parameter string, IQ returns the error message “At least one mode and target must be specified to DBCC.”

The *index-name* parameter may contain owner and table qualifiers: [owner.]table-name.index-name. If *owner* is not specified, current user and database owner (dbo) are substituted in that order. If *table* is not specified, then *index-name* must be unique.

The *table-name* parameter may contain an owner qualifier: [owner.]table-name. If *owner* is not specified, current user and database owner (dbo) are substituted in that order. *table-name* cannot be a temporary or pre-join table.

---

**Note** The `sp_iqcheckdb` parameter string must be enclosed in single quotes and must not be greater than 255 bytes in length.

If either the table name or the index name contains spaces, enclose the *table-name* or *index-name* parameter in double quotes, as shown in this example:

```
sp_iqcheckdb 'check index "dbo.ss tab.i2" resources 75'
```

---

Refer to the section “`sp_iqcheckdb` procedure” in Chapter 9, “System Procedures” of the *Sybase IQ Reference Manual* for the complete syntax of `sp_iqcheckdb`.

The following table summarizes the actions and output of the four `sp_iqcheckdb` modes.

**Table 2-1: `sp_iqcheckdb` modes: actions and output**

| Mode       | Errors detected                        | Output                     | Speed           |
|------------|--|----------------------------|-----------------|
| allocation | allocation errors                      | allocation statistics only | 4TB per hour    |
| check      | allocation errors<br>most index errors | all available statistics   | 60GB per hour   |
| verify     | allocation errors<br>all index errors  | all available statistics   | 15GB per hour   |
| repair     | all index errors                       | repair statistics          | 15+GB per hour* |

\* The processing time of `sp_iqcheckdb` repair mode depends on the number of errors repaired.

#### DBCC performance

The execution time of DBCC varies according to the size of the database for an entire database check, the number of tables or indexes specified, and the size of the machine. Checking only a subset of the database, i.e., only specified tables or indexes, requires less time than checking an entire database. Refer to the table in the previous section for processing times of the `sp_iqcheckdb` modes.

For the best DBCC performance, you should be as specific as possible in the `sp_iqcheckdb` command string. Use the 'allocation' or 'check' verification mode when possible and specify the names of tables or indexes, if you know exactly which database objects require checking.

`sp_iqcheckdb check mode`

In check mode, `sp_iqcheckdb` performs an internal consistency check on all IQ indexes and checks that each database block has been allocated correctly. All available database statistics are reported. This mode reads all data pages and can detect all types of allocation problems and most types of index inconsistencies. Check mode should run considerably faster than verify mode for most databases.

When to run in check mode:

- If metadata, null count, or distinct count errors are returned when running a query

Examples of check mode:

**Table 2-2: `sp_iqcheckdb` check mode examples**

| Command  | Description   |
|--|---|
| <code>sp_iqcheckdb 'check database'</code>     | Internal checking of all tables and indexes in the database |
| <code>sp_iqcheckdb 'check table t1'</code>     | Default checking of all indexes in table t1                 |
| <code>sp_iqcheckdb 'check index t1c1hg'</code> | Internal checking of index t1c1hg                           |

`sp_iqcheckdb verify mode`

In verify mode, `sp_iqcheckdb` performs an intra-index consistency check, in addition to internal index consistency and allocation checking. All available database statistics are reported. The contents of each non-FP index is verified against its corresponding FP index(es). Verify mode reads all data pages and can detect all types of allocation problems and all types of index inconsistencies.

When to run in verify mode:

- If metadata, null count, or distinct count errors are returned when running a query

Examples of verify mode:

**Table 2-3: `sp_iqcheckdb` verify mode examples**

| Command   | Description                                    |
|---|--|
| <code>sp_iqcheckdb 'verify database'</code>     | Verify contents of all indexes in the database |
| <code>sp_iqcheckdb 'verify table t1'</code>     | Verify contents of all indexes in table t1     |
| <code>sp_iqcheckdb 'verify index t1c1hg'</code> | Verify contents of index t1c1hg                |

---

**Note** If you check individual non-FP indexes in check mode, the corresponding FP index(es) are automatically verified with internal consistency checks and appear in the DBCC results.

---

sp\_iqcheckdb  
allocation mode

In allocation mode, sp\_iqcheckdb checks that each database block is allocated correctly according to the internal physical page mapping structures (blockmaps). Database statistics pertaining to allocation are also reported. This mode executes very quickly. Allocation mode, however, does not check index consistency and cannot detect all types of allocation problems.

When to run in allocation mode:

- After forced recovery, run sp\_iqcheckdb with the -iqdropkls server switch to reset the allocation map (must use database as the target)
- To check for duplicate or unowned blocks (use database or specific tables or indexes as the target)
- If you encounter page header errors

Examples of allocation mode:

**Table 2-4: sp\_iqcheckdb allocation mode examples**

| Command                                | Description                            |
|--|--|
| sp_iqcheckdb 'allocation database'     | Allocation checking of entire database |
| sp_iqcheckdb 'allocation table t1'     | Allocation checking of table t1        |
| sp_iqcheckdb 'allocation index t1c1hg' | Allocation checking of index t1c1hg    |

The DBCC option resetclocks is used only with allocation mode. The resetclocks option is used in conjunction with forced recovery to convert a multiplex query server to a write server. resetclocks corrects the values of internal database versioning clocks, in the event that these clocks are behind. Do not use the resetclocks option for any other purpose, unless you contact Sybase IQ Technical Support.

The resetclocks option must be run in single user mode and is only allowed with the DBCC command 'allocation database'. resetclocks does not require the -iqdropkls server startup switch. The syntax of the resetclocks command is:

```
sp_iqcheckdb 'allocation database resetclocks'
```

See the section “Replacing write servers” on page 72 for more information on converting a multiplex query server to a write server.

**sp\_iqcheckdb repair mode**

The repair mode of `sp_iqcheckdb` performs detailed index checking and can repair many types of index inconsistencies. Allocation checks are not performed during repair mode. The DBCC output indicates which indexes, if any, were repaired. You must issue a `COMMIT` command to commit changes from repair mode to make them permanent. After DBCC repairs an index, you should run `sp_iqcheckdb` again in check mode before committing any changes. If an index is still inconsistent, drop and recreate the index.

When to run in repair mode:

- If index errors are reported in `sp_iqcheckdb` check or verify mode

Examples of repair mode:

**Table 2-5: `sp_iqcheckdb` repair mode examples**

| Command   | Description                                  |
|---|--|
| <code>sp_iqcheckdb 'repair database'</code>     | Detailed check and repair of entire database |
| <code>sp_iqcheckdb 'repair table t1'</code>     | Detailed check and repair of table t1        |
| <code>sp_iqcheckdb 'repair index t1c1hg'</code> | Detailed check and repair of index t1c1hg    |

---

**Note** There is currently no support for repairing join indexes.

---

*You should back up the database before executing `sp_iqcheckdb` in an index repair mode.*

## sp\_iqcheckdb output

The output of `sp_iqcheckdb` consists of an extensive list of statistics and any errors reported by DBCC. Only non-zero values are displayed. Lines containing errors are flagged with asterisks (\*\*\*\*\*). Note that if you encounter errors, some of the statistics reported by DBCC may be inaccurate.

See the section “DBCC error messages” on page 76 for the full list of DBCC error messages.

The output of `sp_iqcheckdb` is always copied to the IQ message file (`.iqmsg`). To redirect the `sp_iqcheckdb` output to a file, enter the following command:

```
sp_iqcheckdb ># file_name
```

where `file_name` is the name of the file to receive the output.

When the DBCC\_LOG\_PROGRESS option is ON, sp\_iqcheckdb sends progress messages to the IQ message file. These messages allow the user to follow the progress of the sp\_iqcheckdb procedure as it executes.

The following is sample progress log output of the command sp\_iqcheckdb 'check database'

```

IQ Utility Check Database
Start CHECK STATISTICS table: tloansf
Start CHECK STATISTICS for field: aqsn_dt
Start CHECK STATISTICS processing index:
ASIQ_IDX_T444_C1_FP
Start CHECK STATISTICS processing index:
tloansf_aqsn_dt_HNG
Done CHECK STATISTICS field: aqsn_dt
    
```

**Future Version Errors**

If you see the message “DBCC Future Version Errors,” a DDL operation has been performed since the DBCC transaction began. DBCC continues to process the remaining tables, but leaked block checking is not performed and statistics do not include the tables that were skipped.

To avoid DBCC Future Version errors, execute the COMMIT command before you run sp\_iqcheckdb.

The following DBCC output indicates a Future Version error:

```

=====|=====|=====
DBCC Verify Mode Report|          |
=====|=====|=====
** DBCC Future Version Errors|1        |*****
    
```

**Sample output of valid database**

The following is an example of running sp\_iqcheckdb in verify mode. No errors are detected, there is no leaked space, the database allocation is consistent, and all indexes are consistent.

The command line for this example is sp\_iqcheckdb 'verify database'. Note that DBCC verifies all indexes, but the index verification output shown here is abbreviated.

Each index that DBCC determines to be consistent is marked as verified in the result set.

```

          Stat                               Value                               Flags

```
===== |===== |=====
...

```

The DBCC output also contains extensive statistical information grouped under headings such as Container Statistics, Buffer Manager Statistics, Catalog Statistics, Connection Statistics, and Compression Statistics. You can see an example of the available statistics by executing the command `sp_iqcheckdb 'verify database'` after connecting to the Sybase IQ demonstration database `asIQdemo`.

## Resource issues running `sp_iqcheckdb`

If you experience a resource problem while running `sp_iqcheckdb`, you may see one the following messages in the `sp_iqcheckdb` output or in the `.iqmsg` file:

- `Out of memory and DBCC Out of Memory Errors` You do not have enough memory for this operation. You may need to prevent other IQ operations or other applications from running concurrently with the `sp_iqcheckdb` stored procedure.
- `No buffers available and DBCC Out of Buffers Errors` The DBA may need to increase the buffer cache size.

Buffer cache sizes are set permanently using the database options `MAIN_CACHE_MEMORY_MB` and `TEMP_CACHE_MEMORY_MB`. The server startup switches `-iqmc` and `-iqtc` can be used to override the buffer cache size values set using the database options. See the section “Setting buffer cache sizes” in Chapter 4, “Managing System Resources” of the *Sybase IQ Performance and Tuning Guide* for information on using both the database options and the server startup switches to set buffer cache sizes.

You should not run multiple database consistency checks at the same time, as DBCC is optimized to run one instance.

The CPU utilization of DBCC can be limited by specifying the `sp_iqcheckdb` parameter `resources resource-percent`, which controls the number of threads with respect to the number of CPUs. The default value of `resource-percent` is 100, which creates one thread per CPU and should match the load capacity of most machines. Set `resource-percent` to a value less than 100 to reduce the number of threads, if you are running DBCC as a background process. The minimum number of threads is 1.

If `resource-percent > 100`, then there are more threads than CPUs, which may increase performance for some machine configurations.

The database option `DBCC_PINNABLE_CACHE_PERCENT` can be used to tune DBCC buffer usage. The default of `DBCC_PINNABLE_CACHE_PERCENT` is to use 50% of cache. For more information on the `DBCC_PINNABLE_CACHE_PERCENT` option, see Chapter 2, “Database Options” in the *Sybase IQ Reference Manual*.

## Database repair

DBCC can repair both index inconsistencies and allocation problems. The `sp_iqcheckdb` repair mode is used to repair indexes. The `sp_iqcheckdb` allocation mode is used in conjunction with the database server startup option `-iqdroppls` to repair allocation problems.

The repair mode of DBCC can repair many types of index inconsistencies. Repair mode is invoked using the `repair` keyword in the `sp_iqcheckdb` command string. No special server startup options are needed for `sp_iqcheckdb` to fix index problems. The DBCC output indicates which indexes, if any, were repaired. Allocation checks are not performed in repair mode.

Allocation problems can be repaired by starting the database server with the `-iqdroppls` option and running `sp_iqcheckdb 'allocation database'`. This is the only DBCC command allowed with the `-iqdroppls` switch. If DBCC detects index inconsistencies while attempting allocation repair, an error is generated and allocation problems are not fixed.

See the section “Leaked space recovery” on page 70 for specific information on recovering leaked blocks, which are blocks that are allocated, but not used.

## Analyzing index errors

This section describes how to analyze index inconsistencies using `sp_iqcheckdb`, shows the DBCC output when index problems are detected, and describes the DBCC errors related to index problems.

Sample of output with inconsistent index

The following is an example of the type of output you see when you run `sp_iqcheckdb` and there is index inconsistency. DBCC displays both a summary and details about the indexes checked. The Index Summary section at the top of the report indicates if any inconsistent indexes were found. The names of the inconsistent indexes and the type(s) of problems can be found in the index statistics section. The lines with asterisks (\*\*\*\*\*) contain information about inconsistent indexes.

Extra, missing, or duplicate RID errors are the most common types of errors reported. These errors are an indication that the index is misrepresentative of the data and may give incorrect results or cause other failures. These errors are generally accompanied by other errors indicating the specifics of the inconsistencies.

In this example, DBCC reports an inconsistent HNG index. DBCC repairs indexes using data from the FP indexes. Since the corresponding FP index checks are good, the FP index can be used to repair the damaged HNG index.

The command line executed for this example is `sp_iqcheckdb 'verify database'`.

Note that DBCC produces a detailed report, but some lines of the output have been removed in this example.

| Stat                        | Value                             | Flags |

**DBCC index errors**

Messages in the DBCC output related to problems with indexes are listed in the following table. See the section “DBCC error messages” on page 76 for a more extensive list of DBCC messages.

**Table 2-6: DBCC index errors**

| <b>DBCC message</b>   | <b>Description/action</b>  |
|---|--|
| Inconsistent Index Count  | The number of indexes that DBCC found to have inconsistencies.   |
| Inconsistent Index  | The name of an index that DBCC found to be inconsistent.   |
| Extra Index RIDs<br>Missing Index RIDs<br>Duplicate Index RIDs  | The total number of rows that are inconsistent for all inconsistent indexes.   |
| Bitmap Verify Errors  | The total number of inconsistent bitmaps in all database objects   |
| FP Lookup Table Inconsistencies   | An unrepairable error, where the 1-byte or 2-byte FP is internally inconsistent.   |
| Non-Completed Index Count   | The number of indexes that could not be verified, because an exception occurred while checking.  |
| Non-Completed Index   | The name of an index that was not verified because an exception occurred while checking. If the exception is a future version, out of memory, or out of buffers error, commit the DBCC connection and re-run DBCC. |
| VDO Incorrect First Available Fields<br>VDO Incorrect Next Available Fields<br>VDO Incorrect Used Count Fields<br>VDO Incorrect In-use Bitvec<br>VDO Incorrect In-use Bitmap<br>VDO Incorrect Partial Bitmap<br>VDO Incorrect Deleted Bitmaps | Unrepairable errors that can cause entire tables to be inaccessible. You must force drop the inconsistent table to resolve these errors.   |
| HG Missing Groups<br>HG Extra Groups<br>HG Extra Keys<br>HG Missing Keys<br>B-Tree Invalid Item Count<br>B-Tree Invalid Item Count<br>G-Array Empty Page Errors<br>G-Array Bad Group Type Errors<br>G-Array Out of Order Group Errors         | High Group index specific errors.  |

## Repairing index errors

In repair mode, `sp_iqcheckdb` performs detailed index checks and can repair

many types of index inconsistencies. The DBCC output indicates which indexes, if any, were repaired. After DBCC repairs an index, you should run `sp_iqcheckdb` again in check mode before committing any changes. If an index is still inconsistent, drop and recreate the index as described in the section “Dropping inconsistent indexes, tables, or columns” on page 75, and then rebuild the index.

❖ **To repair index problems using DBCC:**

- 1 Run `sp_iqcheckdb` in repair mode to verify and repair the specified targets. For example, to check and repair the indexes on the table `t1`:

```
sp_iqcheckdb 'repair table t1';
```

- 2 Run the stored procedure `sp_iqcheckdb` again in verify mode. For example, to verify the indexes on table `t1` again:

```
sp_iqcheckdb 'verify table t1';
```

- 3 When `sp_iqcheckdb` completes, review the report for the repairs made to the database. You must issue a `COMMIT` command in order to commit the changes to the database. Commit the changes *only* if the second `sp_iqcheckdb` reports no errors. If an index is still inconsistent, drop and recreate the index.

DBCC index repair output

DBCC displays an Index Summary section at the top of the report, which lists the number of repaired and verified indexes. The Index Statistics section provides details about the indexes repaired. Lines containing information about repaired indexes are flagged with asterisks (\*\*\*\*\*). See the section “DBCC index errors” on page 59 for more information on DBCC output messages related to indexes.

In this example, DBCC repaired the inconsistent HNG index. The command line executed for this example is `sp_iqcheckdb 'repair database'`.

---

**Note** DBCC repair mode does verify all indexes, but does not check allocation or report allocation statistics. Some lines of the output have been removed in this example.

---

Recreating FP indexes

If an FP index is inconsistent, you may be able to rebuild the FP index from an HG or LF index on the same column. Recreate the FP index only if you are sure that the FP index is damaged (i.e., read errors).

If you specify an FP index in DBCC repair mode and a LF or HG index is present on the corresponding FP column, the FP index is recreated from the contents of that LF or HG index. Note that the FP index appears twice in the DBCC results, since the FP index verifies against the LF or HG after it is repaired.

When you recreate FP indexes, space for the original FP index is intentionally leaked. Use `sp_iqcheckdb` with the `-iqdroppls` server option to recover this space, as described in the section “Repairing allocation problems” on page 65.

```

DBCC index repair messages

Messages in the DBCC output related to repaired indexes are listed in the following table. See the section “DBCC error messages” on page 76 for a more extensive list of DBCC messages.

**Table 2-7: DBCC index repair messages**

| DBCC message   | Description/action  |
|--|---|
| Repaired Index Count   | The number of indexes that DBCC attempted to repair.            |
| Repaired Index   | The name of an index that DBCC has attempted to repair.         |
| Extra Index RIDs Repaired<br>Missing Index RIDs Repaired<br>Duplicate Index RIDs Repaired                    | The total number of rows repaired for all inconsistent indexes. |
| HG Missing Groups Repaired<br>HG Extra Groups Repaired<br>HG Extra Keys Repaired<br>HG Missing Keys Repaired | High Group index specific repair messages.                      |

Time required to run DBCC repair

The execution time of DBCC repair depends on the number of errors detected. If the number of errors reported is large, Sybase recommends dropping and recreating the index.

## Analyzing allocation problems

This section describes how to analyze allocation problems using `sp_iqcheckdb`, shows the DBCC output when allocation problems are detected, and describes the DBCC errors related to allocation problems.

The `-iqdropkls` server option is used in conjunction with `sp_iqcheckdb` to repair allocation problems. If the server is started with this option and `sp_iqcheckdb 'allocation database'` is executed, then allocation errors are repaired when DBCC completes. Although these changes are applied immediately, they are not persistent until a checkpoint completes.

The database maintains an allocation map, also known as a free list, which tracks the blocks that are in use by database objects. DBCC detects three types of allocation problems:

**leaked blocks** A leaked block is a block that is allocated according to the database allocation map, but is found not to be part of any database objects. DBCC can recover leaked blocks.

**unallocated blocks** An unallocated block is a block that is not allocated according to the database allocation map, but is found to be in use by a database object. DBCC can recover unallocated blocks.

**multiply owned blocks** A multiply owned block is a block that is in use by more than one database object. At least one of the structures involved contains inconsistent data. DBCC *cannot* repair this type of allocation problem. If you encounter this type of error, run DBCC again, specifying a list of indexes, until you identify the indexes that share the block. These indexes must then all be dropped to eliminate the multiply owned block. See the section “Dropping inconsistent indexes, tables, or columns” on page 75 for more information on dropping inconsistent indexes.

Sample of leaked space output

The following is an example of the output you see when you run `sp_iqcheckdb` and there is leaked space. Lines with asterisks (\*\*\*\*\*) contain information about allocation problems. In this example, DBCC reports 16 leaked blocks.

The command line executed for this example is `sp_iqcheckdb 'allocation database'`.

| Stat                        | Value           | Flags |

| =====                       |                 |       |

**DBCC allocation errors**

Allocation problems are reported in the output generated by DBCC with `sp_iqcheckdb` run in a verification mode. If the Allocation Summary section has values flagged with asterisks, such as “\*\* Blocks Leaked” or “\*\* Blocks with Multiple Owners,” then there are allocation problems.

Messages in the DBCC output related to allocation problems are listed in the following table. See the section “DBCC error messages” on page 76 for a more extensive list of DBCC messages.

**Table 2-8: DBCC allocation errors**

| <b>DBCC message</b>                                   | <b>Description/action</b>  |
|---|--|
| Block Count Mismatch                                  | This count always accompanies other allocation errors.   |
| Blocks Leaked<br>1st Unowned PBN                      | Blocks that were found not to be in use by any database object. Use <code>-iqdroplks</code> to repair. |
| Blocks with Multiple Owners<br>1st Multiple Owner PBN | Blocks in use by more than one database object. Drop the object that is reported as inconsistent.      |
| Unallocated Blocks in Use<br>1st Unallocated PBN      | Blocks in use by a database object, but not marked as in use. Use <code>-iqdroplks</code> to repair.   |

If the Allocation Summary lines indicate no problem, but the Index Summary section reports a value for “Inconsistent Index Count,” then this indicates one or more inconsistent indexes. See the section “Repairing index errors” on page 60 for information on repairing indexes.

## Repairing allocation problems

The following procedure uses `sp_iqcheckdb`, in conjunction with the `-iqdroplks` server startup option, to repair database allocation problems. Note that `sp_iqcheckdb 'allocation database'` is the only DBCC command allowed with the `-iqdroplks` switch.

❖ **To repair allocation problems using DBCC:**

- 1 Start the server with the `-iqdroplks` option and database name in the `start_asiq` command line. For example:

```
start_asiq -n my_db_server -x 'tcpip{port=7934}'
-gd dba -iqdroplks my_db /work/database/my_db.db
```

You specify the database name twice, first as a required option to `-iqdroppls` with no path (to specify the database in which to recover the leaked space), and again to specify the database to start.

Sybase strongly recommends that you start the IQ server with the `-gd` option set, to restrict server access to the DBA. Forced recovery operates in all modes, but restricted access gives the DBA greater control over inadvertent opening of the database.

- 2 Run the stored procedure `sp_iqcheckdb` in allocation mode:

```
sp_iqcheckdb 'allocation database'
```

If the allocation repair is successful, `sp_iqcheckdb` displays the message “Freelist Updated.” If errors are detected, `sp_iqcheckdb` returns the messages “Freelist Not Updated” and “Errors Detected.”

- 3 Stop the server after `sp_iqcheckdb` finishes. To stop the server, use `stop_asiq` on any platform or the shutdown button in the console window on Windows.
- 4 Restart the server using your usual method, without the `-iqdroppls` option.

After allocation problems are repaired, allocation statistics appear in the DBCC output with no errors. If allocation statistics are not in the DBCC output, check to be sure that `sp_iqcheckdb` was run in repair mode. If errors other than multiply owned block errors are in the DBCC output, check that the `-iqdroppls` server startup option was specified with the correct database name in the server command line options.

DBCC allocation  
repair output

DBCC displays an Allocation Summary section at the top of the report, which lists information about allocation usage. The Allocation Statistics section provides more details about the blocks. The DBCC output does not contain repair messages for the leaked blocks that have been recovered.

In this example, the server is started using the `-iqdroppls` option. The following commands are executed:

```
sp_iqcheckdb 'allocation database';  
checkpoint;
```

The `sp_iqcheckdb` output indicates no errors, so the checkpoint is executed.

Note that since DBCC check mode is used in this example to repair the allocation problems, all of the indexes are also checked for consistency. DBCC reports statistics that do not show in this abbreviated output.

| Stat                        | Value              | Flags |

## Special recovery modes

Sybase IQ helps ensure that your server can be started even with inconsistent recovery information, by providing a special forced recovery mode. Forced recovery can be used in conjunction with `sp_iqcheckdb` allocation repair to bring the database back to an operational state. These procedures are described in the following sections of this chapter:

- Starting a server in forced recovery mode
- Leaked space recovery
- Replacing write servers

### Starting a server in forced recovery mode

If a server fails to start with an exception or an assert during the opening of the database, then the server should be started with forced recovery. Forced recovery allows the server to start and recovers the database, if the allocation map or checkpoint information is inconsistent.

---

**Note** *Forced recovery should only be used when normal database recovery fails to restore the database to a running state.*

---

The `-iqfrec` server startup option is used to start the server in forced recovery mode. The database specified in the `-iqfrec` option is marked as in use and is restored to its last consistent state.

Forced database recovery differs from normal database recovery in these ways:

- **Forced recovery marks all storage within the database as in use.** In order to recover a potentially inconsistent allocation map, all storage within the database is marked as in use. You can use the server startup option `-iqdropkls` with the `sp_iqcheckdb` stored procedure to reset the allocation map to the correct state. For more details, see the sections “Leaked space recovery” on page 70 and “Recovering leaked space using forced recovery” on page 71.
- **Incremental backups are disabled.** After the database is opened in forced recovery mode, incremental backups are disabled. The next backup must be a full backup. Doing a full backup reenables incremental backups.

- **The forced recovery parameter applies to all opens of the database while the server is up.** Therefore, after the database is opened, the DBA needs to bring the server back down, and then restart the server without the forced recovery flag, to be sure that subsequent opens run in regular mode. Repeated opens of the database with forced recovery on do not harm the database, but could be confusing to the DBA. Each time you open the database in forced recovery mode, all the storage within the database is marked as in use.

If the server fails to start due to an allocation map or checkpoint problem, follow this procedure:

❖ **To start a server in forced recovery mode:**

- 1 Start the server with forced recovery (to mark all pages as used), using the `-iqfrec` server startup option in the `start_asiq` command. For example:

```
start_asiq -n my_server -x 'tcpip(port=7934}'
-gd dba -iqfrec my_db /database/my_db.db
```

---

**Warning!** You must specify the override startup switch (`-iqmpx_ov 1`) and start in single node mode (`-iqmpx_sn 1`) when starting a multiplex write server after any failure. Never use multiplex mode (the default) for recovery.

---

You specify the database name twice, once to specify the database undergoing forced recovery and once to specify the database to start. The `-iqfrec` server startup option requires the database name. Note that this is the *physical* database name, which is case sensitive. Do not use `select_dbname` to determine the database name, as it returns the logical name assigned by the `-n` startup option.

Sybase strongly recommends that you start the IQ server with the `-gd` option set, to restrict server access to the DBA. Forced recovery operates in all modes, but restricted access gives the DBA greater control over inadvertent opens of the database.

- 2 Stop the server after it has started successfully. To stop the server, use `stop_asiq` on UNIX or the shutdown button in the console window on Windows.
- 3 Start the server with the drop leaks option `-iqdroplks`. See the section “Leaked space recovery” on page 70 for more details.

```
start_asiq -n my_server -x "tcpip(port=2638)" -gd
dba
-iqdroplks my_db /database/my_db.db
```

- 4 Run `sp_iqcheckdb` in allocation mode to free up unallocated pages.  

```
sp_iqcheckdb 'allocation database';
```
- 5 Stop the server after `sp_iqcheckdb` finishes.
- 6 Restart the server using your usual method, without the `-iqfrec` and `-iqdroplks` options.

*If you are unable to start your server in forced recovery mode, contact Sybase Technical Support.*

Using forced recovery without a follow on `sp_iqcheckdb`

Running forced recovery starts the database in a valid, but fully allocated mode. In other words, you should be able to do all operations, but no permanent main dbspace is left. Before you do anything else, you must either recover the lost dbspace by running `sp_iqcheckdb` with the `-iqdroplks` flag, or add a new dbspace. Note that queries should also run successfully, since they do not need additional permanent dbspace; however, you cannot load, insert, or delete data.

---

**Warning!** Running queries without verifying the database will not cause any inconsistency in your data. However, if there is a problem in the data that caused the server to fail, the server could fail again or produce incorrect results.

---

See the sections “Leaked space recovery” and “Recovering leaked space using forced recovery” for details on using `sp_iqcheckdb` to reclaim lost or leaked space.

## Leaked space recovery

An allocation map is used by the server to determine if a page is in use or not in use within IQ. Either through system failure or as a result of opening a database with forced recovery, a database's allocation map may not reflect the true allocation of its usage. When this occurs, we say that the database has “leaked” storage or “leaked blocks.” In general, you need not be concerned about small numbers of leaked blocks. If you have many megabytes of leaked blocks, you probably want to recover that space.

Sybase IQ lets you recover leaked storage using the `-iqdroplks` server startup option in conjunction with the `sp_iqcheckdb` stored procedure. The `-iqdroplks` option allows `sp_iqcheckdb` to recover leaked storage space within the specified database.

When leaked storage is being recovered, other transactions that alter the allocation map are shut out. Such operations include checkpoints and commands that modify the database.

You can recover leaked storage and force recovery either at the same time or separately. To recover leaked space within a database without doing a forced recovery, follow the procedure in the section “Repairing allocation problems” on page 65. To recover leaked space within a database after doing a forced recovery, follow the procedure in the next section “Recovering leaked space using forced recovery”.

#### Recovering leaked space using forced recovery

If the procedure in the section “Repairing allocation problems” on page 65 fails to recover leaked storage, then use the following procedure to recover leaked storage.

#### ❖ To recover leaked space using forced recovery:

- 1 Start the server with the `-iqdroppls` and `-iqfrec` options in the `start_asiq` command. For example:

```
start_asiq -n my_db_server -x 'tcpip{port=7934}'
-gd dba -iqdroppls my_db
-iqfrec my_db /work/database/my_db.db
```

You specify the database name twice in a row, once to specify it as the database you are starting, and once to specify it as the database undergoing forced recovery. Both the `-iqfrec` and `-iqdroppls` options require the database name.

Sybase strongly recommends that you start the IQ server with the `-gd` option set to restrict access to the server to the DBA. Forced recovery operates in all modes, but restricted access gives the DBA greater control over inadvertent opens of the database.

- 2 Connect to the database you are recovering.
- 3 Run the stored procedure `sp_iqcheckdb` in allocation mode:

```
sp_iqcheckdb 'allocation database'
```

If there are no errors and `sp_iqcheckdb` displays the message “Freelist Updated,” you have recovered leaked space and forced recovery. Continue to the next step.

If inconsistency is found, follow the instructions in the section “Dropping inconsistent indexes, tables, or columns” to drop inconsistent objects. Then run `sp_iqcheckdb` again to recover leaked space.

- 4 Issue a checkpoint.

- 5 Stop the server using your usual method.
- 6 Restart the server using your usual method, and proceed with normal processing.

## Replacing write servers

If the write server of a multiplex fails in such a way that its SYSTEM dbspace and transaction log files cannot be recovered, you can use forced recovery and the `sp_iqcheckdb` option `resetclocks` as part of the process to convert one of the query servers to a write server. For the complete server conversion procedure, see the section “Replacing write servers” in Chapter 14, “Backup and Data Recovery” of the *Sybase IQ System Administration Guide*.

## Emergency recovery without a transaction log

Ordinarily, you should follow the recovery procedures discussed in the previous sections of this chapter.

In rare situations, you may need to use the emergency recovery procedure, if all of the following conditions exist:

- No backup exists
- The transaction log has been lost
- There is no mirror log
- There is insufficient time to work with Sybase Engineering to develop alternative options

Under these conditions, you can restart the server with the `-f` option.

### **-f recovery option**

Function Force the database server to start after the transaction log has been lost.

Syntax **start\_asiq -n server-name [ other-server-options ] -f**

**Description** If there is a transaction log in the same directory as the database, the database server carries out a checkpoint recovery of the Catalog, and a recovery using the transaction log, and then terminates—it does not continue to run. You can then restart the database server without the `-f` option for normal operation.

If there is no transaction log, the database server carries out a checkpoint recovery of the database and then terminates—it does not continue to run. You can then restart the database server without the `-f` option for normal operation.

---

**Warning!** While using the `-f` option can usually bring the server back online, it also very frequently results in corruption of the database, because it bypasses replay of transactions. The resulting corruption may not be encountered until a later time and usually cannot be repaired. This procedure is highly risky and is not recommended except in extreme cases. You may also need to do a forced recovery (`-iqfrec`) to reopen the database.

---

**Example**

```
start_asiq -n bad_server -x 'tcpip(port=7934}'  
-gd dba -f
```

## Handling unrepairable problems

In some cases, the `sp_iqcheckdb` stored procedure does not have access to sufficient valid information to repair consistency problems with indexes, tables, or columns. This section describes the actions you can take to resolve this type of problem.

The following table lists DBCC output messages that indicate problems that DBCC cannot repair. See the section “DBCC error messages” on page 76 for a more extensive list of DBCC messages.

**Table 2-9: Messages for problems DBCC cannot repair**

| <b>DBCC message</b>   | <b>Description/action</b>  |
|---|--|
| FP Lookup Table Inconsistencies   | An unrepairable error, where the 1-byte or 2-byte FP is internally inconsistent.   |
| VDO Incorrect First Available Fields<br>VDO Incorrect Next Available Fields<br>VDO Incorrect Used Count Fields<br>VDO Incorrect In-use Bitvec<br>VDO Incorrect In-use Bitmap<br>VDO Incorrect Partial Bitmap<br>VDO Incorrect Deleted Bitmaps | Unrepairable errors that can cause entire tables to be inaccessible. You must force drop the inconsistent table to resolve these errors. |
| Blocks with Multiple Owners<br>1st Multiple Owner PBN   | Blocks in use by more than one database object. Drop the object that is reported as inconsistent.  |
| DBCC Meta-data Errors<br>Blockmap Invalid Chunksize Error Count<br>Blockmap Compression Bit Error Count<br>Blockmap Invalid Block Number Error Count  | An internal page mapping structure is inconsistent and the object needs to be dropped.   |
| DBCC Inconsistent Disk Block Headers<br>DBCC Decompress Errors  | The storage for the object is inconsistent and the object needs to be dropped.   |

See the following sections for information on resolving these unrepairable problems.

## Index problems that cannot be repaired

If DBCC detects a problem with an index, the name of the index is reported with the type of problem. Some problems can be repaired, while others can only be resolved by dropping an index, column, or table. If the DBCC output contains the errors “Inconsistent Index” or “Missing Index RIDs,” DBCC may be able to fix the index. See the section “Analyzing index errors” on page 57 for the procedure to follow for indexes reported as “Inconsistent Index,” when `sp_iqcheckdb` is run in default or check mode.

If an index is reported as “Inconsistent Index” after you run `sp_iqcheckdb` in repair mode to repair the index, then this index cannot be fixed. Depending on the type of problem, use `DROP INDEX`, `ALTER TABLE DROP COLUMN`, `DROP TABLE`, or the `FORCE_DROP` option to resolve the problem. See the section “Dropping inconsistent indexes, tables, or columns” on page 75.

Sybase recommends calling Sybase Technical Support for help in determining the best course of action to fix an inconsistent index or table.

## Dropping inconsistent indexes, tables, or columns

If `sp_iqcheckdb` reports unrepairable indexes, columns, or tables, then these objects must be dropped using the `DROP INDEX`, `ALTER TABLE DROP COLUMN`, or `DROP TABLE` statements respectively.

---

**Note** You should not attempt to force drop objects unless Sybase Technical Support has instructed you to do so.

---

If you cannot drop an inconsistent object, set the temporary `FORCE_DROP` option. `FORCE_DROP` causes the IQ server to silently leak the on-disk storage of the dropped object, rather than try to reclaim it. You can recover the leaked space later using `DBCC`. This is desirable for an inconsistent object, because the only information about the storage of an object is within the object itself, and this information is suspect for an inconsistent object.

---

**Note** When force dropping objects, you must ensure that only the DBA is connected to the database. The server must be restarted immediately after a force drop.

---

### ❖ To drop inconsistent objects:

- 1 Restart the server.

```
start_asiq -n bad_db_server -x 'tcpip{port=7934}'
-gm 1 -gd dba bad_db.db
```

In this command, `-gm 1` allows only one user to connect, and `-gd` restricts access to the DBA. You must not allow other users to connect when force dropping objects.

- 2 Set the temporary option `FORCE_DROP` to `ON`.

```
set temporary option FORCE_DROP = 'ON'
```

- 3 Drop all inconsistent objects.

Use the commands `DROP INDEX`, `ALTER TABLE DROP COLUMN`, or `DROP TABLE` as needed. *Do not enter any other DDL or DML commands until after restarting the server.*

## 4 Restart the server.

To recover the leaked space and update the allocation map to the correct state, start the server with the `-iqdroplks` option set. You can set this option now, as shown in this example, or whenever you restart the server.

```
start_asiq -n bad_db_server -x 'tcpip{port=7934}'
-iqdroplks bad_db bad_db.db
```

You specify the database name twice, once to specify which database you are starting (with no path), and once to identify the database for the `-iqdroplks` option (pathname optional).

5 Run `sp_iqcheckdb`.

```
sp_iqcheckdb 'allocation database';
```

This step resets the database allocation map to the calculated allocation map.

For more information, see the sections “Leaked space recovery” on page 70 and “Database verification” on page 49.

## DBCC error messages

The following table lists the most important messages in the DBCC output.

**Table 2-10: DBCC error messages**

| DBCC message  | Description/action   |
|---|--|
| Inconsistent Index Count  | The number of indexes that DBCC found to have inconsistencies.               |
| Inconsistent Index  | The name of an index that DBCC found to be inconsistent.                     |
| Repaired Index Count  | The number of indexes that DBCC attempted to repair.                         |
| Repaired Index  | The name of an index that DBCC has attempted to repair.                      |
| Extra Index RIDs Repaired<br>Missing Index RIDs Repaired<br>Duplicate Index RIDs Repaired<br>Extra Index RIDs<br>Missing Index RIDs<br>Duplicate Index RIDs | The total number of rows that are inconsistent for all inconsistent indexes. |
| Bitmap Verify Errors  | The total number of inconsistent bitmaps in all database objects.            |

| <b>DBCC message</b>   | <b>Description/action</b>  |
|---|--|
| FP Lookup Table Inconsistencies   | An unrepairable error, where the 1-byte or 2-byte FP is internally inconsistent.   |
| Non-Completed Index Count   | The number of indexes that could not be verified, because an exception occurred while checking.  |
| Non-Completed Index   | The name of an index that was not verified because an exception occurred while checking. If the exception is a future version, out of memory, or out of buffers error, commit the DBCC connection and re-run DBCC. |
| HG Missing Groups<br>HG Missing Groups Repaired<br>HG Extra Groups<br>HG Extra Groups Repaired<br>HG Extra Keys<br>HG Extra Keys Repaired<br>HG Missing Keys<br>HG Missing Keys Repaired<br>B-Tree Invalid Item Count<br>B-Tree Invalid Item Count<br>G-Array Empty Page Errors<br>G-Array Bad Group Type Errors<br>G-Array Out of Order Group Errors | High Group index specific errors and repair messages.  |
| VDO Incorrect First Available Fields<br>VDO Incorrect Next Available Fields<br>VDO Incorrect Used Count Fields<br>VDO Incorrect In-use Bitvec<br>VDO Incorrect In-use Bitmap<br>VDO Incorrect Partial Bitmap<br>VDO Incorrect Deleted Bitmaps   | Unrepairable errors that can cause entire tables to be inaccessible. You must force drop the inconsistent table to resolve these errors.   |
| Block Count Mismatch  | This count accompanies other allocation errors.  |
| Blocks Leaked<br>1st Unowned PBN  | Blocks that were found not to be in use by any database object. Use <code>-iqdrolks</code> to repair.  |
| Blocks with Multiple Owners<br>1st Multiple Owner PBN   | Blocks in use by more than one database object. Drop the object that is reported as inconsistent.  |
| Unallocated Blocks in Use<br>1st Unallocated PBN  | Blocks in use by a database object, but not marked as in use. Use <code>-iqdrolks</code> to repair.  |
| Freelist Updated  | Indicates successful allocation repair.  |
| Freelist Not Updated  | Indicates errors detected during allocation repair and the allocation repair was not successful.   |
| Invalid Blockmap Unique ID Generator<br>Blockmap Unique ID Generator Updated<br>Invalid Transaction ID Counter<br>Transaction ID Generator Updated  | Errors and repair messages specific to the DBCC <code>resetclocks</code> option.   |

| <b>DBCC message</b>  | <b>Description/action</b>  |
|--|--|
| DBCC Future Version Errors   | DBCC could not open the table, because DDL was performed on it. Commit the DBCC connection and re-run DBCC.        |
| DBCC Out of Buffers Errors   | The size of the IQ main cache is too small. Either increase the main cache size or run DBCC on individual objects. |
| DBCC Out of Memory Errors  | There is insufficient system memory to complete the DBCC operation.  |
| DBCC Meta-data Errors<br>Blockmap Invalid Chunksize Error Count<br>Blockmap Compression Bit Error Count<br>Blockmap Invalid Block Number Error Count | An internal page mapping structure is inconsistent and the object needs to be dropped.                             |
| DBCC Page Read Errors  | An I/O error occurred while trying to read an object. Perform hardware diagnostics.                                |
| DBCC Inconsistent Disk Block Headers<br>DBCC Decompress Errors   | The storage for the object is inconsistent and the object needs to be dropped.                                     |
| DBCC Unknown Exceptions  | An exception of a type unknown to DBCC occurred. Check the IQ message file for details.                            |

# Error Messages by SQLCODE

## About this chapter

This chapter lists, by SQLCODE, most database error and warning messages reported by Sybase IQ. SQL preprocessor (SQLPP) errors and warnings are listed in Chapter 7, “SQL Preprocessor Error Messages.”

In addition to the organization used in this chapter, you can find lists of database error and warning messages sorted by SQLSTATE, Sybase error code, and a full message description.

| For error messages          | See  |
|-----------------------------|--|
| Sorted by SQLSTATE          | Chapter 4, “Error Messages by SQLSTATE”          |
| Sorted by Sybase error code | Chapter 5, “Error Messages by Sybase Error Code” |
| Full message description    | Chapter 6, “Database Error Messages”             |

## Error messages listed by SQLCODE

This section provides a listing by numeric SQLCODE of IQ error and warning messages and their descriptions. Negative codes are considered errors; positive codes are warnings. The messages are listed in numerical order as if they are all positive numbers. If a SQLCODE has both a negative and a positive value, the first message listed is a warning (the positive SQLCODE), and the second message is an error (the negative SQLCODE). The SQLCODE 0 indicates successful completion.

Many of the errors contain the characters %1, %2 and so on. These are replaced by the parameters to the error message.

| SQLCODE | Error message                               |
|---------|---|
| 0       | (no message)                                |
| -72     | No database file specified                  |
| -74     | The selected database is currently inactive |
| -75     | Request to start/stop database denied       |
| -76     | Request denied -- no active databases       |
| -77     | Database name not unique                    |

| SQLCODE | Error message   |
|---------|---|
| -78     | Dynamic memory exhausted                                |
| -79     | Invalid local database switch                           |
| -80     | Unable to start database server                         |
| -81     | Invalid database server command line                    |
| -82     | Unable to start specified database: %1                  |
| -83     | Specified database not found                            |
| -84     | Specified database is invalid                           |
| -85     | Communication error                                     |
| -86     | Not enough memory to start                              |
| -87     | Database name required to start server                  |
| -88     | Client/server communications protocol version mismatch  |
| -89     | Database server not running in multi-user mode          |
| -90     | Argument %1 of procedure '%2' cannot be null            |
| -91     | Procedure '%1' terminated with unhandled exception '%2' |
| -92     | '%1' is not a valid class file                          |
| -93     | Class '%1' has no public field '%2'                     |
| -94     | Invalid type for field reference                        |
| -95     | Parse error: %1   |
| -96     | Database server already running                         |
| -97     | Database page size too big                              |
| -98     | Authentication violation                                |
| -99     | Connections to database have been disabled              |
| 100     | Row not found   |
| -100    | Database server not found                               |
| 101     | Value truncated   |
| -101    | Not connected to a database                             |
| 102     | Using temporary table                                   |
| -102    | Database server connection limit exceeded               |
| 103     | Invalid data conversion                                 |
| -103    | Invalid user ID or password                             |
| -103    | Invalid user ID or password                             |
| 104     | Row has been updated since last time read               |
| -104    | Invalid user ID or password on preprocessed module      |
| 105     | Procedure has completed                                 |
| -105    | Database cannot be started -- %1                        |
| 106     | Value for column '%1' in table '%2' has changed         |
| -106    | Cannot open transaction log file -- %1                  |

| SQLCODE | Error message   |
|---------|---|
| 107     | Language extension detected in syntax   |
| -107    | Error writing to transaction log file   |
| -108    | Connection not found  |
| 109     | Null value eliminated in aggregate function   |
| -109    | There are still active database connections   |
| 110     | Transaction log backup page only partially full   |
| -110    | Item '%1' already exists  |
| 111     | Statement cannot be executed  |
| -111    | Index name '%1' not unique  |
| 112     | More information required   |
| -112    | Table already has a primary key   |
| 113     | Database option '%1' for user '%2' has an invalid setting                                     |
| -113    | Column '%1' in foreign key has a different definition than primary key                        |
| 114     | Character set translation to '%1' cannot be performed; '%2' is used instead                   |
| -114    | Number of columns defined for the view does not match SELECT statement                        |
| 115     | Database server cannot convert data from/to character set '%1', conversion may not be correct |
| 116     | Language '%1' is not supported, '%2' will be used   |
| -116    | Table must be empty   |
| 117     | Unsupported character set '%1' and unsupported language '%2'; language used is '%3' instead   |
| 118     | Illegal user selectivity estimate specified   |
| -118    | Table '%1' has no primary key   |
| 119     | Unable to open backup log '%1'  |
| -119    | Primary key column '%1' already defined   |
| 120     | '%1' is an unknown option   |
| -120    | User '%1' already has GRANT permission  |
| 121     | Cursor option values changed  |
| -121    | %1  |
| 122     | The result returned is non-deterministic.   |
| -122    | Operation would cause a group cycle   |
| 123     | Database created without any schema   |
| -123    | User '%1' is not a user group   |
| 124     | Invalid data conversion: NULL was inserted for column '%1' on row %2.                         |
| -124    | More columns are being dropped from table '%1' than are defined                               |
| 125     | An invalid multi-byte input character was encountered   |
| -125    | ALTER clause conflict   |
| 126     | An invalid multi-byte output character was encountered  |
| -126    | Table cannot have two primary keys  |

| SQLCODE | Error message  |
|---------|--|
| 127     | An input character could not be converted to database character set and simple substitution took place         |
| -127    | Cannot alter a column in an index  |
| 128     | An output character could not be converted to the application character set and simple substitution took place |
| -128    | Cannot drop a user that owns tables in runtime system  |
| 129     | Plan may contain virtual indexes.  |
| 130     | A row could not be converted to the new schema format  |
| -130    | Invalid statement  |
| -131    | Syntax error near '%1' %2  |
| 132     | Cannot output the histogram for string column '%1'   |
| -132    | SQL statement error  |
| 133     | UltraLite connection was restored  |
| -133    | Invalid prepared statement type  |
| 134     | UltraLite cursor (or result set or table) was restored   |
| -134    | Feature '%1' not implemented   |
| 135     | Compressed database is not encrypted   |
| -135    | Language extension   |
| -136    | Table '%1' is in an outer join cycle   |
| -137    | Table '%1' requires a unique correlation name  |
| -138    | Dbospace '%1' not found  |
| -139    | More than one table is identified as '%1'  |
| -140    | User ID '%1' does not exist  |
| -141    | Table '%1' not found   |
| -142    | Correlation name '%1' not found  |
| -143    | Column '%1' not found  |
| -144    | Column '%1' found in more than one table -- need a correlation name  |
| -145    | Foreign key name '%1' not found  |
| -146    | There is no way to join '%1' to '%2'   |
| -147    | There is more than one way to join '%1' to '%2'  |
| -148    | Unknown function '%1'  |
| -149    | Function or column reference to '%1' must also appear in a GROUP BY  |
| -150    | Invalid use of an aggregate function   |
| -151    | Subquery allowed only one select list item   |
| -152    | Invalid ORDER BY specification   |
| -153    | SELECT lists in UNION, INTERSECT or EXCEPT do not match in length  |
| -154    | Wrong number of parameters to function '%1'  |

| SQLCODE | Error message  |
|---------|--|
| -155    | Invalid host variable  |
| -156    | Invalid expression near '%1'   |
| -157    | Cannot convert %1 to a %2  |
| -158    | Value %1 out of range for destination  |
| -159    | Invalid column number  |
| -160    | Can only describe a SELECT statement   |
| -161    | Invalid type on DESCRIBE statement   |
| -162    | Cannot convert %1 to a %2. The bad value was supplied for column '%3' on row %4 of the data file.                |
| -163    | Derived table '%1' has no name for column %2   |
| -164    | Namespace heap exhausted at internal function: %1  |
| -165    | Java VM heap exhausted at internal function: %1  |
| -170    | Cursor has not been declared   |
| -171    | Error opening cursor   |
| -172    | Cursor already open  |
| -180    | Cursor not open  |
| -181    | No indicator variable provided for NULL result   |
| -182    | Not enough fields allocated in SQLDA   |
| -183    | Cannot find index named '%1'   |
| -184    | Column '%1' in table '%2' cannot be NULL. The invalid data was supplied to load table in a data file on line %3. |
| -185    | SELECT returns more than one row   |
| -186    | Subquery cannot return more than one row   |
| -187    | Illegal cursor operation attempt   |
| -188    | Not enough values for host variables   |
| -189    | Unable to find in index '%1' for table '%2'  |
| -190    | Cannot update an expression  |
| -191    | Cannot modify column '%1' in table '%2'  |
| -192    | Update operation attempted on non-updatable query  |
| -193    | Primary key for table '%1' is not unique   |
| -194    | No primary key value for foreign key '%1' in table '%2'  |
| -195    | Column '%1' in table '%2' cannot be NULL   |
| -196    | Index '%1' for table '%2' would not be unique  |
| -197    | No current row of cursor   |
| -198    | Primary key for row in table '%1' is referenced by foreign key '%2' in table '%3'                                |
| -199    | INSERT/DELETE on cursor can modify only one table  |
| 200     | Warning  |

| SQLCODE | Error message  |
|---------|--|
| -200    | Invalid option '%1' -- no PUBLIC setting exists                                |
| -201    | Invalid setting for option '%1'  |
| -202    | Only PUBLIC settings are allowed for option '%1'                               |
| -203    | Cannot set a temporary option for user '%1'                                    |
| -204    | Only the DBA can set the option '%1'   |
| -205    | Integrated logins are not permitted  |
| -206    | Integrated logins are required, standard logins are not permitted              |
| -207    | Wrong number of values for INSERT  |
| -208    | Row has changed since last read -- operation canceled                          |
| -209    | Constraint '%1' violated: Invalid value for column '%2' in table '%3'          |
| -210    | User '%1' has the row in '%2' locked   |
| -211    | Not allowed while '%1' is using the database                                   |
| -212    | CHECKPOINT statement requires a rollback log                                   |

| -1000101L | %2 not supported by Sybase IQ. %1   |
| -1000102L | Cannot update table %2 because it is defined in one or more join indexes. %1  |
| -1000103L | Cannot find an index for field '%2'. Every field must have at least one index. Current IndexCount<br>= %3. %1   |
| 1000104L  | in join virtual table '%1'%2  |
| -1000106L | Local temporary table, %2, must be committed in order to create an index. %1  |
| 1000107L  | For table '%1' in join virtual table '%2', \n%3 left outer rows with %4 columns will be moved<br>(inserted/deleted).\n  |

| SQLCODE   | Error message   |
|-----------|---|
| 1000108L  | The DELETE where clause yielded %1 rows, but table '%2' has no data.  |
| 1000109L  | For table %1, join index %2 was modified. %3 rows were deleted.   |
| -1000110L | The wrong SIndex has been opened for a fast projection index. %1  |
| -1000111L | The wrong FP Index has been opened for a field. %1  |
| -1000112L | The EBM on the field's columnDescriptor does not match the column EBM on the FPIIndex. %1   |
| -1000113L | Field %2 does not have an FP index. %1  |
| -1000114L | CMP index can only be created on two distinct columns having identical datatypes. %1  |
| -1000115L | You cannot delete from join index %2 in the 'top' table %3. %1  |
| -1000116L | A temporary table cannot participate in a JOIN INDEX. '%2' is a temporary table. %1   |
| 1000117L  | The data to be inserted into table '%2', column '%1' cannot be converted to the datatype of the column. NULL will be inserted if the column allows NULLs.   |
| -1000118L | Join index %2 was not found in the catalog. %1  |
| 1000119L  | The data to be inserted into table '%2', column '%1' from row %3 of the select results cannot be converted to the datatype of the destination column. NULL will be inserted if the column allows NULLs. |
| -1000120L | Join %2 was not found in the catalog. %1  |
| -1000121L | binary data not supported on data longer than 32767 %2, %1  |
| 1000122L  | The data to update table '%2', column '%1' cannot be converted to the datatype of the destination column for update number %3 to the table. NULL will be inserted if the column allows NULLs.           |
| -1000123L | Index '%2' cannot be created. Multicolumn indexes must be created using distinct columns. %1  |
| -1000124L | Function or Operator not supported on data longer than %2 bytes. %1   |
| -1000125L | Table %2 is not part of join index %3. %1   |
| -1000126L | This database must be upgraded. %1  |
| -1000127L | The LIMIT specified, '%2', is too large. %1   |
| -1000128L | You must delete from join index %2 before you can delete from table %3. %1  |
| 1000129L  | %1 row(s) deleted from index '%2' in %3 seconds.  |
| 1000130L  | %1 row(s) deleted from index '%2' on field '%3', %4 seconds.  |
| -1000131L | The DELIMITED BY and LIMIT options are valid for WD indexes only. %1  |
| -1000132L | In table '%2', the START ROW ID value (%3) must be greater than %4. Data has already been inserted at this location. %1   |
| -1000133L | During the LOAD into table '%2', the LOAD statement's column count (%3) must be between 1 and %4. Check the LOAD statement's 'load-specification'. %1   |
| -1000134L | Column '%2' is being inserted into twice by this INSERT command. %1   |
| -1000135L | Cannot open the existence list for table '%2'. %1   |
| -1000136L | A mismatch exists between the existence bitmaps in the insert object. %1  |
| -1000137L | While inserting, table '%2' already had a Complete started. %1  |
| -1000138L | A data conversion error has occurred while loading record %2. This error should be reported to Sybase. %1   |

| SQLCODE   | Error message   |
|-----------|---|
| -1000139L | You cannot insert into table '%2' past the original end of the table while there are %3 join virtual tables based on it. %1 |
| -1000140L | You cannot change column '%2' because it is a 'link' column. %1   |
| -1000141L | Column '%2' must be included in the LOAD since it is used in a join. %1   |
| 1000142L  | Insert into '%1', \n%2 Inners added, %3 Left Outers converted to Inners, %4 Right Outers added.                             |
| -1000143L | While inserting, table '%2' must be Complete(d) before it can be (re)Prepare(d). %1   |
| -1000144L | Cannot insert into table '%2'. Column %3 does not have a name. %1   |
| -1000145L | The insert for table '%2' has no insertable columns in the column list. %1  |
| -1000146L | Cannot get the index buffer for the column '%2'. %1   |
| -1000147L | Table '%2' must be Prepare(d) before inserting. %1  |
| -1000148L | The table being inserted to does not have a name. %1  |
| -1000149L | Unable to open table '%2' with Read/Write access for insert. %1   |
| -1000150L | Cannot insert into the table. Column '%2' has no index. %1  |
| -1000151L | NOT NULL column '%2' was not included in this insert. Data is needed at row %3. %1  |
| -1000152L | The NOT NULL column '%2' was not included in this insert. %1  |
| -1000153L | Table '%2', pass-x index count mismatch (%3/%4). %1   |
| -1000154L | While inserting into table '%2', the record number recycled (%3). %1  |
| -1000155L | The attempted insert length (%3) for column %2 is longer than the maximum allowed (%4). %1                                  |
| -1000156L | Tried to insert into too many (%2) LOW FAST indexes at one time in table '%3'. %1   |
| -1000157L | Columns for the index must be in ascending sort order. %1   |
| -1000158L | An Identity size mismatch has occurred. The current transaction will rollback. %1   |
| 1000159L  | \nIn table '%1', the %2 width insert of %3 columns will begin at record %4.   |
| 1000161L  | You have %1 and %2 available, respectively.   |
| -1000162L | Unable to create the requested object. %1   |
| -1000163L | %1 not supported.   |
| -1000164L | Only %1 supported.  |
| -1000165L | Only a single foreign key constraint can be created on the same foreign key column(s) and same candidate key column(s).     |
| -1000166L | Cannot specify IGNORE CONSTRAINT ALL or DATA VALUE when option CONVERSION_ERROR is on. %1                                   |
| -1000167L | Cannot %3 table %2 because of RI concurrency conflict. %1   |
| -1000168L | Cannot create %1 HG index because one already exists on the given columns.  |
| -1000169L | Cannot create unique HG index because primary key or unique constraint already exists on the given columns.                 |
| -1000170L | Cannot create a duplicate '%1' index '%2'.  |
| 1000171L  | Insert Pass IP2.2 started.  |
| 1000172L  | Insert Pass %1 (%2 of %3) started.  |

| SQLCODE   | Error message   |
|-----------|---|
| -1000173L | Index '%1' cannot be created. Multicolumn indexes must be created using distinct columns.                                   |
| 1000174L  | \n\t%1 records were inserted into '%2'.\n   |
| 1000175L  | %1 records were inserted into %2 join virtual tables (%3 sections)\n for '%4'.\n  |
| -1000176L | Cannot perform foreign key create/alter operation because one is already in progress. %1                                    |
| 1000177L  | Only the catalog entry for the '%1' index was created, no data was available to populate the index.                         |
| -1000178L | The DATA parameter must have a non-NULL value. %1   |
| -1000179L | The column length (%2) must be [if variable sized, between 0 and] %3. %1  |
| -1000180L | The maximum column length (%2) must be between 0 and %3. %1   |
| -1000181L | The maximum column length (%2) is less than the actual length (%3). %1  |
| -1000182L | Table %2 cannot be opened because it is currently involved in a foreign key create/alter operation.<br>%1                   |
| -1000183L | Attempt to insert data into column '%2' with a non-insertable datatype (%3) ignored. %1                                     |
| -1000184L | When inserting into join index '%2', the START ROW ID (%3) must 0 or 1. %1  |
| -1000185L | Cannot drop table %1 because foreign keys still reference it.   |
| -1000186L | Cannot create foreign key constraint on a candidate key that is also a foreign key.   |
| -1000187L | Unable to implicitly convert column '%2' to datatype (%3) from datatype (%4). %1  |
| -1000188L | Only ASCII and BINARY are supported LOAD formats. %1  |
| -1000189L | DDL statements cannot proceed while the %2 is in an out of space condition. %1  |
| -1000190L | The index '%2' cannot be opened in the current transaction (%3). %1   |
| -1000191L | Proxy, remote, or non-IQ tables are not allowed in joins. Tablename is '%2'. %1   |
| -1000192L | The cursor for table '%2' has no data to fetch. %1  |
| -1000193L | The table '%2' is either not part of the join virtual table or has had its data loaded through linked indices. %1           |
| -1000194L | You must supply either a cursor count (%2) and a cursor array, or neither. %1   |
| -1000195L | Load specification '%2' only valid for column(s) having datatype '%3'. %1   |
| -1000196L | You must supply a join index name. %1   |
| -1000197L | Table '%2' has no columns in the cursor that don't already have data, \nor the join field(s) are not part of the cursor. %1 |
| -1000198L | Cannot create join index with table(s) having column(s) of datatype %2. %1  |
| 1000199L  | Table '%1' has no data.   |
| -1000200L | Table '%2' has no data with which to join the other tables. %1  |
| -1000201L | JOIN cannot be created or updated because the thread's stack space has been exceeded. %1                                    |
| -1000202L | In join virtual table '%2', there is no table cursor at index %3. %1  |
| -1000203L | In join virtual table '%2', there is no tablename at index %3. %1   |
| -1000204L | Within the join, the portion for table '%2' already has data. %1  |
| -1000205L | Within the join, the cursor for table '%2' yielded no data. %1  |

| SQLCODE   | Error message   |
|-----------|---|
| -1000206L | Within the join, there remain no rows to insert into table '%2' \nafter processing the INNER and OUTER rows. %1   |
| -1000207L | Within the join, the portion for table '%2' has no data. \nINSERT INTO or LOAD this table first. %1   |
| -1000208L | Within the non-appending partial width insert into the join virtual table '%2', \nthere must be at least one other column besides the join field(s). %1 |
| -1000209L | Within the partial width insert into the join virtual table '%2', \nrow %3 is no longer an inner join. %1   |
| -1000210L | For the partial width insert into the join virtual table '%2', \nrow %3 is no longer a left outer. %1   |
| -1000211L | For the partial width insert into the join virtual table '%2', \nrow %3 is no longer a right outer. %1  |
| -1000212L | For the partial width insert into join virtual table '%2', \nrow %3 is now a duplicate row (but was not before or vice-versa). %1                       |
| -1000214L | Duplicate records seen in table %2. The SYNCHRONIZE operation will rollback. %1   |
| -1000215L | An invalid filler option (e.g., filler()) was specified in the load statement. %1   |
| 1000218L  | Join virtual table fetches (JP1%1) complete for '%2'.   |
| -1000219L | The specified indextype does not exist in the given target. %1  |
| 1000220L  | Left Rows: %1, Right Rows: %2, Ratio: %3 to %4\n  |
| 1000221L  | Right Rows Skipped: %1 (former left outers).\n  |

| -1009146L | Cannot perform requested command as there is a DBCC command in progress. %1                                      |
| 1009147L  | Space has become available in the %1 store of database %2. Sybase IQ (TM) is no longer waiting for more dbspace. |
| -1009148L | Cannot use -iqfrec or -iqdroplks to start a multiplex query server with no local store. %1                       |
| -1009149L | %2 Internal Inconsistency: %1 (%3,%4,%5)   |
| -1009150L | Cannot delete/truncate CK %2 because of RI violation - FK has non-nulls. %1                                      |
| -1009151L | Cannot %2 CK %3 row %4 because of RI violation. %1   |
| -1009152L | Cannot %2 FK %3 row %4 because of RI violation. %1   |
| -1009153L | Cannot remove row %3 from CK %2 during LOAD cleanup because of RI violation. %1                                  |
| -1009154L | Cannot alter dbspace when a backup is in progress  |
| -1009155L | Cannot perform requested command as there is an ALTER DBSPACE command in progress. %1                            |
| -1009156L | Cannot drop segment %2 since it is in use by the database. %1  |
| -1009157L | There is insufficient reserve space to add %3 blocks to segment %2. Only %4 blocks or less may be added. %1      |
| -1009158L | Cannot resize segment %2 since the truncated region is in use. %1  |
| -1009159L | The status specified for segment %2 is unchanged. %1   |
| -1009160L | There must be at least one readwrite dbspace (%2). %1  |
| -1009161L | Cannot resize segment %2 since it is readonly. %1  |
| -1009162L | Insufficient space to relocate structures on %2. %1  |
| -1009163L | Segment %2 cannot be smaller than %3 blocks. %1  |
| -1009164L | You cannot drop the last dbspace. %1   |
| -1009412L | The INSERT ... LOCATION statement must use a SELECT statement. %1  |
| -1010000L | The dbspace '%2' already exists. %1  |
| -1010001L | Cannot use raw partition for dbspace file '%2'. %1   |
| -1010002L | File format mismatch; database %2; Sybase IQ: %3. %1   |
| -1010003L | Catalog format mismatch: database %2; Sybase IQ: %3. %1  |
| -1010004L | Stored procedure format mismatch: database %2; Sybase IQ: %3. %1   |
| -1010005L | File format date mismatch: database %2; Sybase IQ: %3. %1  |
| -1010006L | Maximum blocks for dbspace '%2' is %3 blocks. %4 blocks were specified. (Database blocksize is %5.) %1           |

| SQLCODE   | Error message  |
|-----------|--|
| -1010007L | The number of blocks (%3) for dbspace '%2' must be less than or equal to the number of blocks in the raw partition (%4). %1    |
| -1010008L | For an IQ PAGE SIZE of %2, the dbspace '%3' must have at least %4 MB. %1   |
| -1010009L | Improper use of cursor - programmer error %1   |
| -1010010L | An invalid attribute flag was passed to the cursor   |
| -1010011L | Not enough server threads available for this query.  |
| -1010012L | The cursor is in an invalid state %1   |
| 1010013L  | IQ cannot support the %1 connections requested by the server.\nRestart the server with -gm %2 on the command line.             |
| -1010013L | Raw partition %2 is already in use. %1   |
| 1010014L  | Default cache size is used for command %1.   |
| -1010015L | The MAIN store is out of space. Space must be added to the MAIN store first. %1  |
| -1010016L | The TEMPORARY store is out of space. Space must be added to the TEMPORARY store first. %1                                      |
| -1010017L | You cannot create tables on a query node without a local IQ Store. %1  |
| -1010018L | Shared and local tables cannot participate in a JOIN INDEX. %1   |
| -1010019L | A Query node may not modify objects in the main IQ Store. %1   |
| -1010020L | Nothing to backup: Query node has no local store. %1   |
| -1010021L | Foreign key constraint on a local table cannot reference a shared table. %1  |
| -1010022L | Cannot modify main store from a multiplex query server. %1   |
| -1010023L | IQ does not support updatable cursor with JOIN/UNION/GROUP BY/DISTINCT/SET,OLAP function. %1                                   |
| -1010024L | Column '%2' is not updatable if it is long binary/varchar, rowid, referenced in the select list, or not in FOR UPDATE list. %1 |
| -1010025L | The current row can not be updated since it has been deleted. %1   |
| -1011000L | Vertical Projection Cursor state error %1  |
| -1011001L | Cannot find index for a given dfe %1   |
| -1011002L | The number of existing indexes exceeds the current maximum number of indexes. %1   |
| -1011003L | Vertical Projection Cursor does not support AD-HOC joins. %1   |
| -1011004L | Cannot drop primary key or unique constraint because a foreign key still references it.  |
| -1011006L | the pattern argument in a like predicate must have string datatype.  |
| -1011007L | the escape argument in a like predicate must be a one byte character.  |
| -1011009L | Group (L)  |
| -1011010L | Group (S)  |
| -1011011L | Aggregate (L)  |
| -1011012L | Aggregate (S)  |
| -1011013L | Projection   |

| SQLCODE   | Error message   |
|-----------|---|
| -1012000L | You cannot do a partial restore for database '%2' because it has been updated (%3) since its last backup (%4). %1                 |
| -1012001L | There is already a backup in progress. %1   |
| -1012002L | Unable to write to archive. ('%2') %1   |
| -1012003L | You must do a full backup before doing an incremental backup. %1  |
| -1012004L | You cannot do incremental backups with this release. %1   |
| -1012005L | Server is reporting no files in the database. %1  |
| -1012006L | Server reports '%2' files in IQ store, IQ reports '%3'. %1  |
| -1012007L | IQ unable to find all files to back up. %1  |
| -1012008L | Database has changed since last restore. %1   |

*Error messages listed by SQLCODE*

---

| <b>SQLCODE</b> | <b>Error message</b>  |
|----------------|---|
| 1013110L       | IQ had insufficient memory to create the buffer cache with the size specified with the Main_Cache_Memory_MB or Temp_Cache_Memory_MB options. Instead, the cache will be created using the default size. |

# Error Messages by SQLSTATE

## About this chapter

This chapter lists most database error and warning messages reported by Sybase IQ, arranged by SQLSTATE. SQL preprocessor (SQLPP) errors and warnings are listed in Chapter 7, “SQL Preprocessor Error Messages.”

In addition to the organization used in this chapter, you can find lists of database error and warning messages sorted by SQLCODE, Sybase error code, and a full message description.

| For error messages          | See  |

| Sorted by Sybase error code | Chapter 5, “Error Messages by Sybase Error Code” |
| Full message description    | Chapter 6, “Database Error Messages”             |

## Error messages listed by SQLSTATE

Sybase IQ supports the SQLSTATE error code defined by SQL/92. Each SQLSTATE value is a 5-character string containing a 2-character class followed by a 3-character subclass. Each character can be one of the uppercase letters A through Z or the digits 0 through 9. A class that begins with A through H or 0 through 4 has been defined by the ANSI standard; other classes are implementation defined. Similarly, subclasses of standard classes that start with the same characters (A-H, 0-4) are standard. The subclass 000 always means that no subclass code is defined. The most common SQLSTATE value is 00000, which indicates successful completion.

Many of the errors contain the characters %1, %2 and so on. These are replaced by the parameters to the error message.

| SQLSTATE | Error message |
|----------|---------------|
| 00000    | (no message)  |
| 01000    | Warning       |

| SQLSTATE | Error message  |
|----------|--|
| 01003    | Null value eliminated in aggregate function  |
| 01004    | Value truncated  |
| 01S02    | Cursor option values changed   |
| 01W01    | Invalid data conversion: NULL was inserted for column '%1' on row %2.  |
| 01W02    | Using temporary table  |
| 01W03    | Invalid data conversion  |
| 01W04    | Row has been updated since last time read  |
| 01W05    | Procedure has completed  |
| 01W06    | Value for column '%1' in table '%2' has changed  |
| 01W07    | Language extension detected in syntax  |
| 01W08    | Statement cannot be executed   |
| 01W09    | More information required  |
| 01W10    | Transaction log backup page only partially full  |
| 01W11    | Database option '%1' for user '%2' has an invalid setting  |
| 01W12    | Character set translation to '%1' cannot be performed; '%2' is used instead                                    |
| 01W13    | Database server cannot convert data from/to character set '%1', conversion may not be correct                  |
| 01W14    | Language '%1' is not supported, '%2' will be used  |
| 01W15    | Unsupported character set '%1' and unsupported language '%2'; language used is '%3' instead                    |
| 01W16    | Illegal user selectivity estimate specified  |
| 01W17    | '%1' is an unknown option  |
| 01W18    | The result returned is non-deterministic.  |
| 01W19    | Database created without any schema  |
| 01W20    | Plan may contain virtual indexes.  |
| 01W21    | A row could not be converted to the new schema format  |
| 01W23    | Cannot output the histogram for string column '%1'   |
| 01WC1    | An invalid multi-byte input character was encountered  |
| 01WC2    | An invalid multi-byte output character was encountered   |
| 01WC3    | An input character could not be converted to database character set and simple substitution took place         |
| 01WC4    | An output character could not be converted to the application character set and simple substitution took place |
| 02000    | Row not found  |
| 04W07    | A dbspace has reached its maximum file size  |
| 04W08    | The server attempted to access a page beyond the end of the maximum allowable dbspace file size                |
| 07001    | Not enough values for host variables   |
| 07002    | Not enough fields allocated in SQLDA   |
| 07003    | Error opening cursor   |

| SQLSTATE | Error message  |
|----------|--|
| 07005    | Can only describe a SELECT statement                   |
| 07009    | Invalid descriptor index                               |
| 07W01    | Invalid type on DESCRIBE statement                     |
| 07W02    | Invalid statement                                      |
| 07W03    | Invalid prepared statement type                        |
| 07W04    | SQLDA fields inconsistent for a multi-row SQLDA        |
| 07W05    | SQLDA data type invalid                                |
| 07W06    | Invalid SQL identifier                                 |
| 07W07    | Host variables may not be used within a batch          |
| 07W08    | Invalid sqlen field in SQLDA                           |
| 08001    | Database cannot be started -- %1                       |
| 08003    | Not connected to a database                            |
| 08004    | User ID '%1' does not exist                            |
| 08005    | Password contains an illegal character                 |
| 08W01    | Database server not found                              |
| 08W02    | Connection not found                                   |
| 08W03    | Database server connection limit exceeded              |
| 08W04    | Connections to database have been disabled             |
| 08W05    | Cannot open transaction log file -- %1                 |
| 08W06    | There are still active database connections            |
| 08W07    | Unable to start database server                        |
| 08W08    | Invalid database server command line                   |
| 08W09    | Unable to start specified database: %1                 |
| 08W10    | Specified database not found                           |
| 08W11    | Specified database is invalid                          |
| 08W12    | Communication error                                    |
| 08W13    | Not enough memory to start                             |
| 08W14    | Database name required to start server                 |
| 08W15    | Client/server communications protocol version mismatch |
| 08W16    | Database server not running in multi-user mode         |
| 08W17    | Error writing to transaction log file                  |
| 08W18    | Sqlpp/dblib version mismatch                           |
| 08W19    | Client/database server version mismatch                |
| 08W21    | Authentication violation                               |
| 08W22    | Database page size too big                             |
| 08W23    | Database server already running                        |
| 08W24    | Invalid parameter                                      |

| SQLSTATE | Error message   |
|----------|---|
| 08W25    | Invalid local database switch   |
| 08W26    | Dynamic memory exhausted  |
| 08W27    | Database name not unique  |
| 08W28    | Request denied -- no active databases   |
| 08W29    | Request to start/stop database denied   |
| 08W30    | The selected database is currently inactive                                     |
| 08W32    | Invalid database page size  |
| 08W33    | Database creation failed: %1  |
| 08W34    | Could not load the store DLL %1   |
| 08W35    | Could not execute store DLL (%1) entry point.                                   |
| 08W36    | Cannot create item (%1) in the specified dbspace.                               |
| 08W37    | The connection parameters file could not be found                               |
| 08W38    | Error parsing connection parameter string                                       |
| 08W39    | No database file specified  |
| 08W40    | Database is active  |
| 08W41    | Database %1 needs recovery  |
| 08W42    | Database upgrade failed   |
| 08W43    | Database upgrade not possible   |
| 08W44    | Could not load the backup/restore DLL %1  |
| 08W45    | Could not execute backup/restore DLL (%1) entry point.                          |
| 08W46    | Error during backup: %1   |
| 08W47    | Incorrect store DLL (%1) version.   |
| 08W48    | Authentication failed   |
| 08W49    | Parse error: %1   |
| 08W50    | '%1' is not a write file for '%2'   |
| 08W51    | Invalid IQ database command line option or parameter value: %1                  |
| 08W52    | Cannot initialize IQ memory manager: %1   |
| 08W53    | Cannot allocate System V resources  |
| 08W54    | Parse error: %1   |
| 08W55    | Server not found and unable to autostart  |
| 08W56    | Specified database file already in use  |
| 08W57    | Database upgrade not possible; RowGenerator table not owned by user dbo         |
| 08W58    | Database upgrade not possible; user tables have table ids in system table range |
| 08W59    | Certicom handshake failure  |
| 08W60    | Connection error: %1  |
| 08W61    | Certicom initialization on server failed  |
| 08W62    | Incorrect or missing encryption key   |

| SQLSTATE | Error message  |
|----------|--|
| 08W63    | Decryption error: %1   |
| 08W64    | Database server cannot convert data from/to character set '%1'                     |
| 08W65    | Client out of memory   |
| 08W66    | Encryption error: %1   |
| 08W67    | Unable to start specified database: Server must be upgraded to start database %1   |
| 08W68    | Unable to start specified database: Log file error                                 |
| 08W69    | jConnect does not support encryption   |
| 08W70    | Could not load the encryption dll %1   |
| 09W02    | Illegal cursor operation attempt   |
| 09W03    | Result set not permitted in '%1'   |
| 09W04    | INSERT/DELETE on cursor can modify only one table                                  |
| 09W05    | Cannot uniquely identify rows in cursor  |
| 09W06    | Cursor is restricted to FETCH NEXT operations                                      |
| 09W07    | statement's size limit is invalid.   |
| 09W08    | Cannot update or delete an all-NULL row from table '%1'                            |
| 0A000    | Feature '%1' not implemented   |
| 0AQ48    | A log is required for IQ databases   |
| 0AW01    | Language extension   |
| 0AW02    | Transact-SQL feature not supported   |
| 0AW03    | Disallowed language extension detected in syntax near '%1'                         |
| 0AW04    | Triggers and procedures not supported in runtime server                            |
| 0AW05    | Statement is not allowed in passthrough mode                                       |
| 0AW06    | Computed columns are not supported in this database                                |
| 0AW07    | Feature not available with UltraLite   |
| 0AW08    | You cannot synchronize or upgrade with uncommitted transactions                    |
| 0AW09    | Synchronization server failed to commit the upload                                 |
| 0AW10    | DTC transactions are not supported on this platform                                |
| 0AW11    | Download failed because of conflicts with existing rows.                           |
| 0AW12    | Synchronization failed due to an error on the server: %1                           |
| 0AW13    | Cannot change synchronization user_name when status of the last upload is unknown. |
| 0AW14    | Plan can not be generated for this type of statement                               |
| 21000    | SELECT returns more than one row   |
| 21W01    | Subquery cannot return more than one row   |
| 22001    | Right truncation of string data  |
| 22002    | No indicator variable provided for NULL result                                     |
| 22003    | Value %1 out of range for destination  |
| 22005    | Error in assignment  |

| SQLSTATE | Error message  |
|----------|--|
| 22012    | Division by zero   |
| 22019    | Invalid escape character '%1'  |
| 22024    | Unterminated C string  |
| 22025    | Invalid escape sequence '%1'   |
| 22W02    | Row has changed since last read -- operation canceled  |
| 22W03    | Invalid TEXTPTR value used with WRITETEXT or READTEXT  |
| 22X13    | Invalid preceding or following size in OLAP function   |
| 23501    | Column '%1' in table '%2' cannot be NULL. The invalid data was supplied to load table in a data file on line %3. |
| 23502    | Column '%1' in table '%2' cannot be NULL   |
| 23503    | No primary key value for foreign key '%1' in table '%2'  |
| 23504    | Number of columns allowing NULLs exceeds limit   |
| 23505    | Index '%1' for table '%2' would not be unique  |
| 23506    | Constraint '%1' violated: Invalid value for column '%2' in table '%3'  |
| 23507    | The specified foreign key (%1) can not be enforced   |
| 23W01    | Primary key for table '%1' is not unique   |
| 23W05    | Primary key for row in table '%1' is referenced by foreign key '%2' in table '%3'                                |
| 24000    | Cursor not in a valid state  |
| 24501    | Cursor not open  |
| 24502    | Cursor already open  |
| 24503    | No current row of cursor   |
| 24504    | Invalid scroll position '%1'   |
| 24W01    | Cursor has not been declared   |
| 26501    | SQL statement error  |
| 28000    | The string is too long (%1)  |
| 28000    | Password cannot be longer than %1 characters   |
| 28000    | Password must be at least %1 characters  |
| 28000    | Invalid user ID or password  |
| 28000    | Invalid user ID or password  |
| 28W01    | Invalid user ID or password on preprocessed module   |
| 28W02    | Integrated logins are not permitted  |
| 28W03    | Integrated logins are required, standard logins are not permitted  |
| 28W04    | Integrated login failed  |
| 28W05    | Integrated logins are not supported for this database  |
| 28W06    | The integrated login ID guest can only be mapped to the guest database user ID                                   |
| 28W07    | Cannot map a login ID to the sys or public user ID   |
| 28W08    | The login ID '%1' is already mapped to user ID '%2'  |

| SQLSTATE | Error message   |
|----------|---|
| 28W09    | The login ID '%1' has not been mapped to any database user ID   |
| 2D501    | COMMIT/ROLLBACK not allowed within trigger actions  |
| 33000    | Invalid SQL descriptor name   |
| 37505    | Wrong number of parameters to function '%1'   |
| 38W01    | System command failed with return code %1   |
| 3B001    | Savepoint '%1' not found  |
| 3B002    | ROLLBACK TO SAVEPOINT not allowed   |
| 3BW01    | Savepoints require a rollback log   |
| 3BW02    | Result set not allowed from within an atomic compound statement   |
| 40000    | Run time SQL error -- %1  |
| 40001    | Deadlock detected   |
| 40W01    | Internal database error %1 -- transaction rolled back   |
| 40W02    | Terminated by user -- transaction rolled back   |
| 40W03    | Disk full '%1' -- transaction rolled back   |
| 40W04    | I/O error %1 -- transaction rolled back   |
| 40W05    | Disk write failure '%1' -- transaction rolled back  |
| 40W06    | All threads are blocked   |
| 40W07    | Connection was terminated   |
| 40W08    | Memory error -- transaction rolled back   |
| 42501    | %1  |
| 42R01    | Referential integrity actions other than RESTRICT not allowed for temporary tables                                |
| 42R02    | Tables related by key constraint must both be permanent or both be temporary created with ON COMMIT PRESERVE ROWS |
| 42R03    | Key constraint between temporary tables requires a primary key (not unique constraint)                            |
| 42U00    | View references '%1', which is a temporary object. Views can only refer to permanent objects.                     |
| 42U01    | Illegal reference to correlation name '%1'  |
| 42U02    | Owner '%1' used in a qualified column reference does not match correlation name '%2'                              |
| 42U03    | Set clause for column '%1' used incorrectly   |
| 42U04    | Constraint '%1' not found   |
| 42U05    | (no message)  |
| 42U06    | Invalid reference to or operation on constraint '%1'  |
| 42U07    | Invalid hint specified for table '%1'   |
| 42W01    | User '%1' already has GRANT permission  |
| 42W02    | Operation would cause a group cycle   |
| 42W03    | User '%1' is not a user group   |
| 42W04    | Syntax error near '%1' %2   |
| 42W05    | Unknown function '%1'   |

| SQLSTATE | Error message  |
|----------|--|
| 42W06    | Invalid use of an aggregate function                                     |
| 42W07    | Invalid host variable  |
| 42W08    | Invalid expression near '%1'   |
| 42W09    | SETUSER not allowed in procedures, triggers, events or batches           |
| 42W13    | Invalid column number  |
| 42W14    | Variable '%1' not found  |
| 42W15    | There is already a variable named '%1'                                   |
| 42W16    | Invalid option '%1' -- no PUBLIC setting exists                          |
| 42W17    | Invalid setting for option '%1'  |
| 42W18    | User '%1' has the row in '%2' locked                                     |
| 42W19    | Not allowed while '%1' is using the database                             |
| 42W20    | CHECKPOINT statement requires a rollback log                             |
| 42W21    | Table in use   |
| 42W22    | Attempted two active database requests                                   |
| 42W23    | Procedure in use by '%1'   |
| 42W24    | Label '%1' not found   |
| 42W25    | Invalid absolute or relative offset in FETCH                             |
| 42W26    | Wrong number of variables in FETCH                                       |
| 42W27    | %1   |
| 42W28    | COMMIT/ROLLBACK not allowed within atomic operation                      |
| 42W29    | Procedure or trigger calls have nested too deeply                        |
| 42W30    | Update operation attempted on a read-only cursor                         |
| 42W31    | Update operation attempted on non-updatable query                        |

# Error Messages by Sybase Error Code

## About this chapter

This chapter lists most database error and warning messages reported by Sybase IQ, arranged by Sybase error code. SQL preprocessor (SQLPP) errors and warnings are listed in Chapter 7, “SQL Preprocessor Error Messages.”

In addition to the organization used in this chapter, you can find lists of database error and warning messages sorted by SQLCODE, SQLSTATE, and a full message description.

| For error messages       | See                                     |
|--------------------------|---|
| Sorted by SQLCODE        | Chapter 3, “Error Messages by SQLCODE”  |
| Sorted by SQLSTATE       | Chapter 4, “Error Messages by SQLSTATE” |
| Full message description | Chapter 6, “Database Error Messages”    |

## Error messages listed by Sybase error code

Sybase error codes are a set of error codes for use by all Sybase products, including Adaptive Server Enterprise. For every Sybase error code returned by Sybase IQ, there is a pair of matching Sybase IQ error codes (SQLCODE and SQLSTATE). In many cases Sybase IQ error codes offer a finer level of granularity than their Sybase error code counterparts, thus some Sybase error codes in the following table are non-unique.

Many of the errors contain the characters %1, %2 and so on. These are replaced by the parameters to the error message.

| Sybase error code | SQLCODE | Error message                                     |
|-------------------|---------|---|
| 0                 | -631    | RAISERROR executed: %1                            |
| 102               | -171    | Error opening cursor                              |
| 102               | -199    | INSERT/DELETE on cursor can modify only one table |
| 102               | -933    | A log is required for IQ databases                |

| Sybase error code | SQLCODE | Error message   |
|-------------------|---------|---|
| 102               | -275    | Triggers and procedures not supported in runtime server                     |
| 102               | -273    | COMMIT/ROLLBACK not allowed within trigger actions                          |
| 102               | -131    | Syntax error near '%1' %2   |
| 102               | -687    | Syntax error, cannot specify IQ specific options without specifying IQ PATH |
| 102               | -875    | There is no way to join to '%1'   |
| 102               | -145    | Foreign key name '%1' not found   |
| 102               | -271    | Trigger definition conflicts with existing triggers                         |
| 102               | -272    | Invalid REFERENCES clause in trigger definition                             |
| 102               | -635    | GRANT of column permission on view not allowed                              |
| 102               | -151    | Subquery allowed only one select list item                                  |
| 102               | -269    | Cannot delete a column referenced in a trigger definition                   |
| 103               | -250    | Identifier '%1' too long  |
| 104               | -854    | Function or column reference to '%1' in the ORDER BY clause is invalid      |
| 108               | -152    | Invalid ORDER BY specification  |
| 133               | -262    | Label '%1' not found  |
| 134               | -261    | There is already a variable named '%1'                                      |
| 137               | -260    | Variable '%1' not found   |
| 154               | -623    | Data definition statements not allowed in procedures or triggers            |
| 155               | -200    | Invalid option '%1' -- no PUBLIC setting exists                             |
| 174               | -154    | Wrong number of parameters to function '%1'                                 |
| 176               | -611    | Transact-SQL feature not supported  |
| 176               | -148    | Unknown function '%1'   |
| 182               | -159    | Invalid column number   |
| 201               | -639    | Parameter name missing in call to procedure '%1'                            |
| 201               | -615    | Parameter '%1' not found in procedure '%2'                                  |
| 201               | -737    | Signature '%1' does not match procedure parameters                          |
| 205               | -153    | SELECT lists in UNION, INTERSECT or EXCEPT do not match in length           |
| 207               | -124    | More columns are being dropped from table '%1' than are defined             |
| 207               | -143    | Column '%1' not found   |
| 208               | -142    | Correlation name '%1' not found   |
| 209               | -144    | Column '%1' found in more than one table -- need a correlation name         |
| 209               | -163    | Derived table '%1' has no name for column %2                                |
| 213               | -207    | Wrong number of values for INSERT   |
| 217               | -274    | Procedure or trigger calls have nested too deeply                           |
| 220               | -158    | Value %1 out of range for destination                                       |
| 230               | -191    | Cannot modify column '%1' in table '%2'                                     |

| Sybase error code | SQLCODE | Error message   |
|-------------------|---------|---|
| 230               | -190    | Cannot update an expression   |
| 233               | -195    | Column '%1' in table '%2' cannot be NULL  |
| 233               | -733    | Number of columns allowing NULLs exceeds limit                                    |
| 257               | -157    | Cannot convert %1 to a %2   |
| 257               | -705    | Return type of void from procedure '%1' cannot be used in any expression          |
| 262               | -121    | %1  |
| 264               | -637    | Duplicate insert column   |
| 285               | -708    | READTEXT or WRITETEXT statement cannot refer to a view                            |
| 301               | -147    | There is more than one way to join '%1' to '%2'                                   |
| 301               | -680    | Invalid expression in WHERE clause of Transact-SQL outer join                     |
| 301               | -146    | There is no way to join '%1' to '%2'  |
| 305               | -681    | Invalid join type used with Transact-SQL outer join                               |
| 311               | -295    | Cannot uniquely identify rows in cursor   |
| 314               | -122    | Operation would cause a group cycle   |
| 315               | -136    | Table '%1' is in an outer join cycle  |
| 315               | -137    | Table '%1' requires a unique correlation name                                     |
| 401               | -134    | Feature '%1' not implemented  |
| 401               | -135    | Language extension  |
| 401               | -156    | Invalid expression near '%1'  |
| 404               | -890    | Statement size or complexity exceeds server limits                                |
| 409               | 109     | Null value eliminated in aggregate function                                       |
| 409               | -90     | Argument %1 of procedure '%2' cannot be null                                      |

# Database Error Messages

## About this chapter

This chapter lists most database error and warning messages reported by Sybase IQ. SQL preprocessor (SQLPP) errors and warnings are listed in Chapter 7, “SQL Preprocessor Error Messages.”

In addition to the organization used in this chapter, you can find lists of database error and warning messages sorted by SQLCODE, SQLSTATE, and a Sybase error code.

| For error messages          | See  |
|-----------------------------|--|
| Sorted by SQLCODE           | Chapter 3, “Error Messages by SQLCODE”           |
| Sorted by SQLSTATE          | Chapter 4, “Error Messages by SQLSTATE”          |
| Sorted by Sybase error code | Chapter 5, “Error Messages by Sybase Error Code” |

The topics in this chapter include:

- “Error message descriptions” on page 227
- “Internal errors (assertion failed)” on page 456

For additional messages, see *Adaptive Server Anywhere Error Messages*.

## Error message descriptions

This section provides a listing by numeric SQLCODE of IQ error and warning messages and their descriptions. Negative codes are considered errors; positive codes are warnings. The messages are listed in numerical order as if they are all positive numbers. If a SQLCODE has both a negative and a positive value, the first message listed is “Warning nnn” (the positive SQLCODE), then “Error nnn” (the negative SQLCODE). The SQLCODE 0 indicates successful completion.

Sybase IQ supports the SQLSTATE error code defined by SQL/92. Each SQLSTATE value is a 5-character string containing a 2-character class followed by a 3-character subclass. Each character can be one of the uppercase letters A through Z or the digits 0 through 9. A class that begins with A through H or 0 through 4 has been defined by the ANSI standard; other classes are implementation defined. Similarly, subclasses of standard classes that start with the same characters (A-H, 0-4) are standard. The subclass 000 always means that no subclass code is defined. The most common SQLSTATE value is 00000, which indicates successful completion.

Sybase error codes are a set of error codes for use by all Sybase products, including Adaptive Server Enterprise. For every Sybase error code returned by Sybase IQ, there is a matching Sybase IQ error code. In many cases Sybase IQ error codes offer a finer level of granularity than their Sybase error code counterparts, thus some Sybase error codes in the following table are non-unique.

Errors with an ODBC state marked “handled by ODBC driver” are not returned to ODBC applications, as the ODBC driver carries out the required actions.

Many of the messages listed in this chapter contain the characters %1, %2 and so on. These characters are replaced by the parameters returned with the error or warning message.

## 0

Message text

(no message)

| Item       | Value        |
|------------|--------------|
| SQLCode    | 0            |
| Constant   | SQLE_NOERROR |
| SQLState   | 00000        |
| ODBC State | 00000        |

Probable cause

This code indicates that there was no error or warning.

## Error 72

Message text

No database file specified

| Item    | Value |
|---------|-------|
| SQLCode | -72   |

| Item       | Value                 |
|------------|-----------------------|
| Constant   | SQLE_NO_DATABASE_FILE |
| SQLState   | 08W39                 |
| ODBC State | 08001                 |

Probable cause The database engine was started but there was no specified database file. The engine is stopped.

## Error 74

Message text The selected database is currently inactive

| Item       | Value                    |
|------------|--------------------------|
| SQLCode    | -74                      |
| Constant   | SQLE_DATABASE_NOT_ACTIVE |
| SQLState   | 08W30                    |
| ODBC State | 08001                    |

Probable cause The selected database is in an inactive state. This state occurs during database initialization and shutdown.

## Error 75

Message text Request to start/stop database denied

| Item       | Value                           |
|------------|---------------------------------|
| SQLCode    | -75                             |
| Constant   | SQLE_START_STOP_DATABASE_DENIED |
| SQLState   | 08W29                           |
| ODBC State | 08001                           |

Probable cause The engine has denied permission to start/stop a database.

## Error 76

Message text Request denied-- no active databases

| Item       | Value                            |
|------------|----------------------------------|
| SQLCode    | -76                              |
| Constant   | SQLE_REQUEST_DENIED_NO_DATABASES |
| SQLState   | 08W28                            |
| ODBC State | 08001                            |

Probable cause                    The engine has denied the request as there are currently no loaded databases.

## Error 77

Message text                    Database name not unique

| Item       | Value            |
|------------|------------------|
| SQLCode    | -77              |
| Constant   | SQLE_ALIAS_CLASH |
| SQLState   | 08W27            |
| ODBC State | 08001            |

Probable cause                    The database cannot be loaded as its name is conflicting with a previously loaded database.

## Error 78

Message text                    Dynamic memory exhausted!

| Item       | Value                         |
|------------|-------------------------------|
| SQLCode    | -78                           |
| Constant   | SQLE_DYNAMIC_MEMORY_EXHAUSTED |
| SQLState   | 08W26                         |
| ODBC State | HY001                         |

Probable cause                    A failure occurred when trying to allocate dynamic memory.

## Error 79

Message text                    Invalid local database switch

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -79                       |
| Constant   | SQLE_INVALID_LOCAL_OPTION |
| SQLState   | 08W25                     |
| ODBC State | 08001                     |

Probable cause                      An invalid local database switch was found in the DBS option.

## Error 80

Message text                        Unable to start database engine

| Item       | Value                       |
|------------|-----------------------------|
| SQLCode    | -80                         |
| Constant   | SQLE_UNABLE_TO_START_ENGINE |
| SQLState   | 08W07                       |
| ODBC State | 08001                       |

Probable cause                      It was not possible to start the database engine or multi-user client. Either there is not enough memory to run the database engine, or the executable cannot be found.

## Error 81

Message text                        Invalid database engine command line

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -81                       |
| Constant   | SQLE_INVALID_COMMAND_LINE |
| SQLState   | 08W08                     |
| ODBC State | 08001                     |

Probable cause                      It was not possible to start the database engine or multi-user client because the command line was invalid. of how the engine is started.

## Error 82

Message text                        Unable to start specified database

| Item       | Value                         |
|------------|-------------------------------|
| SQLCode    | -82                           |
| Constant   | SQLE_UNABLE_TO_START_DATABASE |
| SQLState   | 08W09                         |
| ODBC State | 08001                         |

Probable cause

The database engine or multi-user client was started but was unable to find the specified database or server name. No specific reason is known.

## Error 83

Message text

Specified database not found

| Item       | Value                   |
|------------|-------------------------|
| SQLCode    | -83                     |
| Constant   | SQLE_DATABASE_NOT_FOUND |
| SQLState   | 08W10                   |
| ODBC State | 08001                   |

Probable cause

The database engine or multi-user client was started but was unable to find the specified database or server name. The database file cannot be opened or the specified server cannot be found on the network. The database engine or client is stopped.

## Error 84

Message text

Specified database is invalid

| Item       | Value                 |
|------------|-----------------------|
| SQLCode    | -84                   |
| Constant   | SQLE_INVALID_DATABASE |
| SQLState   | 08W11                 |
| ODBC State | 08001                 |

Probable cause

The database engine was started but the specified database file is invalid. The engine is stopped.

**Error 85**

Message text

Communication error

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -85                       |
| Constant   | SQLE_COMMUNICATIONS_ERROR |
| SQLState   | 08W12                     |
| ODBC State | 08S01                     |

Probable cause

There is a communication problem between the multi-user client and server. This happens most frequently when the multi-user client was unable to start because a communication error occurred while trying to locate the server.

**Error 86**

Message text

Not enough memory to start

| Item       | Value          |
|------------|----------------|
| SQLCode    | -86            |
| Constant   | SQLE_NO_MEMORY |
| SQLState   | 08W13          |
| ODBC State | HY001          |

Probable cause

The database engine or multi-user client executable was loaded but was unable to start because there is not enough memory to run properly.

**Error 87**

Message text

Database name required to start engine

| Item       | Value                       |
|------------|-----------------------------|
| SQLCode    | -87                         |
| Constant   | SQLE_DATABASE_NAME_REQUIRED |
| SQLState   | 08W14                       |
| ODBC State | 08001                       |

Probable cause

A database name is required to start the database engine or the multi-user client, but it was not specified.

## Error 88

Message text

Client/server communications protocol mismatch

| Item       | Value                  |
|------------|------------------------|
| SQLCode    | -88                    |
| Constant   | SQLE_PROTOCOL_MISMATCH |
| SQLState   | 08W15                  |
| ODBC State | 08S01                  |

Probable cause

The multi-user client was unable to start because the protocol versions of the client and the running server do not match. Make sure the client and server software are the same version.

## Error 89

Message text

Database engine not running in multi-user mode

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -89                       |
| Constant   | SQLE_ENGINE_NOT_MULTIUSER |
| SQLState   | 08W16                     |
| ODBC State | 08001                     |

Probable cause

The database was started for bulk loading (the-b switch) and cannot be used as a multi-user engine. Stop the database, and start again without-b. In the DOS version of Watcom SQL 3.0, the database engine was not started in multi-user mode.

## Error 90

Message text

Argument %1 of procedure '%2' cannot be null

| Item        | Value                                    |
|-------------|--|
| SQLCode     | -90                                      |
| Constant    | SQLE_ARGUMENT_CANNOT_BE_NULL             |
| SQLState    | WP000                                    |
| ODBC State  | 23000                                    |
| Parameter 1 | the argument number which cannot be null |

| Item        | Value   |
|-------------|---|
| Parameter 2 | the name of the procedure which cannot receive the null parameter |

Probable cause

A null value was passed to a procedure which was expecting a scalar argument. For example, a Java procedure which has an 'int' argument cannot receive a null value.

## Error 91

Message text

Procedure '%1' terminated with unhandled exception '%2'

| Item        | Value  |
|-------------|--|
| SQLCode     | -91  |
| Constant    | SQLE_UNHANDLED_JAVA_EXCEPTION                                    |
| SQLState    | WP001  |
| ODBC State  | S1000  |
| Parameter 1 | the name of the procedure which returned the unhandled exception |
| Parameter 2 | the fully qualified Java class name of the unhandled exception   |

Probable cause

A Java procedure terminated with an active exception, and this exception is reflected in SQL as an error status.

## Error 92

Message text

'%1' is not a valid class file

| Item        | Value                        |
|-------------|------------------------------|
| SQLCode     | -92                          |
| Constant    | SQLE_BAD_CLASS_FILE          |
| SQLState    | WP002                        |
| ODBC State  | S1000                        |
| Parameter 1 | the name of the invalid file |

Probable cause

A file passed to the INSTALL JAVA command was not a valid Java class file.

## Error 93

Message text

Class '%1' has no public field '%2'

| Item        | Value   |
|-------------|---|
| SQLCode     | -93   |
| Constant    | SQLE_FIELD_NOT_FOUND  |
| SQLState    | WW013   |
| ODBC State  | S1000   |
| Parameter 1 | the name of the class in which the named field could not be found |
| Parameter 2 | the name of the field which could not be found                    |

Probable cause

An expression referenced a field which either does not exist or is not public.

## Error 94

Message text

Invalid type for field reference

| Item       | Value                        |
|------------|------------------------------|
| SQLCode    | -94                          |
| Constant   | SQLE_INVALID_FIELD_REFERENCE |
| SQLState   | WW014                        |
| ODBC State | S1000                        |

Probable cause

An expression attempted to reference a field or a method of a non-Java value. Field references via '.' and '>>' are only valid when applied to Java objects.

## Error 95

Message text

Invalid parameter

| Item       | Value                  |
|------------|------------------------|
| SQLCode    | -95                    |
| Constant   | SQLE_INVALID_PARAMETER |
| SQLState   | 08W24                  |
| ODBC State | 08004                  |

Probable cause An error occurred while parsing the string parameter associated with one of the entry points: `db_start_engine()`, `db_start_database()`, `db_stop_engine()`, `db_stop_database()`, `db_string_connect()`.

## Error 96

Message text Database engine already running

| Item       | Value                       |
|------------|-----------------------------|
| SQLCode    | -96                         |
| Constant   | SQLE_ENGINE_ALREADY_RUNNING |
| SQLState   | 08W23                       |
| ODBC State | HY000                       |

Probable cause The database engine was not able to start on a `db_start_engine` call, because it was already running.

## Error 97

Message text Database's page size too big

| Item       | Value                  |
|------------|------------------------|
| SQLCode    | -97                    |
| Constant   | SQLE_PAGE_SIZE_TOO_BIG |
| SQLState   | 08W22                  |
| ODBC State | 08004                  |

Probable cause You have attempted to start a database or create a write file for a database with a page size that exceeds the maximum page size of the running engine. Either restart the engine with this database named on the command line, or restart the engine with a larger page size.

## Error 98

Message text Authentication violation

| Item     | Value                         |
|----------|-------------------------------|
| SQLCode  | -98                           |
| Constant | SQLE_AUTHENTICATION_VIOLATION |

| Item       | Value |
|------------|-------|
| SQLState   | 08W21 |
| ODBC State | 08001 |

Probable cause You have attempted to connect to an engine or server which has been authenticated for exclusive use with a specific application.

## Error 99

Message text Connections to database have been disabled

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -99                       |
| Constant   | SQLE_CONNECTIONS_DISABLED |
| SQLState   | 08W04                     |
| ODBC State | 08005                     |

Probable cause Connections to the multi-user server have been disabled on the server console. You will receive this error until they have been reenabled on the server console.

## Warning 100

Message text No data

| Item       | Value         |
|------------|---------------|
| SQLCode    | 100           |
| Constant   | SQLE_NOTFOUND |
| SQLState   | 02W01         |
| ODBC State | 02W01         |

Probable cause You have positioned a cursor beyond the beginning or past the end of the query. There is no row at that position. You have attempted to access a descriptor area using an index value larger than the number of variables in the descriptor.

## Error 100

Message text Database engine not running

| Item       | Value                   |
|------------|-------------------------|
| SQLCode    | -100                    |
| Constant   | SQLE_ENGINE_NOT_RUNNING |
| SQLState   | 08W01                   |
| ODBC State | 08001                   |

Probable cause You have not run the database engine or network requestor or the interface library is unable to find it.

## Warning 101

Message text Value truncated

| Item       | Value          |
|------------|----------------|
| SQLCode    | 101            |
| Constant   | SQLE_TRUNCATED |
| SQLState   | 01004          |
| ODBC State | 01004          |

Probable cause You have tried to insert, update, or select a value in the database which is too large to fit in the destination. This warning is also produced if you do a fetch, and the host variable or SQLDA variable is not large enough to receive the value.

## Error 101

Message text Not connected to SQL database

| Item       | Value              |
|------------|--------------------|
| SQLCode    | -101               |
| Constant   | SQLE_NOT_CONNECTED |
| SQLState   | 08003              |
| ODBC State | 08003              |

Probable cause You have not connected to the database, or you have executed the DISCONNECT command and have not connected to the database again.

## Warning 102

Message text

Using temporary table

| Item       | Value                    |
|------------|--------------------------|
| SQLCode    | 102                      |
| Constant   | SQLE_TEMPORARY_TABLE     |
| SQLState   | 01W02                    |
| ODBC State | (handled by ODBC driver) |

Probable cause

A temporary table has been created in order to satisfy the query. It can only occur on an OPEN statement.

## Error 102

Message text

Too many connections to database

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -102                      |
| Constant   | SQLE_TOO_MANY_CONNECTIONS |
| SQLState   | 08W03                     |
| ODBC State | 08004                     |

Probable cause

If you are running the multi-user client, you have exceeded the number of computers allowed to connect to the server by your license agreement. Otherwise, the single user DOS engine is limited to 2 connections, and the Windows engine is restricted to 10 connections.

## Warning 103

Message text

Invalid data conversion

| Item       | Value               |
|------------|---------------------|
| SQLCode    | 103                 |
| Constant   | SQLE_CANNOT_CONVERT |
| SQLState   | 01W03               |
| ODBC State | 07006               |

**Probable cause** The database could not convert a value to the required type. This is either a value supplied to the database on an insert, update or as a host bind variable, or a value retrieved from the database into a host variable or SQLDA.

## Error 103

**Message text** Invalid userid or password

| Item       | Value              |
|------------|--------------------|
| SQLCode    | -103               |
| Constant   | SQLE_INVALID_LOGON |
| SQLState   | 28000              |
| ODBC State | 28000              |

**Probable cause** The user has supplied an invalid user ID or an incorrect password. ISQL will handle this error by presenting a connection dialog to the user.

## Warning 104

**Message text** Row has been updated since last time read

| Item       | Value                    |
|------------|--------------------------|
| SQLCode    | 104                      |
| Constant   | SQLE_ROW_UPDATED_WARNING |
| SQLState   | 01W04                    |
| ODBC State | (handled by ODBC driver) |

**Probable cause** A FETCH has retrieved a row from a cursor declared as a SCROLL cursor, and the row was previously fetched from the same cursor, and one or more columns in the row has been updated since the previous fetch. Note that the column(s) updated may or may not be fetched by the cursor; this warning just indicates that the row from the table has been updated. If the cursor involves more than one table, a row from one or more of the tables has been updated.

## Error 104

**Message text** Invalid userid and password on preprocessed module

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -104                      |
| Constant   | SQLE_INVALID_MODULE_LOGON |
| SQLState   | 28W01                     |
| ODBC State | 28000                     |

Probable cause      A user ID and password were specified when a module was preprocessed but the user ID or password is invalid.

## Warning 105

Message text      Procedure has completed

| Item       | Value                    |
|------------|--------------------------|
| SQLCode    | 105                      |
| Constant   | SQLE_PROCEDURE_COMPLETE  |
| SQLState   | 01W05                    |
| ODBC State | (handled by ODBC driver) |

Probable cause      An OPEN or a RESUME has caused a procedure to execute to completion. There are no more result sets available from this procedure. This warning will also be returned if you attempt to RESUME a cursor on a SELECT statement.

## Error 105

Message text      Cannot be started-- %1

| Item        | Value                  |
|-------------|------------------------|
| SQLCode     | -105                   |
| Constant    | SQLE_UNABLE_TO_CONNECT |
| SQLState    | 08001                  |
| ODBC State  | 08001                  |
| Parameter 1 | name of database       |

Probable cause      The specified database environment cannot be found. If it is a database name, then it does not exist, it is not a database, it is inconsistent, or it is an older format. If it is a server name, then the server cannot be found.

## Warning 106

Message text

Value for column '%1' in table '%2' has changed

| Item        | Value                                      |
|-------------|--|
| SQLCode     | 106  |
| Constant    | SQLE_COLUMN_VALUE_CHANGED                  |
| SQLState    | 01W06                                      |
| ODBC State  | (handled by ODBC driver)                   |
| Parameter 1 | name of the column whose value has changed |
| Parameter 2 | name of the table containing the column    |

Probable cause

A replicated UPDATE has found a value in an updated column that does not match the value when the original UPDATE was made.

## Error 106

Message text

Cannot open log file %1

| Item        | Value                |
|-------------|----------------------|
| SQLCode     | -106                 |
| Constant    | SQLE_CANNOT_OPEN_LOG |
| SQLState    | 08W05                |
| ODBC State  | 08003                |
| Parameter 1 | name of log file     |

Probable cause

The database engine was unable to open the transaction log file. Perhaps the log file name specifies an invalid device or directory. If this is the case, you can use the dblog utility to find out where the transaction log should be and perhaps change it.

## Warning 107

Message text

Language extension detected in syntax

| Item       | Value                         |
|------------|-------------------------------|
| SQLCode    | 107                           |
| Constant   | SQLE_SYNTAX_EXTENSION_WARNING |
| SQLState   | 01W07                         |
| ODBC State | (handled by ODBC driver)      |

Probable cause                    The command you are executing contains extensions to ANSI 1992 Entry SQL.

## Error 107

Message text                    Error writing to log file

| Item       | Value                  |
|------------|------------------------|
| SQLCode    | -107                   |
| Constant   | SQLE_ERROR_WRITING_LOG |
| SQLState   | 08W17                  |
| ODBC State | S1000                  |

Probable cause                    The database engine got an I/O error writing the log file. Perhaps the disk is full or the log file name is invalid.

## Warning 108

Message text                    Cursor operation conflict

| Item       | Value                          |
|------------|--------------------------------|
| SQLCode    | 108                            |
| Constant   | SQLE_CURSOR_OPERATION_CONFLICT |
| SQLState   | 01001                          |
| ODBC State | (handled by ODBC driver)       |

Probable cause                    You have attempted to perform an operation on the current row of a cursor, but the row has been modified by a searched DELETE.

## Error 108

Message text                    Connection not found

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -108                      |
| Constant   | SQLE_CONNECTION_NOT_FOUND |
| SQLState   | 08W02                     |
| ODBC State | 08003                     |

Probable cause The specified connection name on a DISCONNECT or SET CONNECTION statement is invalid.

## Warning 109

Message text Null value eliminated in aggregate function

| Item       | Value                      |
|------------|----------------------------|
| SQLCode    | 109                        |
| Constant   | SQLE_NULL_VALUE_ELIMINATED |
| SQLState   | 01003                      |
| ODBC State | (handled by ODBC driver)   |

Probable cause Value of the expression argument of the aggregate function evaluated to NULL for one or more rows.

## Error 109

Message text There are still active database connections

| Item       | Value                         |
|------------|-------------------------------|
| SQLCode    | -109                          |
| Constant   | SQLE_STILL_ACTIVE_CONNECTIONS |
| SQLState   | 08W06                         |
| ODBC State | S1000                         |

Probable cause An application has requested Sybase IQ to shutdown the database using the db\_stop() function when there are still active connections to the database.

## Warning 110

Message text Transaction log backup page only partially full

| Item       | Value                       |
|------------|-----------------------------|
| SQLCode    | 110                         |
| Constant   | SQLE_BACKUP_PAGE_INCOMPLETE |
| SQLState   | 01W10                       |
| ODBC State | (handled by ODBC driver)    |

Probable cause            A DB\_LOG\_BACKUP\_READ\_WAIT was issued against the transaction log and the page returned was not full. The application should reissue the request for the same page.

## Error 110

Message text            Item '%1' already exists

| Item        | Value                                |
|-------------|--------------------------------------|
| SQLCode     | -110                                 |
| Constant    | SQLE_NAME_NOT_UNIQUE                 |
| SQLState    | 52010                                |
| ODBC State  | 42S01                                |
| Parameter 1 | name of the item that already exists |

Probable cause            You have tried to create a file, table, view, column, foreign key, or publication with the same name as an existing one.

## Warning 111

Message text            Statement cannot be executed

| Item       | Value                    |
|------------|--------------------------|
| SQLCode    | 111                      |
| Constant   | SQLE_CANNOT_EXECUTE_STMT |
| SQLState   | 01W08                    |
| ODBC State | (handled by ODBC driver) |

Probable cause            You have specified a statement for the PREPARE...WITH EXECUTE statement that cannot be executed. If you specified an output SQLDA, it may contain a DESCRIBE of the prepared statement.

## Error 111

Message text            Index name '%1' not unique

| Item     | Value                      |
|----------|----------------------------|
| SQLCode  | -111                       |
| Constant | SQLE_INDEX_NAME_NOT_UNIQUE |

| Item        | Value                     |
|-------------|---------------------------|
| SQLState    | 52W04                     |
| ODBC State  | 42S11                     |
| Parameter 1 | name of the invalid index |

Probable cause You have attempted to create an index with a name of an existing index.

## Error 112

Message text Table already has a primary key

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -112                      |
| Constant   | SQLE_EXISTING_PRIMARY_KEY |
| SQLState   | 55013                     |
| ODBC State | 23000                     |

Probable cause You have tried to add a primary key on a table that already has a primary key defined. You must delete the current primary key before adding a new one.

## Warning 112

Message text More info required

| Item       | Value                    |
|------------|--------------------------|
| SQLCode    | 112                      |
| Constant   | SQLE_MORE_INFO           |
| SQLState   | 01W09                    |
| ODBC State | (handled by ODBC driver) |

Probable cause More information is required to complete the request. This is used internally in the database interface library to process a unified logon. It should not be returned to an application.

## Error 113

Message text Column %1 in foreign key has a different definition than primary key

| Item        | Value                        |
|-------------|------------------------------|
| SQLCode     | -113                         |
| Constant    | SQLE_INVALID_FOREIGN_KEY_DEF |
| SQLState    | 53030                        |
| ODBC State  | 23000                        |
| Parameter 1 | name of the problem column   |

Probable cause

The data type of the column in the foreign key is not the same as the data type of the column in the primary key. Change the definition of one of the columns using ALTER TABLE.

## Warning 113

Message text

Database option '%1' for user '%2' has an invalid setting

| Item        | Value  |
|-------------|--|
| SQLCode     | 113  |
| Constant    | SQLE_INVALID_OPTION_ON_CONNECT                         |
| SQLState    | 01W11  |
| ODBC State  | (handled by ODBC driver)                               |
| Parameter 1 | name of the database option that has the invalid value |
| Parameter 2 | name of the user attempting to connect                 |

Probable cause

Upon processing a connection request for a specific user, the engine processed a database option from the SYSOPTIONS table which had an invalid setting. The erroneous option setting is ignored; in its place, the engine will use the default option value for the current database.

## Error 114

Message text

Number of columns does not match SELECT

| Item       | Value                      |
|------------|----------------------------|
| SQLCode    | -114                       |
| Constant   | SQLE_VIEW_DEFINITION_ERROR |
| SQLState   | 53011                      |
| ODBC State | 21S01                      |

Probable cause An INSERT command contains a SELECT with a different number of columns than the INSERT.

## Error 116

Message text Table must be empty

| Item       | Value                    |
|------------|--------------------------|
| SQLCode    | -116                     |
| Constant   | SQLE_TABLE_MUST_BE_EMPTY |
| SQLState   | 55W02                    |
| ODBC State | S1000                    |

Probable cause You have attempted to modify a table, and Sybase IQ can only perform the change if there are no rows in the table.

## Error 118

Message text Table '%1' has no primary key

| Item        | Value  |
|-------------|--|
| SQLCode     | -118   |
| Constant    | SQLE_NO_PRIMARY_KEY                                |
| SQLState    | 55008  |
| ODBC State  | 23000  |
| Parameter 1 | name of the table that does not have a primary key |

Probable cause You have attempted to add a foreign key referring to a table that does not have a primary key. You will need to add a primary key to the named table.

## Error 119

Message text Primary key column '%1' already defined

| Item     | Value                           |
|----------|---------------------------------|
| SQLCode  | -119                            |
| Constant | SQLE_PRIMARY_KEY_COLUMN_DEFINED |
| SQLState | 52009                           |

| Item        | Value   |
|-------------|---|
| ODBC State  | 23000   |
| Parameter 1 | name of the column that is already in the primary key |

Probable cause You have listed the same column name twice in the definition of a primary key.

## Error 120

Message text User '%1' already has grant permission

| Item        | Value  |
|-------------|--|
| SQLCode     | -120   |
| Constant    | SQLE_ALREADY_HAS_GRANT_PERMS                       |
| SQLState    | 42W01  |
| ODBC State  | 42000  |
| Parameter 1 | name of the user that already has GRANT permission |

Probable cause The SQL GRANT command is attempting to give a user GRANT permission and that user already has GRANT permission.

## Error 121

Message text Do not have permission to %1

| Item              | Value   |
|-------------------|---|
| SQLCode           | -121  |
| Constant          | SQLE_PERMISSION_DENIED                        |
| SQLState          | 42501   |
| Sybase error code | 262   |
| ODBC State        | 42000   |
| Parameter 1       | description of the type of permission lacking |

Probable cause You do not have the required permission to do the specified action. You have not been granted permission to use a table belonging to another user ID.

## Error 122

Message text Operation would cause a group cycle

| Item       | Value            |
|------------|------------------|
| SQLCode    | -122             |
| Constant   | SQLE_GROUP_CYCLE |
| SQLState   | 42W02            |
| ODBC State | 42000            |

Probable cause You have tried to add a member to group that would result in a member belonging to itself (perhaps indirectly).

## Error 123

Message text User '%1' is not a user group

| Item        | Value                                |
|-------------|--------------------------------------|
| SQLCode     | -123                                 |
| Constant    | SQLE_NOT_A_GROUP                     |
| SQLState    | 42W03                                |
| ODBC State  | 42000                                |
| Parameter 1 | name of user you thought was a group |

Probable cause You have tried to add a member to group, but the group specified has not been granted the GROUP special privilege.

## Error 124

Message text More columns are being dropped from table %1 than are defined

| Item       | Value                         |
|------------|-------------------------------|
| SQLCode    | -124                          |
| Constant   | SQLE_TOO_MANY_COLUMNS_DELETED |
| SQLState   | 42W44                         |
| ODBC State | 42000                         |

Probable cause The number of columns in a table can never fall below one. Your ALTER TABLE has more drop/delete column clauses than the current number of columns in the table.

## Error 125

Message text

ALTER clause conflict

| Item       | Value                      |
|------------|----------------------------|
| SQLCode    | -125                       |
| Constant   | SQLE_ALTER_CLAUSE_CONFLICT |
| SQLState   | 53W01                      |
| ODBC State | S1000                      |

Probable cause

A primary key clause, foreign key clause, or a uniqueness clause must be the only clause of an ALTER TABLE command.

## Error 126

Message text

Table cannot have two primary keys

| Item       | Value                  |
|------------|------------------------|
| SQLCode    | -126                   |
| Constant   | SQLE_PRIMARY_KEY_TWICE |
| SQLState   | 52W05                  |
| ODBC State | 23000                  |

Probable cause

You have specified the primary key twice in a CREATE TABLE command.

## Warning 127

Message text

An input character could not be converted to database character set and simple substitution took place

| Item              | Value                                  |
|-------------------|--|
| SQLCODE           | 127                                    |
| Constant          | SQLE_INPUT_SIMPLE_SUBSTITUTION_WARNING |
| SQLSTATE          | 01WC3                                  |
| Sybase error code | 13896                                  |
| ODBC 2 State      | 01000                                  |
| ODBC 3 State      | 01000                                  |

**Probable cause** While the server was performing character set conversion on an input string, some character(s) could not be represented in the database character set. Those character(s) were substituted. See documentation on the `ON_CHARSET_CONVERSION_FAILURE` option.

## Error 127

**Message text** Cannot alter a column in an index

| Item              | Value                 |
|-------------------|-----------------------|
| SQLCode           | -127                  |
| Constant          | SQL_E_COLUMN_IN_INDEX |
| SQLState          | 53W05                 |
| Sybase error code | 4939                  |
| ODBC State        | S1000                 |

**Probable cause** You may have attempted to delete or modify the definition of a column that is part of a primary or foreign key. You may have attempted to delete a column that has an index on it. In this case, `DROP` the index or key, perform the `ALTER` statement, and then add the index or key again.

## Error 128

**Message text** Cannot drop a user that owns tables in runtime engine

| Item       | Value                  |
|------------|------------------------|
| SQLCode    | -128                   |
| Constant   | SQL_E_USER_OWNS_TABLES |
| SQLState   | 55W03                  |
| ODBC State | 42000                  |

**Probable cause** This error is reported by the runtime engine if you attempt to drop a user that owns tables. Because this operation would result in dropping tables, and the runtime engine cannot drop tables, it is not allowed. Use the full engine.

## Error 130

Message text

Invalid statement

| Item       | Value                  |
|------------|------------------------|
| SQLCode    | -130                   |
| Constant   | SQLE_INVALID_STATEMENT |
| SQLState   | 07W02                  |
| ODBC State | S1000                  |

Probable cause

The statement identifier (generated by PREPARE) passed to the database for a further operation is invalid.

## Error 131

Message text

Syntax error near '%1'

| Item        | Value   |
|-------------|---|
| SQLCode     | -131  |
| Constant    | SQLE_SYNTAX_ERROR   |
| SQLState    | 42W04   |
| ODBC State  | 42000   |
| Parameter 1 | the word or symbol where the syntax error has been detected |

Probable cause

The database engine cannot understand the command you are trying to execute. If you have used a keyword (such as DATE) for a column name, try enclosing the keyword in quotation marks ("DATE").

## Error 132

Message text

SQL statement error

| Item       | Value                |
|------------|----------------------|
| SQLCode    | -132                 |
| Constant   | SQLE_STATEMENT_ERROR |
| SQLState   | 26501                |
| ODBC State | S1000                |

Probable cause

The statement identifier (generated by PREPARE) passed to the database for a further operation is invalid.

**Error 133**

Message text

Invalid prepared statement type

| Item       | Value                       |
|------------|-----------------------------|
| SQLCode    | -133                        |
| Constant   | SQLE_INVALID_STATEMENT_TYPE |
| SQLState   | 07W03                       |
| ODBC State | S1000                       |

Probable cause

This is an internal C language interface error. If it occurs, it should be reported to Sybase IQ technical support.

**Error 134**

Message text

Feature '%1' not implemented

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -134                      |
| Constant    | SQLE_NOT_IMPLEMENTED      |
| SQLState    | 0A000                     |
| ODBC State  | S1000                     |
| Parameter 1 | the unimplemented feature |

Probable cause

The requested operation or feature is not implemented in Sybase IQ.

**Error 135**

Message text

Language extension

| Item       | Value                   |
|------------|-------------------------|
| SQLCode    | -135                    |
| Constant   | SQLE_LANGUAGE_EXTENSION |
| SQLState   | 0AW01                   |
| ODBC State | S1000                   |

Probable cause

The requested operation is valid in some versions of SQL, but not in Sybase IQ.

## Error 136

Message text Table '%1' is in an outer join cycle

| Item        | Value                        |
|-------------|------------------------------|
| SQLCode     | -136                         |
| Constant    | SQLE_OUTER_JOIN_CYCLE        |
| SQLState    | 52W14                        |
| ODBC State  | 42000                        |
| Parameter 1 | name of a table in the cycle |

Probable cause You have specified outer joins that create a cycle of tables.

## Error 137

Message text Table '%1' requires a unique correlation name

| Item        | Value  |
|-------------|--|
| SQLCode     | -137   |
| Constant    | SQLE_CORRELATION_NAME_NEEDED                           |
| SQLState    | 52W15  |
| ODBC State  | 42000  |
| Parameter 1 | name of the table that needs a unique correlation name |

Probable cause You have specified a join that joins a table to itself. You need to use unique correlation names in order to have multiple instances of a table.

## Error 138

Message text Dbspace '%1' not found

| Item        | Value                                       |
|-------------|---|
| SQLCode     | -138  |
| Constant    | SQLE_DBSPACE_NOT_FOUND                      |
| SQLState    | 52W13                                       |
| ODBC State  | 42S02                                       |
| Parameter 1 | name of the dbspace that could not be found |

Probable cause The named dbspace was not found.

## Error 139

Message text

More than one table is identified as '%1'

| Item        | Value                           |
|-------------|---------------------------------|
| SQLCode     | -139                            |
| Constant    | SQLE_CORRELATION_NAME_AMBIGUOUS |
| SQLState    | 52012                           |
| ODBC State  | SG001                           |
| Parameter 1 | ambiguous correlation name      |

Probable cause

You have identified two tables in the same FROM clause with the same correlation name.

## Error 140

Message text

Userid '%1' does not exist

| Item        | Value                                       |
|-------------|---|
| SQLCode     | -140  |
| Constant    | SQLE_UNKNOWN_USERID                         |
| SQLState    | 08004                                       |
| ODBC State  | 28000                                       |
| Parameter 1 | name of the user ID that could not be found |

Probable cause

The specified user ID does not exist.

## Error 141

Message text

Table '%1' not found

| Item        | Value                                     |
|-------------|---|
| SQLCode     | -141                                      |
| Constant    | SQLE_TABLE_NOT_FOUND                      |
| SQLState    | 42W33                                     |
| ODBC State  | 42S02                                     |
| Parameter 1 | name of the table that could not be found |

**Probable cause** You have misspelled the name of a table, or you have connected with a different user ID and forgotten to qualify a table name with a user name. For example, you might have referred to employee instead of “DBA”.employee,

## **Error 142**

**Message text** Correlation name '%1' not found

| <b>Item</b> | <b>Value</b>                         |
|-------------|--------------------------------------|
| SQLCode     | -142                                 |
| Constant    | SQLE_CORRELATION_NAME_NOT_FOUND      |
| SQLState    | 52W02                                |
| ODBC State  | 42S02                                |
| Parameter 1 | name of the invalid correlation name |

**Probable cause** You have misspelled a correlation name, or you have used a table name instead of the correlation name.

## **Error 143**

**Message text** Column '%1' not found

| <b>Item</b> | <b>Value</b>                               |
|-------------|--|
| SQLCode     | -143                                       |
| Constant    | SQLE_COLUMN_NOT_FOUND                      |
| SQLState    | 52003                                      |
| ODBC State  | 42S22                                      |
| Parameter 1 | name of the column that could not be found |

**Probable cause** You have misspelled the name of a column, or the column you are looking for is in a different table.

## **Error 144**

**Message text** Column '%1' found in more than one table-- need a correlation name

| <b>Item</b> | <b>Value</b> |
|-------------|--------------|
| SQLCode     | -144         |

| Item        | Value                        |
|-------------|------------------------------|
| Constant    | SQLE_COLUMN_AMBIGUOUS        |
| SQLState    | 52002                        |
| ODBC State  | SJS01                        |
| Parameter 1 | name of the ambiguous column |

Probable cause

You have not put a correlation name on a column that is found in more than one of the tables referenced in a query. You need to add a correlation name to the reference.

## Error 145

Message text

Foreign key name '%1' not found

| Item        | Value                                |
|-------------|--------------------------------------|
| SQLCode     | -145                                 |
| Constant    | SQLE_FOREIGN_KEY_NAME_NOT_FOUND      |
| SQLState    | 52W07                                |
| ODBC State  | 42000                                |
| Parameter 1 | name of the non-existing foreign key |

Probable cause

You have misspelled the name of a foreign key or the foreign key does not exist.

## Error 146

Message text

There is no way to join '%1' to '%2'

| Item        | Value                                      |
|-------------|--|
| SQLCode     | -146                                       |
| Constant    | SQLE_CANNOT_JOIN                           |
| SQLState    | 53W04                                      |
| ODBC State  | 42000                                      |
| Parameter 1 | name of first table that cannot be joined  |
| Parameter 2 | name of second table that cannot be joined |

**Probable cause** You have attempted a KEY JOIN between two tables and there is no foreign key on one of the tables that references the primary key of the other table; or you have attempted a NATURAL JOIN between two tables and the tables have no common column names.

## Error 147

**Message text** There is more than one way to join '%1' to '%2'

| Item        | Value                                      |
|-------------|--|
| SQLCode     | -147                                       |
| Constant    | SQLE_AMBIGUOUS_JOIN                        |
| SQLState    | 52W08                                      |
| ODBC State  | 42000                                      |
| Parameter 1 | name of first table that cannot be joined  |
| Parameter 2 | name of second table that cannot be joined |

**Probable cause** There are two or more foreign keys relating the two tables and you are attempting to KEY JOIN the two tables. Either there are two foreign keys from the first table to the second table, or each table has a foreign key to the other table. You must use a correlation name for the primary key table which is the same as the role name of the desired foreign key relationship.

## Error 148

**Message text** Unknown function '%1'

| Item        | Value   |
|-------------|---|
| SQLCode     | -148  |
| Constant    | SQLE_UNKNOWN_FUNC                             |
| SQLState    | 42W05   |
| ODBC State  | 42000   |
| Parameter 1 | function name that is not a database function |

**Probable cause** You have misspelled the name of a database function (such as MAXIMUM instead of MAX) in a query definition or in a query column name.

## Error 149

Message text

Function or column reference to '%1' in the select list must also appear in a GROUP BY

| Item        | Value  |
|-------------|--|
| SQLCode     | -149   |
| Constant    | SQLE_INVALID_GROUP_SELECT  |
| SQLState    | 53003  |
| ODBC State  | 42000  |
| Parameter 1 | name of the column referenced directly, or in an expression, that must be in the GROUP BY clause |

Probable cause

In a query using GROUP BY, select list items that are not aggregate functions must also appear in the GROUP BY clause. If the select list item is a column reference or an alias, simply add the column name or alias to the GROUP BY clause. If the select list item is a scalar function, ensure that the function's arguments in the GROUP BY clause match exactly with those in the select list. In some cases, you may want to use the MAX function on the column name (or another aggregate function) instead of adding the column to the GROUP BY clause.

## Error 150

Message text

Aggregate functions not allowed on this statement

| Item       | Value                       |
|------------|-----------------------------|
| SQLCode    | -150                        |
| Constant   | SQLE_AGGREGATES_NOT_ALLOWED |
| SQLState   | 42W06                       |
| ODBC State | 42000                       |

Probable cause

An UPDATE statement has used an aggregate function (MIN, MAX, SUM, AVG, COUNT, STDDEV, or VARIANCE).

## Error 151

Message text

Subquery allowed only one select list item

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -151                      |
| Constant   | SQLE_SUBQUERY_SELECT_LIST |
| SQLState   | 53023                     |
| ODBC State | 42000                     |

Probable cause You have entered a subquery which has more than one column in the select list. Change the select list to have only one column.

## Error 152

Message text Number in ORDER BY is too large

| Item       | Value              |
|------------|--------------------|
| SQLCode    | -152               |
| Constant   | SQLE_INVALID_ORDER |
| SQLState   | 53005              |
| ODBC State | 42000              |

Probable cause You have used an integer in an ORDER BY list and the integer is larger than the number of columns in the select list.

## Error 153

Message text SELECT lists in UNION do not match in length

| Item       | Value              |
|------------|--------------------|
| SQLCode    | -153               |
| Constant   | SQLE_INVALID_UNION |
| SQLState   | 53026              |
| ODBC State | 42000              |

Probable cause You have specified a UNION but the SELECT statements involved in the union do not have the same number of columns in the select list.

## Error 154

Message text Wrong number of parameters to function '%1'

| Item        | Value                      |
|-------------|----------------------------|
| SQLCode     | -154                       |
| Constant    | SQLE_WRONG_PARAMETER_COUNT |
| SQLState    | 37505                      |
| ODBC State  | 42000                      |
| Parameter 1 | name of the function       |

Probable cause You have supplied an incorrect number of parameters to a database function.

## Error 155

Message text Invalid host variable

| Item       | Value                 |
|------------|-----------------------|
| SQLCode    | -155                  |
| Constant   | SQLE_VARIABLE_INVALID |
| SQLState   | 42W07                 |
| ODBC State | 42000                 |

Probable cause A host variable supplied to the database using the C language interface as either a host variable or through an SQLDA is invalid.

## Error 156

Message text Invalid expression near '%1'

| Item        | Value                  |
|-------------|------------------------|
| SQLCode     | -156                   |
| Constant    | SQLE_EXPRESSION_ERROR  |
| SQLState    | 42W08                  |
| ODBC State  | 42000                  |
| Parameter 1 | the invalid expression |

Probable cause You have an expression which the database engine cannot understand. For example, you might have tried to add two dates.

## Error 157

Message text

Cannot convert %1 to a %2

| Item        | Value                                   |
|-------------|---|
| SQLCode     | -157                                    |
| Constant    | SQLE_CONVERSION_ERROR                   |
| SQLState    | 53018                                   |
| ODBC State  | 07006                                   |
| Parameter 1 | the value that could not be converted   |
| Parameter 2 | the name of the type for the conversion |

Probable cause

An invalid value has been supplied to or fetched from the database. For example, the value 12X might have been supplied where a number was required.

## Error 158

Message text

Value %1 out of range for destination

| Item        | Value                              |
|-------------|------------------------------------|
| SQLCode     | -158                               |
| Constant    | SQLE_OVERFLOW_ERROR                |
| SQLState    | 22003                              |
| ODBC State  | 22003                              |
| Parameter 1 | the value that caused the overflow |

Probable cause

A value has been supplied to the database or retrieved from the database that is out of range for the destination column or host variable. For example, the value 10 may have been supplied for a DECIMAL(3,2) field.

## Error 159

Message text

Invalid column number

| Item       | Value                      |
|------------|----------------------------|
| SQLCode    | -159                       |
| Constant   | SQLE_INVALID_COLUMN_NUMBER |
| SQLState   | 42W13                      |
| ODBC State | S1000                      |

Probable cause                    The column number in a GET DATA command is invalid.

## Error 160

Message text                    Can only describe a SELECT statement

| Item       | Value                    |
|------------|--------------------------|
| SQLCode    | -160                     |
| Constant   | SQLE_DESCRIBE_NONSELECT  |
| SQLState   | 07005                    |
| ODBC State | (handled by ODBC driver) |

Probable cause                    In the C language interface, you attempted to describe the select list of a statement other than a SELECT statement.

## Error 161

Message text                    Invalid type on DESCRIBE statement

| Item       | Value                      |
|------------|----------------------------|
| SQLCode    | -161                       |
| Constant   | SQLE_INVALID_DESCRIBE_TYPE |
| SQLState   | 07W01                      |
| ODBC State | (handled by ODBC driver)   |

Probable cause                    This is an internal C language interface error. If it occurs, it should be reported to Sybase IQ technical support.

## Error 162

Message text                    Cannot outer join a view with a UNION or GROUP BY

| Item       | Value                  |
|------------|------------------------|
| SQLCode    | -162                   |
| Constant   | SQLE_CANNOT_OUTER_JOIN |
| SQLState   | 52W19                  |
| ODBC State | 42000                  |

Probable cause            A view that contains a UNION or view cannot be used on the right of a LEFT OUTER JOIN or on the left of a RIGHT OUTER JOIN.

## Error 170

Message text            Cursor has not been declared

| Item       | Value                    |
|------------|--------------------------|
| SQLCode    | -170                     |
| Constant   | SQLE_CURSOR_NOT_DECLARED |
| SQLState   | 24W01                    |
| ODBC State | 24000                    |

Probable cause            You attempted to OPEN a cursor that has not been declared.

## Error 171

Message text            Error opening cursor

| Item       | Value                  |
|------------|------------------------|
| SQLCode    | -171                   |
| Constant   | SQLE_OPEN_CURSOR_ERROR |
| SQLState   | 07003                  |
| ODBC State | 24000                  |

Probable cause            You have attempted to open a cursor on a statement that is not a SELECT statement or a CALL statement.

## Error 172

Message text            Cursor already open

| Item       | Value                    |
|------------|--------------------------|
| SQLCode    | -172                     |
| Constant   | SQLE_CURSOR_ALREADY_OPEN |
| SQLState   | 24502                    |
| ODBC State | 24000                    |

Probable cause            You attempted to OPEN a cursor that is already open.

**Error 180**

Message text

Cursor not open

| Item       | Value                |
|------------|----------------------|
| SQLCode    | -180                 |
| Constant   | SQLE_CURSOR_NOT_OPEN |
| SQLState   | 24501                |
| ODBC State | 34000                |

Probable cause

You attempted to OPEN a cursor that has not been declared.

**Error 181**

Message text

No indicator variable provided for NULL result

| Item       | Value             |
|------------|-------------------|
| SQLCode    | -181              |
| Constant   | SQLE_NO_INDICATOR |
| SQLState   | 22002             |
| ODBC State | S1000             |

Probable cause

You tried to retrieve a value from the database that was the NULL value but you did not provide an indicator variable for that value.

**Error 182**

Message text

Not enough fields allocated in SQLDA

| Item       | Value                |
|------------|----------------------|
| SQLCode    | -182                 |
| Constant   | SQLE_SQLDA_TOO_SMALL |
| SQLState   | 07002                |
| ODBC State | 07002                |

Probable cause

There are not enough fields in the SQLDA to retrieve all of the values requested.

## Error 183

Message text

Cannot find index named '%1'

| Item        | Value                                  |
|-------------|--|
| SQLCode     | -183                                   |
| Constant    | SQLE_INDEX_NOT_FOUND                   |
| SQLState    | 52W03                                  |
| ODBC State  | 42S12                                  |
| Parameter 1 | name of the index that cannot be found |

Probable cause

A DROP INDEX command has named an index that does not exist. Check for spelling errors or whether the index name must be qualified by a user ID.

## Error 184

Message text

Error inserting into cursor

| Item       | Value                 |
|------------|-----------------------|
| SQLCode    | -184                  |
| Constant   | SQLE_PUT_CURSOR_ERROR |
| SQLState   | 09W01                 |
| ODBC State | S1000                 |

Probable cause

An error has occurred while inserting into a cursor.

## Error 185

Message text

SELECT returns more than one row

| Item       | Value                 |
|------------|-----------------------|
| SQLCode    | -185                  |
| Constant   | SQLE_TOO_MANY_RECORDS |
| SQLState   | 21000                 |
| ODBC State | S1000                 |

Probable cause

An Embedded SELECT statement that does not use a cursor returns more than one result.

**Error 186**

Message text

Subquery cannot return more than one result

| Item       | Value                           |
|------------|---------------------------------|
| SQLCode    | -186                            |
| Constant   | SQLE_SUBQUERY_RESULT_NOT_UNIQUE |
| SQLState   | 21W01                           |
| ODBC State | 42000                           |

Probable cause

The result of a subquery contains more than one row. If the subquery is in the WHERE clause, you might be able to use IN.

**Error 187**

Message text

Invalid operation for this cursor

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -187                      |
| Constant   | SQLE_CURSOROP_NOT_ALLOWED |
| SQLState   | 09W02                     |
| ODBC State | 24000                     |

Probable cause

An operation that is not allowed was attempted on a cursor.

**Error 188**

Message text

Not enough values for host variables

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -188                      |
| Constant   | SQLE_NOT_ENOUGH_HOST_VARS |
| SQLState   | 07001                     |
| ODBC State | 07002                     |

Probable cause

You have not provided enough host variables for either the number of bind variables, or the command, or the number of select list items.

## Error 189

Message text

Unable to find in index '%1' for table '%2'

| Item        | Value                                      |
|-------------|--|
| SQLCode     | -189                                       |
| Constant    | SQLE_NOT_FOUND_IN_INDEX                    |
| SQLState    | WI005                                      |
| ODBC State  | S1000                                      |
| Parameter 1 | name of invalid index                      |
| Parameter 2 | name of table containing the invalid index |

Probable cause

This is a Sybase IQ internal error and should be reported to Sybase IQ technical support. You should be able to work around the error by dropping and recreating the index.

## Error 190

Message text

Cannot update an expression

| Item       | Value                      |
|------------|----------------------------|
| SQLCode    | -190                       |
| Constant   | SQLE_NON_UPDATEABLE_COLUMN |
| SQLState   | 53W02                      |
| ODBC State | 42000                      |

Probable cause

You have tried to update a column in a query that is a database expression rather than a column in a table.

## Error 191

Message text

Cannot modify column '%1' in table '%2'

| Item        | Value                                     |
|-------------|---|
| SQLCode     | -191                                      |
| Constant    | SQLE_CANNOT_MODIFY                        |
| SQLState    | 42W32                                     |
| ODBC State  | 42000                                     |
| Parameter 1 | name of the column that cannot be changed |
| Parameter 2 | name of the table containing the column   |

**Probable cause** You do not have permission to modify the column, or the table is actually a view and the column in the view is defined as an expression (such as column1+column2) that cannot be modified.

## Error 192

**Message text** Update operation attempted on non-updatable query

| Item       | Value                    |
|------------|--------------------------|
| SQLCode    | -192                     |
| Constant   | SQLE_NON_UPDATEABLE_VIEW |
| SQLState   | 42W31                    |
| ODBC State | 42000                    |

**Probable cause** You have attempted an insert or delete operation on a query that is implicitly read-only. An updatable query may not contain DISTINCT, GROUP BY, HAVING, or UNION, nor may it contain aggregate functions or involve a join. If the query references a view then the query expression that defines the view must itself be updatable.

## Error 193

**Message text** Primary key for table '%1' is not unique

| Item        | Value  |
|-------------|--|
| SQLCode     | -193   |
| Constant    | SQLE_PRIMARY_KEY_NOT_UNIQUE                      |
| SQLState    | 23W01  |
| ODBC State  | 23000  |
| Parameter 1 | name of the table where the problem was detected |

**Probable cause** You have tried to add a new row to a table where the new row has the same primary key as an existing row. The database has not added the incorrect row to the database. For example, you might have added a student with student number 86004 and there is already a row for a student with that number.

## Error 194

Message text

No primary key value for foreign key '%1' in table '%2'

| Item        | Value                                  |
|-------------|--|
| SQLCode     | -194                                   |
| Constant    | SQLE_INVALID_FOREIGN_KEY               |
| SQLState    | 23503                                  |
| ODBC State  | 23000                                  |
| Parameter 1 | name of the foreign key                |
| Parameter 2 | name of the table with the foreign key |

Probable cause

You have tried to insert or update a row that has a foreign key for another table, and the value for the foreign key is not NULL and there is not a corresponding value in the primary key

## Error 195

Message text

Column '%1' in table '%2' cannot be NULL

| Item        | Value                                   |
|-------------|---|
| SQLCode     | -195                                    |
| Constant    | SQLE_COLUMN_CANNOT_BE_NULL              |
| SQLState    | 23502                                   |
| ODBC State  | 23000                                   |
| Parameter 1 | name of the column that cannot be NULL  |
| Parameter 2 | name of the table containing the column |

Probable cause

You have not supplied a value where a value is required. The column definition prohibits NULL values or the column is part of a NOT NULL foreign key.

## Error 196

Message text

Index '%1' for table '%2' would not be unique

| Item       | Value                 |
|------------|-----------------------|
| SQLCode    | -196                  |
| Constant   | SQLE_INDEX_NOT_UNIQUE |
| SQLState   | 23505                 |
| ODBC State | 23000                 |

| Item        | Value                                      |
|-------------|--|
| Parameter 1 | name of the index that would not be unique |
| Parameter 2 | name of the table that contains the index  |

**Probable cause** You have inserted or updated a row that has the same value as another row in some column, and there is a constraint that does not allow two rows to have the same value in that column.

## Error 197

**Message text** No current row of cursor

| Item       | Value               |
|------------|---------------------|
| SQLCode    | -197                |
| Constant   | SQLE_NO_CURRENT_ROW |
| SQLState   | 24503               |
| ODBC State | 24000               |

**Probable cause** You have attempted to perform an operation on the current row of a cursor, but there is no current row. The cursor is before the first row of the cursor, after the last row or is on a row that has since been deleted.

## Error 198

**Message text** Primary key for row in table '%1' is referenced in another table

| Item        | Value   |
|-------------|---|
| SQLCode     | -198  |
| Constant    | SQLE_PRIMARY_KEY_VALUE_REF                                  |
| SQLState    | 23W05   |
| ODBC State  | 23000   |
| Parameter 1 | the name of the table with a primary key that is referenced |

**Probable cause** You have attempted to delete or modify a primary key that is referenced elsewhere in the database.

## Error 199

Message text

INSERT/DELETE on cursor can modify only one table

| Item       | Value               |
|------------|---------------------|
| SQLCode    | -199                |
| Constant   | SQLE_ONLY_ONE_TABLE |
| SQLState   | 09W04               |
| ODBC State | 42000               |

Probable cause

You have attempted to INSERT into a cursor and have specified values for more than one table; or you have tried to DELETE from a cursor that involves a join. INSERT into one table at a time. For DELETE, use the FROM clause to specify which table you wish to delete from.

## Warning 200

Message text

Warning

| Item       | Value                    |
|------------|--------------------------|
| SQLCode    | 200                      |
| Constant   | SQLE_WARNING             |
| SQLState   | 01000                    |
| ODBC State | (handled by ODBC driver) |

Probable cause

A warning has occurred. The warning message will indicate the condition that caused the warning.

## Error 200

Message text

Invalid option '%1'-- no PUBLIC setting exists

| Item        | Value                      |
|-------------|----------------------------|
| SQLCode     | -200                       |
| Constant    | SQLE_INVALID_OPTION        |
| SQLState    | 42W16                      |
| ODBC State  | 42000                      |
| Parameter 1 | name of the invalid option |

**Probable cause** You have probably misspelled the name of an option in the SET OPTION command. You can only define an option for a user if the database administrator has supplied a PUBLIC value for that option.

## Error 201

**Message text** Invalid setting for option '%1'

| Item        | Value                       |
|-------------|-----------------------------|
| SQLCode     | -201                        |
| Constant    | SQLE_INVALID_OPTION_SETTING |
| SQLState    | 42W17                       |
| ODBC State  | 42000                       |
| Parameter 1 | name of the invalid option  |

**Probable cause** You supplied an invalid value for an option in the SET command. Some options only allow numeric values or values in a defined range, while other options only allow the values ON and OFF.

## Error 202

**Message text** Only PUBLIC settings are allowed for option '%1'

| Item        | Value              |
|-------------|--------------------|
| SQLCode     | -202               |
| Constant    | SQLE_NOT_PUBLIC_ID |
| SQLState    | 42W43              |
| ODBC State  | 42000              |
| Parameter 1 | name of the option |

**Probable cause** The option specified in the SET OPTION command is PUBLIC only. You cannot define this option for any other user.

## Error 203

**Message text** Cannot set a temporary option for user '%1'

| Item    | Value |
|---------|-------|
| SQLCode | -203  |

| Item        | Value                                  |
|-------------|--|
| Constant    | SQLE_TEMPORARY_NOT_ALLOWED             |
| SQLState    | 42W45                                  |
| ODBC State  | 42000                                  |
| Parameter 1 | user ID whose option was to be changed |

Probable cause

TEMPORARY options are set on a connection basis. To change an option for another user, do not specify TEMPORARY in the SET OPTION statement.

## Error 204

Message text

Only the DBA can set the option %1

| Item       | Value                    |
|------------|--------------------------|
| SQLCode    | -204                     |
| Constant   | SQLE_OPTION_REQUIRES_DBA |
| SQLState   | 42W46                    |
| ODBC State | 42000                    |

Probable cause

The option specified in the SET OPTION command can only be set by a user having DBA authority.

## Error 205

Message text

Integrated logons are not permitted

| Item       | Value                       |
|------------|-----------------------------|
| SQLCode    | -205                        |
| Constant   | SQLE_INVALID_STANDARD_LOGON |
| SQLState   | 28W02                       |
| ODBC State | 28000                       |

Probable cause

The database option LOGIN\_MODE is set to Integrated, and the user has attempted a standard logon.

## Error 206

Message text

Standard logons are not permitted

| Item       | Value                         |
|------------|-------------------------------|
| SQLCode    | -206                          |
| Constant   | SQLE_INVALID_INTEGRATED_LOGON |
| SQLState   | 28W03                         |
| ODBC State | 28000                         |

Probable cause                      The database option LOGIN\_MODE is set to Integrated, and the user has attempted a standard logon.

## Error 207

Message text                        Wrong number of values for INSERT

| Item       | Value                         |
|------------|-------------------------------|
| SQLCode    | -207                          |
| Constant   | SQLE_WRONG_NUM_OF_INSERT_COLS |
| SQLState   | 53002                         |
| ODBC State | 42000                         |

Probable cause                      The number of values you are trying to insert does not match the number of columns specified in the INSERT command, or the number of columns in the table if no columns are specified.

## Error 208

Message text                        Row has changed since last read-- operation cancelled

| Item       | Value                       |
|------------|-----------------------------|
| SQLCode    | -208                        |
| Constant   | SQLE_ROW_UPDATED_SINCE_READ |
| SQLState   | 22W02                       |
| ODBC State | (handled by ODBC driver)    |

Probable cause                      You have done a UPDATE (positioned) or DELETE (positioned) on a cursor declared as a SCROLL cursor, and the row you are changing has been updated since you read it. This prevents the 'lost update' problem.

## Error 209

Message text

Invalid value for column '%1' in table '%2'

| Item        | Value   |
|-------------|---|
| SQLCode     | -209  |
| Constant    | SQLE_INVALID_COLUMN_VALUE                             |
| SQLState    | 23506   |
| ODBC State  | 23000   |
| Parameter 1 | name of the column that was assigned an invalid value |
| Parameter 2 | name of the table containing the column               |

Probable cause

An INSERT has specified a value for a column that violates a CHECK constraint, and the INSERT was not done because of the error. Note that a CHECK constraint is violated if it evaluates to FALSE; it is not violated if it evaluates to TRUE or UNKNOWN.

## Error 210

Message text

User '%1' has the row in '%2' locked

| Item        | Value                           |
|-------------|---------------------------------|
| SQLCode     | -210                            |
| Constant    | SQLE_LOCKED                     |
| SQLState    | 42W18                           |
| ODBC State  | 40001                           |
| Parameter 1 | name of another user            |
| Parameter 2 | table which generates the error |

Probable cause

You have attempted to read or write a row and it is locked by another user. You also receive this error if you try to drop a global temporary table while another user is using it. Note that this error will only be received if the database option BLOCKING is set to OFF. Otherwise, the requesting transaction will block until the row lock is released.

## Error 211

Message text

Not allowed while %1 is using the database

| Item       | Value                        |
|------------|------------------------------|
| SQLCode    | -211                         |
| Constant   | SQLE_MUST_BE_ONLY_CONNECTION |
| SQLState   | 42W19                        |
| ODBC State | 40001                        |

Probable cause You have attempted a data definition language operation that cannot be completed while another is connected.

## Error 212

Message text CHECKPOINT command requires a rollback log

| Item       | Value                         |
|------------|-------------------------------|
| SQLCode    | -212                          |
| Constant   | SQLE_CHECKPOINT_REQUIRES_UNDO |
| SQLState   | 42W20                         |
| ODBC State | 40001                         |

Probable cause You cannot use a CHECKPOINT command when the database engine is running in bulk mode without a rollback log.

## Error 213

Message text Savepoints require a rollback log

| Item       | Value                        |
|------------|------------------------------|
| SQLCode    | -213                         |
| Constant   | SQLE_SAVEPOINTS_REQUIRE_UNDO |
| SQLState   | 3BW01                        |
| ODBC State | S1000                        |

Probable cause You cannot use savepoints when the database engine is running in bulk mode without a rollback log.

## Error 214

Message text Table in use

| Item       | Value             |
|------------|-------------------|
| SQLCode    | -214              |
| Constant   | SQLE_TABLE_IN_USE |
| SQLState   | 42W21             |
| ODBC State | 40001             |

Probable cause

You have attempted to ALTER or DROP a table that is being used by other active users of the database.

## Error 215

Message text

Procedure in use

| Item       | Value                 |
|------------|-----------------------|
| SQLCode    | -215                  |
| Constant   | SQLE_PROCEDURE_IN_USE |
| SQLState   | 42W23                 |
| ODBC State | 40001                 |

Probable cause

You have attempted to DROP a procedure that is being used by other active users of the database.

## Error 220

Message text

Savepoint '%1' not found

| Item        | Value                   |
|-------------|-------------------------|
| SQLCode     | -220                    |
| Constant    | SQLE_SAVEPOINT_NOTFOUND |
| SQLState    | 3B001                   |
| ODBC State  | S1000                   |
| Parameter 1 | name of savepoint       |

Probable cause

You attempted to rollback to a savepoint that does not exist.

**Error 221**

Message text

ROLLBACK TO SAVEPOINT not allowed

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -221                      |
| Constant   | SQLE_ROLLBACK_NOT_ALLOWED |
| SQLState   | 3B002                     |
| ODBC State | S1000                     |

Probable cause

A ROLLBACK TO SAVEPOINT within an atomic operation is not allowed to a savepoint established before the atomic operation.

**Error 222**

Message text

Result set not allowed from within an atomic compound statement

| Item       | Value                   |
|------------|-------------------------|
| SQLCode    | -222                    |
| Constant   | SQLE_RESULT_NOT_ALLOWED |
| SQLState   | 3BW02                   |
| ODBC State | S1000                   |

Probable cause

A SELECT statement with no INTO clause or a RESULT CURSOR statement are not allowed within an atomic compound statement.

**Error 230**

Message text

Sqlpp/dblib version mismatch

| Item       | Value                  |
|------------|------------------------|
| SQLCode    | -230                   |
| Constant   | SQLE_PP_DBLIB_MISMATCH |
| SQLState   | 08W18                  |
| ODBC State | 08001                  |

Probable cause

Your executable has source files with Embedded SQL that were preprocessed with a preprocessor that does not match the database interface library.

## Error 231

Message text

Dblib/database engine version mismatch

| Item       | Value                      |
|------------|----------------------------|
| SQLCode    | -231                       |
| Constant   | SQLE_DBLIB_ENGINE_MISMATCH |
| SQLState   | 08W19                      |
| ODBC State | 08001                      |

Probable cause

Your executable uses a database interface library that does not match the version number of the database engine.

## Error 240

Message text

Unknown backup operation

| Item       | Value                         |
|------------|-------------------------------|
| SQLCode    | -240                          |
| Constant   | SQLE_UNKNOWN_BACKUP_OPERATION |
| SQLState   | WB001                         |
| ODBC State | S1000                         |

Probable cause

An invalid backup command operation was specified in a call to db\_backup.

## Error 241

Message text

Database backup not started

| Item       | Value                   |
|------------|-------------------------|
| SQLCode    | -241                    |
| Constant   | SQLE_BACKUP_NOT_STARTED |
| SQLState   | WB002                   |
| ODBC State | S1000                   |

Probable cause

A database backup could not be started. Either you do not have DBA authority, or another backup has started and not completed.

**Error 242**

Message text

Incomplete transactions prevent transaction log renaming

| Item       | Value                             |
|------------|-----------------------------------|
| SQLCode    | -242                              |
| Constant   | SQLE_BACKUP_CANNOT_RENAME_LOG_YET |
| SQLState   | WB003                             |
| ODBC State | S1000                             |

Probable cause

The last page in the transaction log was read by a call to `db_backup`. One or more currently active connections have partially completed transactions, preventing the transaction log file from being renamed. The `db_backup` call should be reissued.

**Error 243**

Message text

Unable to delete database file

| Item       | Value                             |
|------------|-----------------------------------|
| SQLCode    | -243                              |
| Constant   | SQLE_BACKUP_UNABLE_TO_DELETE_FILE |
| SQLState   | WB004                             |
| ODBC State | S1000                             |

Probable cause

The specified file could not be deleted. The filename should not be the same as any database file that is currently in use.

**Error 244**

Message text

Transaction log was truncated

| Item       | Value              |
|------------|--------------------|
| SQLCode    | -244               |
| Constant   | SQLE_LOG_TRUNCATED |
| SQLState   | WB005              |
| ODBC State | S1000              |

**Probable cause** An operation was being performed on the transaction log such as SQL Remote or Replication Agent processing and the transaction log was truncated by an independent backup during that operation.

## Error 245

**Message text** Integrated logon failed

| Item       | Value                        |
|------------|------------------------------|
| SQLCode    | -245                         |
| Constant   | SQLE_INTEGRATED_LOGON_FAILED |
| SQLState   | 28W04                        |
| ODBC State | 28000                        |

**Probable cause** The integrated logon failed, possibly because if the user doesn't have a system account on the server machine, or for other reasons.

## Error 246

**Message text** Integrated logons are not supported for this database

| Item       | Value                             |
|------------|-----------------------------------|
| SQLCode    | -246                              |
| Constant   | SQLE_INTEGRATED_LOGON_UNSUPPORTED |
| SQLState   | 28W05                             |
| ODBC State | 28000                             |

**Probable cause** The current database is an older database and does not have a sys.syslogin table to map integrated login IDs to database user IDs.

## Error 247

**Message text** The integrated loginid guest can only be mapped to the guest database userid

| Item     | Value                          |
|----------|--------------------------------|
| SQLCode  | -247                           |
| Constant | SQLE_INTEGRATED_LOGON_GUESTMAP |
| SQLState | 28W06                          |

| Item       | Value |
|------------|-------|
| ODBC State | 28000 |

Probable cause The DBA attempted to map guest login ID to something other than guest

## Error 248

Message text Cannot map a loginid to the sys or public userid

| Item       | Value                        |
|------------|------------------------------|
| SQLCode    | -248                         |
| Constant   | SQLE_INTEGRATED_LOGON_SYSMAP |
| SQLState   | 28W07                        |
| ODBC State | 28000                        |

Probable cause The DBA attempted to map a login ID to either sys or public.

## Error 249

Message text The loginid '%1' is already mapped to userid '%2'

| Item       | Value                        |
|------------|------------------------------|
| SQLCode    | -249                         |
| Constant   | SQLE_INTEGRATED_LOGON_MAPPED |
| SQLState   | 28W08                        |
| ODBC State | 28000                        |

Probable cause The DBA attempted to map a login ID twice.

## Error 250

Message text Identifier '%1' too long

| Item       | Value                    |
|------------|--------------------------|
| SQLCode    | -250                     |
| Constant   | SQLE_IDENTIFIER_TOO_LONG |
| SQLState   | 54003                    |
| ODBC State | 42000                    |

| Item        | Value                   |
|-------------|-------------------------|
| Parameter 1 | the identifier in error |

Probable cause An identifier is longer than 128 characters.

## Error 251

Message text Foreign key '%1' for table '%2' duplicates an existing foreign key

| Item        | Value                                |
|-------------|--------------------------------------|
| SQLCode     | -251                                 |
| Constant    | SQLE_DUPLICATE_FOREIGN_KEY           |
| SQLState    | 52W06                                |
| ODBC State  | 23000                                |
| Parameter 1 | the role name of the new foreign key |
| Parameter 2 | the table containing the foreign key |

Probable cause You have attempted to define a foreign key that already exists.

## Error 260

Message text Variable '%1' not found

| Item       | Value                   |
|------------|-------------------------|
| SQLCode    | -260                    |
| Constant   | SQLE_VARIABLE_NOT_FOUND |
| SQLState   | 42W14                   |
| ODBC State | 42000                   |

Probable cause You have tried to DROP or SET the value of a SQL variable that was not created or was previously dropped.

## Error 261

Message text There is already a variable named '%1'

| Item    | Value |
|---------|-------|
| SQLCode | -261  |

| Item       | Value                |
|------------|----------------------|
| Constant   | SQLE_VARIABLE_EXISTS |
| SQLState   | 42W15                |
| ODBC State | 42000                |

Probable cause You have tried to CREATE a variable with the name of another variable that already exists.

## Error 262

Message text Label '%1' not found

| Item        | Value                                     |
|-------------|---|
| SQLCode     | -262                                      |
| Constant    | SQLE_LABEL_NOT_FOUND                      |
| SQLState    | 42W24                                     |
| ODBC State  | 42000                                     |
| Parameter 1 | name of the label that could not be found |

Probable cause The label referenced in a LEAVE statement was not found.

## Error 263

Message text Invalid absolute or relative offset in FETCH

| Item       | Value                       |
|------------|-----------------------------|
| SQLCode    | -263                        |
| Constant   | SQLE_INVALID_FETCH_POSITION |
| SQLState   | 42W25                       |
| ODBC State | 42000                       |

Probable cause The offset specified in a FETCH was invalid or NULL.

## Error 264

Message text Wrong number of variables in FETCH

| Item       | Value                             |
|------------|-----------------------------------|
| SQLCode    | -264                              |
| Constant   | SQLE_WRONG_NUM_OF_FETCH_VARIABLES |
| SQLState   | 42W26                             |
| ODBC State | 42000                             |

Probable cause

The number of variables specified in the FETCH statement does not match the number of select list items.

## Error 265

Message text

Procedure '%1' not found

| Item        | Value   |
|-------------|---|
| SQLCode     | -265  |
| Constant    | SQLE_PROCEDURE_NOT_FOUND                      |
| SQLState    | 52W09   |
| ODBC State  | 42S02   |
| Parameter 1 | name of the procedure that could not be found |

Probable cause

You have misspelled the name of a procedure, or you have connected with a different user ID and forgotten to qualify a procedure name with a user name.

## Error 266

Message text

Database was initialized with an older version of the software

| Item       | Value           |
|------------|-----------------|
| SQLCode    | -266            |
| Constant   | SQLE_OLD_DBINIT |
| SQLState   | 42W27           |
| ODBC State | 42000           |

Probable cause

The database is missing some system table definitions required for this statement. These system table definitions are normally created when a database is initialized. The database should be unloaded and reloaded into a database that has been initialized with a newer version of SQL Anywhere or use DBUPGRADE to upgrade the database to the most recent version.

**Error 267**

Message text

COMMIT/ROLLBACK not allowed within atomic operation

| Item       | Value                 |
|------------|-----------------------|
| SQLCode    | -267                  |
| Constant   | SQLE_ATOMIC_OPERATION |
| SQLState   | 42W28                 |
| ODBC State | 42000                 |

Probable cause

A COMMIT or ROLLBACK statement was encountered while executing within an atomic operation.

**Error 268**

Message text

Trigger '%1' not found

| Item        | Value                                    |
|-------------|--|
| SQLCode     | -268                                     |
| Constant    | SQLE_TRIGGER_NOT_FOUND                   |
| SQLState    | 52W10                                    |
| ODBC State  | 42S02                                    |
| Parameter 1 | name of the trigger that cannot be found |

Probable cause

You have misspelled the name of a trigger, or you have connected with a different user ID and forgotten to qualify a trigger name with a user name.

**Error 269**

Message text

Cannot delete a column referenced in a trigger definition

| Item       | Value                  |
|------------|------------------------|
| SQLCode    | -269                   |
| Constant   | SQLE_COLUMN_IN_TRIGGER |
| SQLState   | 53W06                  |
| ODBC State | S1000                  |

Probable cause

This error is reported if you attempt to delete a column that is referenced in a trigger definition. DROP the trigger before performing the ALTER command.

## Error 270

Message text

Cannot drop a user that owns procedures in runtime engine

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -270                      |
| Constant   | SQLE_USER_OWNS_PROCEDURES |
| SQLState   | 55W04                     |
| ODBC State | 42000                     |

Probable cause

This error is reported by the runtime engine if you attempt to drop a user that owns procedures. Because this operation would result in dropping procedures, and the runtime engine cannot drop procedures, it is not allowed. Use the full engine.

## Error 271

Message text

Trigger definition conflicts with existing triggers

| Item       | Value                      |
|------------|----------------------------|
| SQLCode    | -271                       |
| Constant   | SQLE_TRIGGER_DEFN_CONFLICT |
| SQLState   | 52W11                      |
| ODBC State | 42S01                      |

Probable cause

A trigger definition could not be created because it conflicts with an existing trigger definition. A trigger with the same name may already exist.

## Error 272

Message text

Invalid REFERENCES clause in trigger definition

| Item       | Value                         |
|------------|-------------------------------|
| SQLCode    | -272                          |
| Constant   | SQLE_INVALID_TRIGGER_COL_REFS |
| SQLState   | 52W12                         |
| ODBC State | 42000                         |

**Probable cause** The REFERENCES clause in a trigger definition is invalid. An OLD correlation name may have been specified in a BEFORE INSERT trigger, or a NEW correlation name may have been specified in an AFTER DELETE trigger. In both cases, the values do not exist and cannot be referenced.

## Error 273

**Message text** COMMIT/ROLLBACK not allowed within trigger actions

| Item       | Value                          |
|------------|--------------------------------|
| SQLCode    | -273                           |
| Constant   | SQLE_INVALID_TRIGGER_STATEMENT |
| SQLState   | 2D501                          |
| ODBC State | 42000                          |

**Probable cause** An attempt was made to execute a statement that is not allowed while performing a trigger action. COMMIT and ROLLBACK statements cannot be executed from a trigger.

## Error 274

**Message text** Procedure calls have nested too deeply

| Item       | Value                 |
|------------|-----------------------|
| SQLCode    | -274                  |
| Constant   | SQLE_NESTING_TOO_DEEP |
| SQLState   | 42W29                 |
| ODBC State | 42000                 |

**Probable cause** You have probably defined a procedure that causes unlimited recursion.

## Error 275

**Message text** Triggers and procedures not supported in runtime engine

| Item     | Value                          |
|----------|--------------------------------|
| SQLCode  | -275                           |
| Constant | SQLE_PROCEDURES_NOT_IN_DESKTOP |
| SQLState | 0AW04                          |

| Item       | Value |
|------------|-------|
| ODBC State | S1000 |

Probable cause You have attempted to call a stored procedure or have modified a row in a table on which a trigger is defined and you are using the desktop engine. Triggers and stored procedures are not supported in the runtime engine. You must be running the full engine to use these features.

## Error 280

Message text Publication '%1' not found

| Item        | Value   |
|-------------|---|
| SQLCode     | -280  |
| Constant    | SQLE_PUBLICATION_NOT_FOUND                      |
| SQLState    | 5RW01   |
| ODBC State  | 42S02   |
| Parameter 1 | name of the publication that could not be found |

Probable cause You have misspelled the name of a publication, or you have connected with a different user ID and forgotten to qualify a publication name with a user name.

## Error 281

Message text Table '%1' has publications

| Item        | Value   |
|-------------|---|
| SQLCode     | -281  |
| Constant    | SQLE_TABLE_HAS_PUBLICATIONS                   |
| SQLState    | 5RW02   |
| ODBC State  | 42S02   |
| Parameter 1 | name of the publication that has publications |

Probable cause You have attempted to drop a table that has publications defined.

## Error 282

Message text Subscription to '%1' for '%2' already exists

| Item        | Value                        |
|-------------|------------------------------|
| SQLCode     | -282                         |
| Constant    | SQLE_SUBSCRIPTION_NOT_UNIQUE |
| SQLState    | 5RW03                        |
| ODBC State  | 42S02                        |
| Parameter 1 | name of the publication      |
| Parameter 2 | name of the user             |

Probable cause                      You have tried to create a subscription that already exists.

## Error 283

Message text                      Subscription to '%1' for '%2' not found

| Item        | Value                       |
|-------------|-----------------------------|
| SQLCode     | -283                        |
| Constant    | SQLE_SUBSCRIPTION_NOT_FOUND |
| SQLState    | 5RW04                       |
| ODBC State  | 42S02                       |
| Parameter 1 | name of the publication     |
| Parameter 2 | name of the user            |

Probable cause                      You have tried to drop, start, or synchronize a subscription that does not exist.

## Error 284

Message text                      User '%1' is already the publisher for this database

| Item        | Value                   |
|-------------|-------------------------|
| SQLCode     | -284                    |
| Constant    | SQLE_ONLY_ONE_PUBLISHER |
| SQLState    | 5RW05                   |
| ODBC State  | 42S02                   |
| Parameter 1 | name of the publisher   |

Probable cause                      You have tried to GRANT PUBLISH to a user ID, when a publisher already exists.

## Error 285

Message text

User '%1' is not a remote user for this database

| Item        | Value                |
|-------------|----------------------|
| SQLCode     | -285                 |
| Constant    | SQLE_NOT_REMOTE_USER |
| SQLState    | 5RW06                |
| ODBC State  | 42S02                |
| Parameter 1 | name of user         |

Probable cause

You have tried to CREATE a subscription for a user, or PASSTHROUGH for a user that is not a remote user of this database. You must GRANT REMOTE or GRANT CONSOLIDATE.

## Error 286

Message text

Remote message type '%1' not found

| Item        | Value                       |
|-------------|-----------------------------|
| SQLCode     | -286                        |
| Constant    | SQLE_NOT_REMOTE_TYPE        |
| SQLState    | 5RW07                       |
| ODBC State  | 42S02                       |
| Parameter 1 | name of remote message type |

Probable cause

You have referred to a remote message type that is not defined in this database. CREATE REMOTE TYPE is used to define remote message types.

## Error 287

Message text

Passthrough statement inconsistent with current passthrough

| Item       | Value                         |
|------------|-------------------------------|
| SQLCode    | -287                          |
| Constant   | SQLE_PASSTHROUGH_INCONSISTENT |
| SQLState   | 5RW08                         |
| ODBC State | 42S02                         |

Probable cause Passthrough is additive, in that subsequent passthrough statements add to the list of users receiving passthrough. The passthrough statements must all be PASSTHROUGH ONLY or none should be PASSTHROUGH ONLY.

## Error 288

Message text Remote statement failed

| Item       | Value                        |
|------------|------------------------------|
| SQLCode    | -288                         |
| Constant   | SQLE_REMOTE_STATEMENT_FAILED |
| SQLState   | 5RW09                        |
| ODBC State | 42S02                        |

Probable cause This SQLSTATE can be signalled within a trigger to prevent DBREMOTE from displaying an error message in the output. This exception will only occur when a trigger or procedure SIGNALS it. This is useful for ignoring replication errors that are permitted by design.

## Error 294

Message text Format string argument number %1 is invalid

| Item        | Value                              |
|-------------|------------------------------------|
| SQLCode     | -294                               |
| Constant    | SQLE_INVALID_FORMAT_STRING_ARG_NUM |
| SQLState    | 53W08                              |
| ODBC State  | 42000                              |
| Parameter 1 | argument number                    |

Probable cause An argument number in the format string for a PRINT or RAISERROR statement is invalid. The number must be between 1 and 20 and must not exceed the number of arguments provided.

## Error 295

Message text Cannot uniquely identify rows in cursor

| Item       | Value                              |
|------------|------------------------------------|
| SQLCode    | -295                               |
| Constant   | SQLE_CANNOT_UNIQUELY_IDENTIFY_ROWS |
| SQLState   | 09W05                              |
| ODBC State | 24000                              |

Probable cause

A UNIQUE cursor has been opened on a SELECT statement for which a set of columns uniquely identifying each row cannot be generated. One of the tables may not be defined with a primary key or uniqueness constraint, or the SELECT statement may involve a UNION or GROUP BY.

## Error 296

Message text

Error number %1 for RAISERROR is less than 17000

| Item        | Value                          |
|-------------|--------------------------------|
| SQLCode     | -296                           |
| Constant    | SQLE_ERROR_NUMBER_OUT_OF_RANGE |
| SQLState    | 53W07                          |
| ODBC State  | 42000                          |
| Parameter 1 | error number                   |

Probable cause

The error number used in a RAISERROR statement is invalid. The number must be greater than or equal to 17000.

## Error 297

Message text

User-defined exception signalled

| Item       | Value                       |
|------------|-----------------------------|
| SQLCode    | -297                        |
| Constant   | SQLE_USER_DEFINED_EXCEPTION |
| SQLState   | 99999                       |
| ODBC State | S1000                       |

Probable cause

A stored procedure signalled a user-defined exception. This error state is reserved for use within stored procedures which contain exception handlers, as a way of signalling an exception which can be guaranteed to not have been caused by the database engine.

## Error 298

Message text

Attempted two active database requests

| Item       | Value               |
|------------|---------------------|
| SQLCode    | -298                |
| Constant   | SQLE_DOUBLE_REQUEST |
| SQLState   | 42W22               |
| ODBC State | S1000               |

Probable cause

In Embedded SQL, you have attempted to submit a database request while you have another request in process. This often occurs in Windows when processing the WM\_PAINT message causes a database request, and you get a second WM\_PAINT before the database request has completed.

## Error 299

Message text

Statement interrupted by user

| Item       | Value            |
|------------|------------------|
| SQLCode    | -299             |
| Constant   | SQLE_INTERRUPTED |
| SQLState   | 57014            |
| ODBC State | S1000            |

Probable cause

The user has aborted a statement during its execution. The database was able to stop the operation without doing a rollback. If the statement is INSERT or DELETE, any changes made by the statement will be cancelled. If the statement is a data definition command (for example CREATE TABLE), the command will be cancelled, but the COMMIT that was done as a side effect will not be cancelled.

## Error 300

Message text

Run time SQL error -- %1

| Item     | Value      |
|----------|------------|
| SQLCode  | -300       |
| Constant | SQLE_ERROR |
| SQLState | 40000      |

| Item        | Value                       |
|-------------|-----------------------------|
| ODBC State  | S1000                       |
| Parameter 1 | identification of the error |

Probable cause This error indicates an internal database error, and should be reported to Sybase IQ technical support.

## Error 301

Message text Internal database error %1-- transaction rolled back

| Item        | Value                       |
|-------------|-----------------------------|
| SQLCode     | -301                        |
| Constant    | SQLE_DATABASE_ERROR         |
| SQLState    | 40W01                       |
| ODBC State  | S1000                       |
| Parameter 1 | identification of the error |

Probable cause This error indicates an internal database error, and should be reported to Sybase IQ technical support. A ROLLBACK WORK command has been automatically executed.

## Error 302

Message text Terminated by user-- transaction rolled back

| Item       | Value                   |
|------------|-------------------------|
| SQLCode    | -302                    |
| Constant   | SQLE_TERMINATED_BY_USER |
| SQLState   | 40W02                   |
| ODBC State | S1000                   |

Probable cause The user has aborted a command while the database was executing. A ROLLBACK WORK command has been automatically executed. This will happen when the engine is running in bulk mode and the user aborts an INSERT or DELETE operation.

**Error 304**

Message text

Disk full '%1'-- transaction rolled back

| Item       | Value            |
|------------|------------------|
| SQLCode    | -304             |
| Constant   | SQLE_DEVICE_FULL |
| SQLState   | 40W03            |
| ODBC State | S1000            |

Probable cause

Your hard disk is out of free space. A ROLLBACK WORK command has been automatically executed.

**Error 305**

Message text

I/O error %1-- transaction rolled back

| Item       | Value             |
|------------|-------------------|
| SQLCode    | -305              |
| Constant   | SQLE_DEVICE_ERROR |
| SQLState   | 40W04             |
| ODBC State | S1000             |

Probable cause

Sybase IQ has detected a problem with your hard disk. If you cannot find a hardware error using the operating system disk check utility (e.g. in DOS, chkdsk, and in UNIX, fsck), report the problem to Sybase IQ technical support. A ROLLBACK WORK command has been automatically executed.

**Error 306**

Message text

Deadlock detected

| Item       | Value         |
|------------|---------------|
| SQLCode    | -306          |
| Constant   | SQLE_DEADLOCK |
| SQLState   | 40001         |
| ODBC State | 40001         |

**Probable cause** You have attempted to read or write a row and it is locked by another user. Also, the other user is blocked directly or indirectly on your own transaction. This is a deadlock situation and your transaction has been chosen as the one to rollback.

## Error 307

**Message text** All threads are blocked

| Item       | Value                |
|------------|----------------------|
| SQLCode    | -307                 |
| Constant   | SQLE_THREAD_DEADLOCK |
| SQLState   | 40W06                |
| ODBC State | 40001                |

**Probable cause** You have attempted to read or write a row and it is locked by another user. Also, all other threads (see database option `THREAD_COUNT`) are blocked waiting for a lock to be released. This is a deadlock situation and your transaction has been chosen as the one to rollback.

## Error 308

**Message text** Connection was terminated

| Item       | Value                      |
|------------|----------------------------|
| SQLCode    | -308                       |
| Constant   | SQLE_CONNECTION_TERMINATED |
| SQLState   | 40W07                      |
| ODBC State | S1000                      |

**Probable cause** Your database connection has been terminated by a DBA executing a `DROP CONNECTION` command. Your transaction was rolled back.

## Error 312

**Message text** User '%1' already has membership in group '%2'

| Item    | Value |
|---------|-------|
| SQLCode | -312  |

| Item        | Value  |
|-------------|--|
| Constant    | SQLE_ALREADY_HAS_GROUP_MEMBERSHIP            |
| SQLState    | 42W34  |
| ODBC State  | 42000  |
| Parameter 1 | name of the user that already has membership |
| Parameter 2 | name of the group                            |

Probable cause The SQL GRANT command is attempting to give a membership in a group to user that already has such membership.

## Error 313

Message text

The loginid '%1' has not been mapped to any database userid

| Item       | Value                          |
|------------|--------------------------------|
| SQLCode    | -313                           |
| Constant   | SQLE_INTEGRATED_LOGON_UNMAPPED |
| SQLState   | 28W09                          |
| ODBC State | 28000                          |

Probable cause The DBA attempted to drop a login ID that had not been mapped yet

## Warning 400

Message text

The supplied buffer was too small to hold all requested query results

| Item       | Value                        |
|------------|------------------------------|
| SQLCode    | 400                          |
| Constant   | SQLE_HLI_MORE_DATA_AVAILABLE |
| SQLState   | 01WH1                        |
| ODBC State | (handled by ODBC driver)     |

Probable cause You attempted to get a query result set using the WSQL HLI function `wsqquerytomem`. The buffer supplied by the calling application was too small to contain the entire query. The buffer will contain as many rows of the result set as possible, and the cursor will be positioned on the next row of the result set.

## Error 400

Message text

Invalid HLI command syntax

| Item       | Value               |
|------------|---------------------|
| SQLCode    | -400                |
| Constant   | SQLE_HLI_BAD_SYNTAX |
| SQLState   | 42W11               |
| ODBC State | 42W11               |

Probable cause

The command string that you sent to wsqlexec cannot be understood. Make sure that all of the keywords in the command string are spelled properly, and that variable names (such as host variable, cursor or statement names) are not too long.

## Error 401

Message text

Invalid HLI cursor name

| Item       | Value               |
|------------|---------------------|
| SQLCode    | -401                |
| Constant   | SQLE_HLI_BAD_CURSOR |
| SQLState   | 34W01               |
| ODBC State | 34W01               |

Probable cause

The cursor name indicated in your command is not a valid one. For instance, this error would occur if you tried to close a cursor that had never even been declared.

## Error 402

Message text

Invalid HLI statement name

| Item       | Value                  |
|------------|------------------------|
| SQLCode    | -402                   |
| Constant   | SQLE_HLI_BAD_STATEMENT |
| SQLState   | 26W01                  |
| ODBC State | 26W01                  |

Probable cause                      The statement name indicated in your command is not a valid one. This typically indicates that you have failed to prepare the statement.

## Error 403

Message text                          Invalid HLI host variable name

| Item       | Value                      |
|------------|----------------------------|
| SQLCode    | -403                       |
| Constant   | SQLE_HLI_BAD_HOST_VAR_NAME |
| SQLState   | 42W09                      |
| ODBC State | 42W09                      |

Probable cause                      You have used a host variable, and the host variable callback function does not recognize it.

## Error 404

Message text                          Invalid HLI host variable value

| Item       | Value                       |
|------------|-----------------------------|
| SQLCode    | -404                        |
| Constant   | SQLE_HLI_BAD_HOST_VAR_VALUE |
| SQLState   | 42W10                       |
| ODBC State | 42W10                       |

Probable cause                      You have used a host variable, and the host variable value is too long.

## Error 405

Message text                          Invalid HLI callback function

| Item       | Value                 |
|------------|-----------------------|
| SQLCode    | -405                  |
| Constant   | SQLE_HLI_BAD_CALLBACK |
| SQLState   | 42W12                 |
| ODBC State | 42W12                 |

Probable cause                      WSQL HLI needed to use a callback function, but the function has not been registered using the wsqlregisterfuncs entry point.

## Error 406

Message text                        HLI internal error

| Item       | Value             |
|------------|-------------------|
| SQLCode    | -406              |
| Constant   | SQLE_HLI_INTERNAL |
| SQLState   | WI007             |
| ODBC State | WI007             |

Probable cause                      This is a Sybase IQ internal error and should be reported to Sybase.

## Error 407

Message text                        An argument passed to an HLI function was invalid

| Item       | Value                 |
|------------|-----------------------|
| SQLCode    | -407                  |
| Constant   | SQLE_HLI_BAD_ARGUMENT |
| SQLState   | 22W01                 |
| ODBC State | 22W01                 |

Probable cause                      One of the arguments passed to a WSQL HLI function was invalid. This may indicate that a pointer to a command string or result buffer is the null pointer.

## Error 608

Message text                        Invalid TEXTPTR value used with WRITETEXT or READTEXT

| Item       | Value                      |
|------------|----------------------------|
| SQLCode    | -608                       |
| Constant   | SQLE_INVALID_TEXTPTR_VALUE |
| SQLState   | 22W03                      |
| ODBC State | S1000                      |

Probable cause The value supplied as the TEXTPTR for a WRITETEXT or READTEXT statement is invalid.

## Error 609

Message text Invalid datatype for column in WRITETEXT or READTEXT

| Item       | Value                            |
|------------|----------------------------------|
| SQLCode    | -609                             |
| Constant   | SQLE_INVALID_TEXT_IMAGE_DATATYPE |
| SQLState   | 53W09                            |
| ODBC State | S1000                            |

Probable cause The column referenced in a WRITETEXT or READTEXT statement is not defined for storing text or image data.

## Error 610

Message text User message %1 already exists

| Item       | Value                       |
|------------|-----------------------------|
| SQLCode    | -610                        |
| Constant   | SQLE_MESSAGE_ALREADY_EXISTS |
| SQLState   | 52W16                       |
| ODBC State | 23000                       |

Probable cause The message with this error number already exists in SYSUSERMESSAGES.

## Error 611

Message text Transact-SQL feature not supported

| Item       | Value                           |
|------------|---------------------------------|
| SQLCode    | -611                            |
| Constant   | SQLE_TSQL_FEATURE_NOT_SUPPORTED |
| SQLState   | 0AW02                           |
| ODBC State | 42000                           |

Probable cause An attempt was made to use a feature of Transact-SQL that is not supported.

## Error 612

Message text

User message %1 not found

| Item        | Value                  |
|-------------|------------------------|
| SQLCode     | -612                   |
| Constant    | SQLE_MESSAGE_NOT_FOUND |
| SQLState    | 52W17                  |
| ODBC State  | 42S02                  |
| Parameter 1 | message number         |

Probable cause

The message with this error number does not exist in SYSUSERMESSAGES.

## Error 613

Message text

User-defined type %1 not found

| Item        | Value                         |
|-------------|-------------------------------|
| SQLCode     | -613                          |
| Constant    | SQLE_USER_TYPE_NOT_FOUND      |
| SQLState    | 52W18                         |
| ODBC State  | 42S02                         |
| Parameter 1 | name of the user-defined type |

Probable cause

The user-defined type with this name does not exist in SYSUSERTYPE.

## Error 614

Message text

Cannot drop a user that owns messages or datatypes

| Item       | Value                                |
|------------|--------------------------------------|
| SQLCode    | -614                                 |
| Constant   | SQLE_USER_OWNS_MESSAGES_OR_DATATYPES |
| SQLState   | 55W05                                |
| ODBC State | 42000                                |

Probable cause

A user to be dropped is the creator of a message or user-defined datatype. The message or user-defined datatype must be dropped first.

**Error 615**

Message text

Parameter '%1' not found in procedure '%2'

| Item       | Value                       |
|------------|-----------------------------|
| SQLCode    | -615                        |
| Constant   | SQLE_INVALID_PARAMETER_NAME |
| SQLState   | 42W47                       |
| ODBC State | 42000                       |

Probable cause

The procedure parameter name does not match a parameter for this procedure. Check the spelling of the parameter name.

**Error 616**

Message text

Too many columns in table

| Item       | Value                          |
|------------|--------------------------------|
| SQLCode    | -616                           |
| Constant   | SQLE_TOO_MANY_COLUMNS_IN_TABLE |
| SQLState   | 52W20                          |
| ODBC State | S1000                          |

Probable cause

A CREATE TABLE or ALTER TABLE statement attempted to add a column to a table, but the resulting number of columns in the table would exceed the limit for the current database page size.

**Error 617**

Message text

Calling functions outside the database engine is not supported

| Item       | Value                             |
|------------|-----------------------------------|
| SQLCode    | -617                              |
| Constant   | SQLE_EXTERNAL_CALLS_NOT_SUPPORTED |
| SQLState   | WW003                             |
| ODBC State | S1000                             |

Probable cause

An attempt was made to call a stored procedure that, in turn, calls a function in a dynamically loaded module. The operating system on which this stored procedure was called does not support such an action.

## Error 618

Message text

Mismatch between external function platform specifier and current operating system

| Item       | Value                          |
|------------|--------------------------------|
| SQLCode    | -618                           |
| Constant   | SQLE_EXTERNAL_PLATFORM_FAILURE |
| SQLState   | WW004                          |
| ODBC State | S1000                          |

Probable cause

A call to an external entry point in a dynamically loaded module was qualified by an operating system which was not the operating system on which the engine/server is currently executing.

## Error 619

Message text

Need a dynamic library name

| Item       | Value                 |
|------------|-----------------------|
| SQLCode    | -619                  |
| Constant   | SQLE_REQUIRE_DLL_NAME |
| SQLState   | WW005                 |
| ODBC State | S1000                 |

Probable cause

The name of the external function to call did not contain a library name specifier.

## Error 620

Message text

Could not load dynamic library '%1'

| Item        | Value   |
|-------------|---|
| SQLCode     | -620  |
| Constant    | SQLE_COULD_NOT_LOAD_LIBRARY                           |
| SQLState    | WW006   |
| ODBC State  | S1000   |
| Parameter 1 | name of the dynamic library which could not be loaded |

**Probable cause** This error is usually caused by a failure to load a dynamic library named in an external function call. This error can also occur if other libraries such as the Java virtual machine library are missing.

## Error 621

**Message text** Could not find '%1' in dynamic library '%2'

| Item        | Value  |
|-------------|--|
| SQLCode     | -621   |
| Constant    | SQLE_COULD_NOT_FIND_FUNCTION   |
| SQLState    | WW007  |
| ODBC State  | S1000  |
| Parameter 1 | name of the function which could not be found                        |
| Parameter 2 | name of the dynamic library in which the function could not be found |

**Probable cause** The external function could not be found in the dynamic library.

## Error 622

**Message text** Could not allocate resources to call external function

| Item       | Value                       |
|------------|-----------------------------|
| SQLCode    | -622                        |
| Constant   | SQLE_ERROR_CALLING_FUNCTION |
| SQLState   | WW008                       |
| ODBC State | S1000                       |

**Probable cause** The external function could not be called due to a shortage of operating system resources. If the operating system supports threads, the maximum thread count should be increased.

## Error 623

**Message text** Data definition statements not allowed in procedures

| Item    | Value |
|---------|-------|
| SQLCode | -623  |

| Item       | Value                              |
|------------|------------------------------------|
| Constant   | SQLE_DDL_NOT_ALLOWED_IN_PROCEDURES |
| SQLState   | 52W21                              |
| ODBC State | S1000                              |

Probable cause

The procedure definition contains a data definition statement (such as CREATE, DROP, GRANT, REVOKE, ALTER). These statements are not allowed within procedures.

## Error 624

Message text

Expression has unsupported datatype

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -624                      |
| Constant   | SQLE_DATATYPE_NOT_ALLOWED |
| SQLState   | WW009                     |
| ODBC State | S1000                     |

Probable cause

Either an external function or Java method is declared to have a parameter or result datatype which is not supported, or a Java field reference with unsupported result type was attempted.

## Error 625

Message text

Too many parameters to this external procedure call

| Item       | Value                    |
|------------|--------------------------|
| SQLCode    | -625                     |
| Constant   | SQLE_TOO_MANY_PARAMETERS |
| SQLState   | WW010                    |
| ODBC State | S1000                    |

Probable cause

This is a Windows 32-bit specific error. There is a maximum of 256 parameters to an external function call.

**Error 626**

Message text

A thread used internally could not be started

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -626                      |
| Constant   | SQLE_THREAD_START_FAILURE |
| SQLState   | WW011                     |
| ODBC State | S1000                     |

Probable cause

This is a Windows 95 specific error. An operating system thread could not be started that is required to execute external functions.

**Error 627**

Message text

Disallowed language extension detected in syntax near '%1'

| Item        | Value   |
|-------------|---|
| SQLCode     | -627  |
| Constant    | SQLE_INVALID_SYNTAX_EXTENSION                         |
| SQLState    | 0AW03   |
| ODBC State  | S1000   |
| Parameter 1 | the word or symbol where the syntax has been detected |

Probable cause

The command you are trying to execute contains extensions to ANSI 1992 Entry SQL that are not allowed by the current settings.

**Error 628**

Message text

Division by zero

| Item       | Value               |
|------------|---------------------|
| SQLCode    | -628                |
| Constant   | SQLE_DIV_ZERO_ERROR |
| SQLState   | 22012               |
| ODBC State | 22012               |

Probable cause

A division by zero operation was detected.

## Error 629

Message text Invalid escape character '% 1'

| Item       | Value                    |
|------------|--------------------------|
| SQLCode    | -629                     |
| Constant   | SQLE_INVALID_ESCAPE_CHAR |
| SQLState   | 22019                    |
| ODBC State | 22019                    |

Probable cause Escape character string length must be exactly one.

## Error 630

Message text Invalid escape sequence '% 1'

| Item       | Value                   |
|------------|-------------------------|
| SQLCode    | -630                    |
| Constant   | SQLE_INVALID_ESCAPE_SEQ |
| SQLState   | 22025                   |
| ODBC State | 22025                   |

Probable cause LIKE pattern contains an invalid use of the escape character. The escape character may only precede the special characters '%', '\_', '[', and the escape character itself.

## Error 631

Message text RAISERROR executed: % 1

| Item        | Value                    |
|-------------|--------------------------|
| SQLCode     | -631                     |
| Constant    | SQLE_RAISERROR_STMT      |
| SQLState    | WW012                    |
| ODBC State  | S1000                    |
| Parameter 1 | RAISERROR message string |

Probable cause A RAISERROR statement has been executed.

**Error 632**

Message text

WITH CHECK OPTION violated for view '%1'

| Item        | Value                            |
|-------------|----------------------------------|
| SQLCode     | -632                             |
| Constant    | SQLE_WITH_CHECK_OPTION_VIOLATION |
| SQLState    | 44000                            |
| ODBC State  | 44000                            |
| Parameter 1 | view where check option violated |

Probable cause

A value in the row(s) being inserted or modified fell outside the range of the view

**Error 633**

Message text

Update operation attempted on a read-only cursor

| Item       | Value                 |
|------------|-----------------------|
| SQLCode    | -633                  |
| Constant   | SQLE_READ_ONLY_CURSOR |
| SQLState   | 42W30                 |
| ODBC State | 42000                 |

Probable cause

An update operation has been attempted on a cursor that was explicitly declared as read-only.

**Error 634**

Message text

Unterminated C string

| Item       | Value                   |
|------------|-------------------------|
| SQLCode    | -634                    |
| Constant   | SQLE_UNTERMINATED_C_STR |
| SQLState   | 22024                   |
| ODBC State | 22024                   |

Probable cause

The least significant character of a C string host variable must contain the null character.

## Error 635

Message text

GRANT of column permission on view not allowed

| Item       | Value                          |
|------------|--------------------------------|
| SQLCode    | -635                           |
| Constant   | SQLE_NO_COLUMN_PERMS_FOR_VIEWS |
| SQLState   | 52W22                          |
| ODBC State | S1000                          |

Probable cause

Permissions on columns cannot be granted for views.

## Error 636

Message text

Duplicate referencing column

| Item       | Value                             |
|------------|-----------------------------------|
| SQLCode    | -636                              |
| Constant   | SQLE_DUPLICATE_REFERENCING_COLUMN |
| SQLState   | 42W40                             |
| ODBC State | 42000                             |

Probable cause

A duplicate column name was used in the list of referencing columns.

## Error 637

Message text

Duplicate insert column

| Item       | Value                        |
|------------|------------------------------|
| SQLCode    | -637                         |
| Constant   | SQLE_DUPLICATE_INSERT_COLUMN |
| SQLState   | 42W41                        |
| ODBC State | 42000                        |

Probable cause

A duplicate column name was used in the list of insert columns.

## Error 638

Message text

Right truncation of string data

| Item       | Value                        |
|------------|------------------------------|
| SQLCode    | -638                         |
| Constant   | SQLE_STRING_RIGHT_TRUNCATION |
| SQLState   | 22001                        |
| ODBC State | 22001                        |

Probable cause Non-space characters were truncated upon the assignment of string data.

## Error 639

Message text Parameter name missing in call to procedure '%1'

| Item        | Value                       |
|-------------|-----------------------------|
| SQLCode     | -639                        |
| Constant    | SQLE_PARAMETER_NAME_MISSING |
| SQLState    | 42W42                       |
| ODBC State  | 42000                       |
| Parameter 1 | the name of the procedure   |

Probable cause Positional arguments were specified after keyword arguments in a call to this procedure.

## Error 640

Message text Invalid descriptor index

| Item       | Value                         |
|------------|-------------------------------|
| SQLCode    | -640                          |
| Constant   | SQLE_INVALID_DESCRIPTOR_INDEX |
| SQLState   | 07009                         |
| ODBC State | 07009                         |

Probable cause The index number used with respect to a descriptor area is out of range.

## Error 641

Message text Error in assignment

| Item       | Value                    |
|------------|--------------------------|
| SQLCode    | -641                     |
| Constant   | SQLE_ERROR_IN_ASSIGNMENT |
| SQLState   | 22005                    |
| ODBC State | 22018                    |

Probable cause

In a GET DESCRIPTOR statement, the data type of the host variable must correspond to the data type of the descriptor item.

## Error 642

Message text

Invalid SQL descriptor name

| Item       | Value                        |
|------------|------------------------------|
| SQLCode    | -642                         |
| Constant   | SQLE_INVALID_DESCRIPTOR_NAME |
| SQLState   | 33000                        |
| ODBC State | 33000                        |

Probable cause

You have attempted to deallocate a descriptor which has not been allocated.

## Error 644

Message text

Invalid database page size

| Item       | Value                  |
|------------|------------------------|
| SQLCode    | -644                   |
| Constant   | SQLE_PAGE_SIZE_INVALID |
| SQLState   | 08W32                  |
| ODBC State | 08004                  |

Probable cause

You have attempted to create a database with an invalid page size.

## Error 645

Message text

Database creation failed

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -645                      |
| Constant   | SQLE_DATABASE_NOT_CREATED |
| SQLState   | 08W33                     |
| ODBC State | 08004                     |

Probable cause                      An attempt to initialize a file for database or write file creation failed.

## Error 646

Message text                        Could not load the store DLL %1

| Item       | Value                 |
|------------|-----------------------|
| SQLCode    | -646                  |
| Constant   | SQLE_STORE_NOT_LOADED |
| SQLState   | 08W34                 |
| ODBC State | S1000                 |

Probable cause                      An attempt to load the store DLL failed.

## Error 647

Message text                        Could not execute store DLL (%1) entry point.

| Item       | Value                      |
|------------|----------------------------|
| SQLCode    | -647                       |
| Constant   | SQLE_STORE_ENTRY_NOT_FOUND |
| SQLState   | 08W35                      |
| ODBC State | S1000                      |

Probable cause                      An attempt to locate or execute the store DLL entry point failed.

## Error 648

Message text                        Cannot create item (%1) in the specified dbspace.

| Item    | Value |
|---------|-------|
| SQLCode | -648  |

| Item       | Value                           |
|------------|---------------------------------|
| Constant   | SQLE_INVALID_DBSPACE_FOR_CREATE |
| SQLState   | 08W36                           |
| ODBC State | S1000                           |

Probable cause The dbspace specified is invalid, e.g., an index must be created in a dbspace of the same type as the underlying table.

## Error 649

Message text Field '%1' of class '%2' cannot be null

| Item        | Value                                      |
|-------------|--|
| SQLCode     | -649                                       |
| Constant    | SQLE_FIELD_CANNOT_BE_NULL                  |
| SQLState    | WW015                                      |
| ODBC State  | S1000                                      |
| Parameter 1 | the name of the field which cannot be null |
| Parameter 2 | the name of the class which has the field  |

Probable cause An attempt was made to store a SQL null value in a Java object field which has a Java type that cannot be null. For example, the Java 'int' type cannot be null.

## Error 650

Message text Index type specification of '%1' is invalid.

| Item       | Value                   |
|------------|-------------------------|
| SQLCode    | -650                    |
| Constant   | SQLE_INVALID_INDEX_TYPE |
| SQLState   | WW016                   |
| ODBC State | S1000                   |

Probable cause IQ index types can be specified for IQ indexes only.

## Error 651

Message text An attempt to delete database '%1' failed.

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -651                      |
| Constant   | SQLE_DROP_DATABASE_FAILED |
| SQLState   | WW017                     |
| ODBC State | S1000                     |

Probable cause                      Some parts of the database may have been deleted before failure.

## Error 652

Message text                      Could not decompress class '%1' from Jar.

| Item        | Value                                 |
|-------------|---------------------------------------|
| SQLCode     | -652                                  |
| Constant    | SQLE_CANNOT_DECOMPRESS_CLASS          |
| SQLState    | WP003                                 |
| ODBC State  | S1000                                 |
| Parameter 1 | the name of the class file in the Jar |

Probable cause                      The Java runtime library must be installed to extract class files from .ZIP files or .JAR files.

## Error 653

Message text                      Cannot remove class '%1': member of Jar

| Item        | Value  |
|-------------|--|
| SQLCode     | -653   |
| Constant    | SQLE_CLASS_MEMBER_OF_JAR                         |
| SQLState    | WP004  |
| ODBC State  | S1000  |
| Parameter 1 | the name of the class file that can't be removed |

Probable cause                      An attempt was made to remove a class file which is still part of a Jar. (It must be removed with the Jar.)

## Error 654

Message text

The connection parameters file could not be found.

| Item       | Value                |
|------------|----------------------|
| SQLCode    | -654                 |
| Constant   | SQLE_NO_PROFILE_FILE |
| SQLState   | 08W37                |
| ODBC State | 08001                |

Probable cause

An attempt was made to parse a connection string containing a profile but the connection parameters file could not be found.

## Error 655

Message text

There was an error parsing the connection parameter string. Please check the string or the connection parameter file.

| Item       | Value                |
|------------|----------------------|
| SQLCode    | -655                 |
| Constant   | SQLE_GEN_PARSE_ERROR |
| SQLState   | 08W38                |
| ODBC State | 08001                |

Probable cause

The connection string could not be parsed. The string or connection parameter file contains a syntax error.

## Error 656

Message text

Unable to connect to server '%1': %2

| Item        | Value  |
|-------------|--|
| SQLCode     | -656   |
| Constant    | SQLE_OMNI_CONNECT_ERROR                                      |
| SQLState    | WO001  |
| ODBC State  | S1000  |
| Parameter 1 | the name of the server that could not be connected to        |
| Parameter 2 | a more specific reason returned from the server class driver |

Probable cause                   An attempt was made to connect to a remote server. Check that the remote server is running.

## Error 658

Message text                   Remote server %1 is currently configured as read only.

| Item        | Value                         |
|-------------|-------------------------------|
| SQLCode     | -658                          |
| Constant    | SQLE_OMNI_READONLY            |
| SQLState    | WO003                         |
| ODBC State  | S1000                         |
| Parameter 1 | the name of the remote server |

Probable cause                   An attempt was made to perform an update on an object located on a server that is configured as read only. Use ALTER SERVER to reconfigure the remote server to be updatable.

## Error 659

Message text                   Remote server %1 could not be found. Add the server using CREATE SERVER.

| Item        | Value                         |
|-------------|-------------------------------|
| SQLCode     | -659                          |
| Constant    | SQLE_OMNI_SERVER_NOT_FOUND    |
| SQLState    | WO004                         |
| ODBC State  | S1000                         |
| Parameter 1 | the name of the remote server |

Probable cause                   An attempt was made to define an object on a server that has not been added. Use CREATE SERVER to add the remote server definition.

## Error 660

Message text                   Server %1: %2

| Item    | Value |
|---------|-------|
| SQLCode | -660  |

| Item        | Value                              |
|-------------|------------------------------------|
| Constant    | SQLE_OMNI_REMOTE_ERROR             |
| SQLState    | WO005                              |
| ODBC State  | S1000                              |
| Parameter 1 | the name of the remote server      |
| Parameter 2 | the message from the remote server |

Probable cause A message was generated by a remote server. The message text is included.

## Error 661

Message text Backwards scrolling cursors are not supported for remote objects.

| Item       | Value                      |
|------------|----------------------------|
| SQLCode    | -661                       |
| Constant   | SQLE_OMNI_BACKWARDS_CURSOR |
| SQLState   | WO006                      |
| ODBC State | S1000                      |

Probable cause Backwards scrolling cursors are not supported for remote objects. Change the client program to use forward scrolling cursors only.

## Error 662

Message text Cannot serialize java object with class %1

| Item        | Value  |
|-------------|--|
| SQLCode     | -662   |
| Constant    | SQLE_JAVA_SERIALIZATION_ERROR                    |
| SQLState    | WI009  |
| ODBC State  | S1000  |
| Parameter 1 | the class of the value that cannot be serialized |

Probable cause The Java object cannot be persisted into a database column.

## Error 663

Message text Cannot deserialize java object with class %1

| Item       | Value                           |
|------------|---------------------------------|
| SQLCode    | -663                            |
| Constant   | SQLE_JAVA_DESERIALIZATION_ERROR |
| SQLState   | WW018                           |
| ODBC State | S1000                           |

Probable cause The persisted Java object cannot be read from the database column. Possibly, the class of the object has been removed or modified.

## Error 664

Message text Database is active

| Item       | Value                |
|------------|----------------------|
| SQLCode    | -664                 |
| Constant   | SQLE_DATABASE_ACTIVE |
| SQLState   | 08W40                |
| ODBC State | S1000                |

Probable cause An attempt was made to create a writefile for a database that is currently active.

## Error 665

Message text Database %1 needs recovery

| Item        | Value   |
|-------------|---|
| SQLCode     | -665  |
| Constant    | SQLE_DATABASE_NEEDS_RECOVERY                  |
| SQLState    | 08W41   |
| ODBC State  | S1000   |
| Parameter 1 | file name of the database that needs recovery |

Probable cause The database quit abnormally the last time it was used. Database recovery must be performed before proceeding.

## Error 666

Message text

The table '%1' could not be found.

| Item        | Value                                 |
|-------------|---------------------------------------|
| SQLCode     | -666                                  |
| Constant    | SQLE_OMNI_RMT_TABLE_NOTFOUND          |
| SQLState    | WO007                                 |
| ODBC State  | S1000                                 |
| Parameter 1 | the complete name of the remote table |

Probable cause

The table could not be found on the remote server. Check the remote table name and the user privileges on that table.

## Error 667

Message text

Could not access column information for the table '%1'.

| Item        | Value                                 |
|-------------|---------------------------------------|
| SQLCode     | -667                                  |
| Constant    | SQLE_OMNI_RMT_COLUMNS_NOTFOUND        |
| SQLState    | WO008                                 |
| ODBC State  | S1000                                 |
| Parameter 1 | the complete name of the remote table |

Probable cause

Column information for the table could not be accessed. Check privileges for the table.

## Error 668

Message text

Cursor is restricted to FETCH NEXT operations

| Item       | Value                 |
|------------|-----------------------|
| SQLCode    | -668                  |
| Constant   | SQLE_NO_SCROLL_CURSOR |
| SQLState   | 09W06                 |
| ODBC State | HY106                 |

**Probable cause** An illegal FETCH operation has been detected for a NO SCROLL cursor. For a forward-only cursor the only permitted FETCH operations are FETCH RELATIVE 0 and FETCH NEXT (FETCH RELATIVE 1).

## Error 669

**Message text** Method '%1' cannot be called at this time

| Item        | Value                        |
|-------------|------------------------------|
| SQLCode     | -669                         |
| Constant    | SQLE_METHOD_CANNOT_BE_CALLED |
| SQLState    | WJ001                        |
| ODBC State  | S1000                        |
| Parameter 1 | the name of the method       |

**Probable cause** The method cannot be called at this time. Check that the method is not being called out of order.

## Error 670

**Message text** Invalid class byte code

| Item       | Value                    |
|------------|--------------------------|
| SQLCode    | -670                     |
| Constant   | SQLE_BAD_CLASS_BYTE_CODE |
| SQLState   | WP005                    |
| ODBC State | S1000                    |

**Probable cause** A binary expression passed to the INSTALL JAVA command was not a valid Java class.

## Error 671

**Message text** Parameter not registered as output parameter

| Item     | Value                     |
|----------|---------------------------|
| SQLCode  | -671                      |
| Constant | SQLE_PARAM_NOT_REGISTERED |

| Item       | Value |
|------------|-------|
| SQLState   | WJ002 |
| ODBC State | S1000 |

Probable cause The parameter must be registered as an output parameter before the value of the parameter can be obtained.

## Error 672

Message text Database upgrade failed

| Item       | Value                        |
|------------|------------------------------|
| SQLCode    | -672                         |
| Constant   | SQLE_DATABASE_UPGRADE_FAILED |
| SQLState   | 08W42                        |
| ODBC State | 08004                        |

Probable cause An attempt to upgrade a database failed. This could be caused by a failure to read or write one of the SQL script files used to define the system table changes.

## Error 673

Message text Database upgrade not possible

| Item       | Value                              |
|------------|------------------------------------|
| SQLCode    | -673                               |
| Constant   | SQLE_DATABASE_UPGRADE_NOT_POSSIBLE |
| SQLState   | 08W43                              |
| ODBC State | 08004                              |

Probable cause An attempt to upgrade a database failed. The database is too old to be upgraded.

## Error 674

Message text Statement's size limit is invalid

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -674                      |
| Constant   | SQLE_INVALID_CURSOR_RANGE |
| SQLState   | 09W07                     |
| ODBC State | 42000                     |

Probable cause FIRST or TOP n are used in a SELECT statement to limit the size of a result. The size limit 'n' must be a constant integer greater than 0 and less than 32767.

## Error 675

Message text Java virtual machine could not be started

| Item       | Value                    |
|------------|--------------------------|
| SQLCode    | -675                     |
| Constant   | SQLE_JAVA_VM_NOT_STARTED |
| SQLState   | WP006                    |
| ODBC State | S1000                    |

Probable cause A problem was encountered starting the Java virtual machine. Possible problems include not enough memory, or incomplete installation of the Java runtime support classes.

## Error 676

Message text The specified transaction isolation is invalid

| Item       | Value                              |
|------------|------------------------------------|
| SQLCode    | -676                               |
| Constant   | SQLE_INVALID_TRANSACTION_ISOLATION |
| SQLState   | WJ003                              |
| ODBC State | S1000                              |

Probable cause The specified transaction isolation is invalid.

## Error 677

Message text Table '%1' has a foreign key with a referential action

| Item        | Value   |
|-------------|---|
| SQLCode     | -677  |
| Constant    | SQLE_TABLE_HAS_REFACTION                      |
| SQLState    | 56001   |
| ODBC State  | S1000   |
| Parameter 1 | name of the table with the referential action |

Probable cause

The action could not be performed on the table since the table has a foreign key with a referential action.

## Error 678

Message text

Index name '%1' is ambiguous

| Item        | Value                       |
|-------------|-----------------------------|
| SQLCode     | -678                        |
| Constant    | SQLE_AMBIGUOUS_INDEX_NAME   |
| SQLState    | 52W40                       |
| ODBC State  | 42S11                       |
| Parameter 1 | name of the ambiguous index |

Probable cause

A statement has referred to an index name which is not unique. The index name should be prefixed by an owner name.

## Error 679

Message text

Not enough memory is allocated to the java virtual machine for remote access.

| Item       | Value                   |
|------------|-------------------------|
| SQLCode    | -679                    |
| Constant   | SQLE_OMNI_MEMORY_CONFIG |
| SQLState   | WO009                   |
| ODBC State | S1000                   |

Probable cause

The Java heap size and Java name space configuration values in sysoptions must be increased to allow the loading of the Java classes used for remote access.

**Error 680**

Message text

Invalid expression in WHERE clause of Transact-SQL outer join

| Item       | Value                           |
|------------|---------------------------------|
| SQLCode    | -680                            |
| Constant   | SQLE_INVALID_TSQL_OJ_EXPRESSION |
| SQLState   | 52W23                           |
| ODBC State | 42000                           |

Probable cause

An expression in the WHERE clause of a query which uses Transact-SQL syntax contains a comparison of a column from the null-supplying table with a subquery or an expression which references a column from another table.

**Error 681**

Message text

Invalid join type used with Transact-SQL outer join

| Item       | Value                       |
|------------|-----------------------------|
| SQLCode    | -681                        |
| Constant   | SQLE_INVALID_TSQL_JOIN_TYPE |
| SQLState   | 52W24                       |
| ODBC State | 42000                       |

Probable cause

An invalid join type was used with a query that contains Transact-SQL outer join comparison operators.

**Error 682**

Message text

%1

| Item        | Value                             |
|-------------|-----------------------------------|
| SQLCode     | -682                              |
| Constant    | SQLE_OMNI_DEBUG                   |
| SQLState    | WO010                             |
| ODBC State  | S1000                             |
| Parameter 1 | the debug message for the console |

Probable cause

This message is used for displaying component integration services debug messages on the console.

## Error 683

Message text The cursor name '%1' already exists

| Item        | Value                      |
|-------------|----------------------------|
| SQLCode     | -683                       |
| Constant    | SQLE_DUPLICATE_CURSOR_NAME |
| SQLState    | WJ004                      |
| ODBC State  | S1000                      |
| Parameter 1 | the name of the cursor     |

Probable cause Cursor names must be unique within a connection.

## Error 684

Message text Rollback occurred due to deadlock during prefetch

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -684                      |
| Constant   | SQLE_ROLLBACK_ON_PREFETCH |
| SQLState   | WW019                     |
| ODBC State | S1000                     |

Probable cause One of the cursors that was opened with prefetch enabled was performing fetch operations, and a deadlock occurred during a prefetch. Because of the deadlock, a rollback had to be done.

## Error 686

Message text Cannot make a static reference to nonstatic variable '%1' in class '%2'

| Item        | Value                              |
|-------------|------------------------------------|
| SQLCode     | -686                               |
| Constant    | SQLE_STATIC_REF_TO_NONSTATIC_VAR   |
| SQLState    | WW020                              |
| ODBC State  |                                    |
| Parameter 1 | the name of the nonstatic variable |
| Parameter 2 | the name of the class              |

Probable cause A static reference was attempted on nonstatic variable of a class.

**Error 687**

Message text

Syntax error, cannot specify IQ specific options without specifying IQ PATH

| Item        | Value   |
|-------------|---|
| SQLCode     | -687  |
| Constant    | SQLE_IQ_PATH_SYNTAX_ERROR                                   |
| SQLState    | 42W48   |
| ODBC State  | 42000   |
| Parameter 1 | the word or symbol where the syntax error has been detected |

Probable cause

IQ PATH must be specified in order to create an IQ database, and to specify any of these IQ-specific parameters: IQ SIZE, IQ PAGE SIZE, BLOCK SIZE, MESSAGE PATH, TEMPORARY PATH, TEMPORARY SIZE.

**Error 688**

Message text

Unsupported character set `%'`

| Item        | Value   |
|-------------|---|
| SQLCode     | -688  |
| Constant    | SQLE_UNSUPPORTED_CHARACTER_SET                        |
| SQLState    | WW021   |
| ODBC State  | S1000   |
| Parameter 1 | name of the character set that could not be supported |

Probable cause

The character set that the application requested is not supported by the server to which the application was attempting a connection.

**Error 689**

Message text

Input parameter index out of range

| Item       | Value                |
|------------|----------------------|
| SQLCode    | -689                 |
| Constant   | SQLE_BAD_PARAM_INDEX |
| SQLState   | WJ005                |
| ODBC State | S1000                |

Probable cause Valid indices for parameters starts from 1 up to the number of host variables specified in the prepared/callable statement.

## Error 690

Message text Return value cannot be set

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -690                      |
| Constant   | SQLE_RETVAL_CANNOT_BE_SET |
| SQLState   | WJ006                     |
| ODBC State | S1000                     |

Probable cause Setting value of the return parameter of a callable statement is not allowed.

## Error 691

Message text Could not load the backup/restore DLL %1

| Item       | Value                  |
|------------|------------------------|
| SQLCode    | -691                   |
| Constant   | SQLE_BACKUP_NOT_LOADED |
| SQLState   | 08W44                  |
| ODBC State | S1000                  |

Probable cause An attempt to load the backup/restore DLL failed.

## Error 692

Message text Could not execute backup/restore DLL (%1) entry point.

| Item       | Value                       |
|------------|-----------------------------|
| SQLCode    | -692                        |
| Constant   | SQLE_BACKUP_ENTRY_NOT_FOUND |
| SQLState   | 08W45                       |
| ODBC State | S1000                       |

Probable cause An attempt to locate or execute the backup/restore DLL entry point failed.

**Error 693**

Message text                      JDBC feature '%1' not supported

| Item        | Value                         |
|-------------|-------------------------------|
| SQLCode     | -693                          |
| Constant    | SQLE_UNSUPPORTED_JDBC_FEATURE |
| SQLState    | WJ007                         |
| ODBC State  | S1000                         |
| Parameter 1 | name of the attempted feature |

Probable cause                      An attempt was made to use a feature of JDBC that is not supported.

**Error 761**

Message text                      Server capability name %1 could not be found in the SYSCAPABILITYNAME table.

| Item         | Value                             |
|--------------|-----------------------------------|
| SQLCode      | -761                              |
| Constant     | SQLE_CAPABILITY_NOT_FOUND         |
| SQLState     | WO014                             |
| ODBC 2 State | ERROR                             |
| ODBC 3 State | ERROR                             |
| Parameter 1  | the name of the server capability |

Probable cause                      An ALTER SERVER statement was attempted on a capability that was not defined.

**Error 852**

Message text                      Table name '%1' is ambiguous

| Item         | Value                      |
|--------------|----------------------------|
| SQLCode      | -852                       |
| Constant     | SQLE_AMBIGUOUS_TABLE_NAME  |
| SQLState     | 52W42                      |
| ODBC 2 State | S0013                      |
| ODBC 3 State | 42S13                      |
| Parameter 1  | name of an ambiguous table |

Probable cause                      A statement has referred to a table name which is not unique. Preface the table name by an owner name.

## Error 1000

Message text                      Temporary space limit exceeded

| Item       | Value                 |
|------------|-----------------------|
| SQLCode    | -1000                 |
| Constant   | SQLE_TEMP_SPACE_LIMIT |
| SQLState   | 54W05                 |
| ODBC State | S0001                 |

Probable cause                      The connection used more than its quota of Catalog Store temporary file space. This error only occurs when TEMP\_SPACE\_LIMIT\_CHECK = ON and the Catalog temporary file is more than 80% of its maximum size. This limit is based in part on the amount of free space remaining on the drive containing the temporary file. Try deleting unused files from the drive, or placing the temporary file on a drive with more space available.

## Error 100009

Message text                      Cannot DISABLE index '%2'. It is open Read/Write and may have updates pending. %1

| Item        | Value   |
|-------------|---|
| SQLCode     | -100009   |
| Constant    | EMSG_CAT_INDEXENABLERW                          |
| SQLState    | QDA09   |
| ODBC State  | ERROR   |
| Parameter 1 | name of the index user is attempting to disable |
| Parameter 2 | the index the user is attempting to disable     |

Probable cause                      This index cannot be DISABLED. It is open for write access and may have updates pending. Please wait until no other users are using the index.

**Error 1000000**

Message text

Both QUOTES and ESCAPES options must be off. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1000000L                 |
| Constant    | EMSG_INVALIDQUOTESESCAPES |
| SQLState    | QDA00                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |

Probable cause

Sybase IQ only supports LOAD TABLE commands where both the QUOTES and ESCAPES options are OFF.

**Error 1000002**

Message text

Cannot get index id from the catalog. %1

| Item       | Value                   |
|------------|-------------------------|
| SQLCode    | -1000002                |
| Constant   | EMSG_CAT_CANTGETINDEXID |
| SQLState   | QDA02                   |
| ODBC State | ERROR                   |

Probable cause

This is an internal error. Join processing is not able to find an index in the catalog.

**Error 1000003**

Message text

Cross-database joins are not supported. (%2 and %3) %1

| Item       | Value                |
|------------|----------------------|
| SQLCode    | -1000003             |
| Constant   | EMSG_CAT_CROSSDBJOIN |
| SQLState   | QDA03                |
| ODBC State | ERROR                |

Probable cause

Cannot join tables from different databases

## Error 1000004

Message text

Index '%2' already exists and has the same join fields as proposed index'%3'. %1

| Item       | Value         |
|------------|---------------|
| SQLCode    | -1000004      |
| Constant   | EMSG_DUPINDEX |
| SQLState   | QDA04         |
| ODBC State | ERROR         |

Probable cause

This is an internal error. Join processing is trying to create an index id that already exists. If this error occurs, it should be reported to Sybase.

## Error 1000005

Message text

Join index '%2' already exists and has same the join fields as proposed index '%3'. %1

| Item       | Value                 |
|------------|-----------------------|
| SQLCode    | -1000005              |
| Constant   | EMSG_CAT_DUPJOININDEX |
| SQLState   | QDA05                 |
| ODBC State | ERROR                 |

Probable cause

The user is trying to create a join index that already exists and has the same join fields.

## Error 1000007

Message text

Index '%2' was not closed properly. %1

| Item        | Value                          |
|-------------|--------------------------------|
| SQLCode     | -1000007                       |
| Constant    | EMSG_CAT_INDEXBADCLOSE         |
| SQLState    | QDA07                          |
| ODBC State  | ERROR                          |
| Parameter 1 | location of the exception      |
| Parameter 2 | name of the index being closed |

Probable cause This is an internal error. During close join index processing, a join index was not properly closed.

## Error 1000008

Message text Unknown error. %1

| Item       | Value            |
|------------|------------------|
| SQLCode    | -1000008         |
| Constant   | EMSG_CAT_UNKNOWN |
| SQLState   | QDA08            |
| ODBC State | ERROR            |

Probable cause An error condition was encountered for which there is no message.

## Error 1000010

Message text Cannot disable index '%2'. The index is in use. %1

| Item        | Value   |
|-------------|---|
| SQLCode     | -1000010  |
| Constant    | EMSG_CAT_INDEXENABLESINDEX                          |
| SQLState    | QDA10   |
| ODBC State  | ERROR   |
| Parameter 1 | location of the exception                           |
| Parameter 2 | name of the index the user is attempting to disable |

Probable cause This index cannot be DISABLED. It is in use. Please wait until no other users are using the index.

## Error 1000011

Message text Transaction %2 attempted to access an object created by transaction %3. %1

| Item     | Value                  |
|----------|------------------------|
| SQLCode  | -1000011               |
| Constant | EMSG_CAT_FUTUREVERSION |
| SQLState | QDA11                  |

| Item        | Value   |
|-------------|---|
| ODBC State  | ERROR   |
| Parameter 1 | location of the exception   |
| Parameter 2 | the current transaction ID  |
| Parameter 3 | the transaction ID that created the object the user is attempting to access |

Probable cause

This is an internal error. Table-level Versioning does not allow access to versions newer than your current transaction ID.

## Error 100012

Message text

Index '%2' cannot be closed because it has %3 users. %1

| Item        | Value  |
|-------------|--|
| SQLCode     | -100012  |
| Constant    | EMSG_CAT_INDEXINUSE                            |
| SQLState    | QDA12  |
| ODBC State  | ERROR  |
| Parameter 1 | location of the exception                      |
| Parameter 2 | name of the index being closed                 |
| Parameter 3 | the number of users currently using that index |

Probable cause

This is an internal error. The index cannot be closed because it is in use. If this error occurs, it should be reported to Sybase.

## Error 100014

Message text

%2 MB is not sufficient for the load, update, or delete. %1

| Item        | Value  |
|-------------|--|
| SQLCode     | -100014  |
| Constant    | EMSG_INSUFFICIENT_LOAD_MEMORY  |
| SQLState    | QDA14  |
| ODBC State  | ERROR  |
| Parameter 1 | location of the exception  |
| Parameter 2 | user specified upper bound on megabytes of heap memory load/delete/update can actually use |

**Probable cause** The user can control the amount of heap memory a load/delete/update process (LOAD, INSERT VALUE, DELETE, SYNCHRONIZE, UPDATE) can use via the Load\_Memory\_MB option. If this memory limit is not sufficient for the load/delete/update to run, then this exception is raised. To proceed, the user must either turn off the limit (i.e., set Load\_Memory\_MB to zero) or increase the limit.

## Error 100022

**Message text** Index '%2' has an invalid index type: %3. %1

| Item        | Value                          |
|-------------|--------------------------------|
| SQLCode     | -100022                        |
| Constant    | EMSG_CAT_INDEXBADTYPE          |
| SQLState    | QDA22                          |
| ODBC State  | ERROR                          |
| Parameter 1 | location of the exception      |
| Parameter 2 | the index which has a bad type |
| Parameter 3 | the bad index type in question |

**Probable cause** This is an internal error. The index is of a type that is unknown to Sybase IQ.

## Error 100024

**Message text** For table pair %2, table '%3' has a datatype mismatch for column %4. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -100024                   |
| Constant    | EMSG_CAT_JINDEXDATATYPE   |
| SQLState    | QDA24                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | table name                |
| Parameter 3 | table number              |
| Parameter 4 | column number             |

**Probable cause** Corresponding columns in the table pairs must be the same datatype. For example, INTEGER and INTEGER or CHAR and CHAR. Matching datatypes such as CHAR and VARCHAR or INT and SMALLINT is not allowed.

## Error 100026

Message text                      The join virtual table for table '%2' has duplicate columns in positions %3 and %4. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -100026                   |
| Constant    | EMSG_CAT_JINDEXDUPFIELDS  |
| SQLState    | QDA26                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | table name                |
| Parameter 3 | column position           |
| Parameter 4 | column position           |

Probable cause                      The join virtual table has duplicate columns. It may be that the join predicate was not properly specified.

## Error 100027

Message text                      The join virtual table '%2' does not have any data. %1

| Item        | Value                          |
|-------------|--------------------------------|
| SQLCode     | -100027                        |
| Constant    | EMSG_CAT_JINDEXEMPTY           |
| SQLState    | QDA27                          |
| ODBC State  | ERROR                          |
| Parameter 1 | location of the exception      |
| Parameter 2 | name of the join virtual table |

Probable cause                      It was requested that the join index be opened only if it not empty.

## Error 100029

Message text                      Cannot open the requested object for write in the current transaction (%2). Another user has write access in transaction %3. %1

| Item     | Value                |
|----------|----------------------|
| SQLCode  | -100029              |
| Constant | EMSG_CAT_ONLY1WRITER |

| Item        | Value   |
|-------------|---|
| SQLState    | QDA29   |
| ODBC State  | ERROR   |
| Parameter 1 | origin of the exception                           |
| Parameter 2 | transaction ID of the user who is trying to write |
| Parameter 3 | transaction ID of the user currently writing      |

Probable cause

The IQ catalog allows only one transaction at a time to have write access to an object. The user ID of the user who is currently writing to the object can be found by running `sp_iqtransaction` and scanning the output for the transaction ID of the writer that currently has write access.

See Chapter 9, “System Procedures” in the *Sybase IQ Reference Manual* for more information on the `sp_iqtransaction` stored procedure.

## Error 100031

Message text

Join Index '%1' created from the following join relations:

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -100031                   |
| Constant   | EMSG_CAT_JINDEXLOADMSGHDR |
| SQLState   | 00A31                     |
| ODBC State | OK                        |

Probable cause

This informational message appears in the log when the `CREATE JOIN INDEX` command is executed, along with a list of the tables and relationships in the join.

## Warning 100032

Message text

The ultimate/top table is %1

| Item       | Value                           |
|------------|---------------------------------|
| SQLCode    | 100032                          |
| Constant   | EMSG_CAT_JINDEXLOADMSGLNKTABLE1 |
| SQLState   | 00A32                           |
| ODBC State | OK                              |

Probable cause This informational message appears in the log when the CREATE JOIN INDEX command is executed.

## Warning 1000034

Message text Table Name Relationship

| Item       | Value                            |
|------------|----------------------------------|
| SQLCode    | 1000034                          |
| Constant   | EMSG_CAT_JINDEXLOADMSGLINKTABLE3 |
| SQLState   | 00A34                            |
| ODBC State | OK                               |

Probable cause This information message appears in the log when the CREATE JOIN INDEX command is executed, with a list of the tables and relationships in the join.

## Error 1000035

Message text Using views in CREATE JOIN INDEX is not supported. %1

| Item       | Value                       |
|------------|-----------------------------|
| SQLCode    | -1000035                    |
| Constant   | EMSG_NOVIEWS_WITH_JOININDEX |
| SQLState   | QDA35                       |
| ODBC State | ERROR                       |

Probable cause Using views in CREATE JOIN INDEX is not supported.

## Warning 1000037

Message text -----

| Item       | Value                         |
|------------|-------------------------------|
| SQLCode    | 1000037                       |
| Constant   | EMSG_CAT_JINDEXLOADMSGTRAILER |
| SQLState   | 00A37                         |
| ODBC State | OK                            |

Probable cause This is part of an informational message that appears in the log when the CREATE JOIN INDEX command is executed.

## Error 1000045

Message text Index %2 does not exist. %1

| Item        | Value                        |
|-------------|------------------------------|
| SQLCode     | -1000045                     |
| Constant    | EMSG_UTILITY_INDEXNOTFOUND   |
| SQLState    | QDA45                        |
| ODBC State  | ERROR                        |
| Parameter 1 | location of the exception    |
| Parameter 2 | index name given by the user |

Probable cause User has specified an index which does not exist in any table within the current database.

## Error 1000049

Message text '%2' is being used in a self join. Self joins are not allowed. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1000049                  |
| Constant    | EMSG_CAT_JINDEXSELFJOIN   |
| SQLState    | QDA49                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | join virtual table name   |

Probable cause Self joins are not allowed.

## Error 1000050

Message text Table '%2' is used in the join twice. %1

| Item    | Value    |
|---------|----------|
| SQLCode | -1000050 |

| Item       | Value                     |
|------------|---------------------------|
| Constant   | EMSG_CAT_JINDEXTABLETWICE |
| SQLState   | QDA50                     |
| ODBC State | ERROR                     |

Probable cause A table cannot be used twice in a join.

## Error 100051

Message text Cannot retrieve a row from the SYSIQJOINIXTABLE system table. %1

| Item       | Value                 |
|------------|-----------------------|
| SQLCode    | -100051               |
| Constant   | EMSG_CAT_JIXTABLEFIND |
| SQLState   | QDA51                 |
| ODBC State | ERROR                 |

Probable cause This is an internal error. Cannot retrieve a row from the SYSIQJOINIXTABLE system table.

## Error 100052

Message text Cannot delete a row from the SYSIQJOINIXTABLE system table

| Item       | Value                   |
|------------|-------------------------|
| SQLCode    | -100052                 |
| Constant   | EMSG_CAT_JIXTABLEDELETE |
| SQLState   | QDA52                   |
| ODBC State | ERROR                   |

Probable cause This is an internal error. Cannot delete a row from the SYSIQJOINIXTABLE system table.

## Error 100053

Message text Cannot commit changes to the SYSIQJOINIXTABLE system table. %1

| Item       | Value                  |
|------------|------------------------|
| SQLCode    | -1000053               |
| Constant   | EMSG_CAT_JIXTABLEFLUSH |
| SQLState   | QDA53                  |
| ODBC State | ERROR                  |

Probable cause This is an internal error. Cannot commit changes to the SYSIQJOININDEXTABLE system table.

## Error 1000054

Message text Cannot open %2 in Meta (exclusive) mode. Object is already open. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1000054                  |
| Constant    | EMSG_CAT_METAACCESS       |
| SQLState    | QDA54                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | object name               |

Probable cause The object cannot be opened for exclusive access because it is already open.

## Warning 1000055

Message text Warning: %1

| Item       | Value             |
|------------|-------------------|
| SQLCode    | 1000055           |
| Constant   | EMSG_CLBK_WARNING |
| SQLState   | 01A55             |
| ODBC State | OK                |

Probable cause This message appears in context with other warnings.

## Error 100056

Message text

Cannot convert from datatype '%2' to '%3' for column '%4'. '%1'

| Item        | Value                         |
|-------------|-------------------------------|
| SQLCode     | -100056                       |
| Constant    | EMSG_CAT_NOCONVERSIONPOSSIBLE |
| SQLState    | QDA56                         |
| ODBC State  | ERROR                         |
| Parameter 1 | location of the exception     |
| Parameter 2 | datatype                      |
| Parameter 3 | datatype                      |
| Parameter 4 | column name                   |

Probable cause

Implicit conversion for this column is not possible.

## Error 100057

Message text

Column '%2' has an unknown datatype: '%3'. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -100057                   |
| Constant    | EMSG_CAT_NODATATYPE       |
| SQLState    | QDA57                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | column number             |
| Parameter 3 | the unknown datatype      |

Probable cause

The column is of a datatype that is unknown to Sybase IQ.

## Warning 100058

Message text

Unable to synchronize join index %1.

| Item     | Value                  |
|----------|------------------------|
| SQLCode  | 100058                 |
| Constant | EMSG_UNABLE_SYNC_INDEX |
| SQLState | 01A59                  |

| Item       | Value |
|------------|-------|
| ODBC State | OK    |

Probable cause

The SYNCHRONIZE operation failed for the index because exclusive access to it cannot be obtained. Try the operation later when there are no other users of the index.

## Error 1000060

Message text

Column '%2', PRECISION (%3) cannot be greater than %4. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1000060                  |
| Constant    | EMSG_CAT_PRECISIONTOOBIG  |
| SQLState    | QDA60                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | column number             |
| Parameter 3 | requested precision       |
| Parameter 4 | maximum allowed precision |

Probable cause

The precision requested by the user is larger than what is allowed for the datatype.

## Error 1000061

Message text

Column %2 PRECISION (%3) cannot be less than 0. %1

| Item       | Value                       |
|------------|-----------------------------|
| SQLCode    | -1000061                    |
| Constant   | EMSG_CAT_PRECISIONTPP SMALL |
| SQLState   | QDA61                       |
| ODBC State | ERROR                       |

Probable cause

The precision specified by the user is less than zero.

## Error 100062

Message text

Cannot add column with not null constraint on table %2 with data. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -100062                   |
| Constant    | EMSG_TABLEHASDATA         |
| SQLState    | QDC35                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | table name                |

Probable cause

The user tried to alter add a NOT NULL column to a table that has data. The newly added column will violate the not null constraint as it will have null data by default for the newly added column.

## Error 100063

Message text

Cannot enforce the NOT NULL constraint. Column %2 has NULL data. %1

| Item       | Value                  |
|------------|------------------------|
| SQLCode    | -100063                |
| Constant   | EMSG_COLUMNHASNULLDATA |
| SQLState   | QDC34                  |
| ODBC State | ERROR                  |

Probable cause

The user tried ALTER MODIFY column NOT NULL on a column that used to allow nulls and has null data in it. First delete the null rows before altering the column to enforce the NOT NULL constraint.

## Error 100064

Message text

Column %2 cannot be altered because it participates in join %3. %1

| Item       | Value                       |
|------------|-----------------------------|
| SQLCode    | -100064                     |
| Constant   | EMSG_CAT_JOINFIELDINPREJOIN |
| SQLState   | QDA64                       |
| ODBC State | ERROR                       |

**Probable cause** A column/field that participates in a join has restrictions on any Alter changes that can occur. The user must delete joins on this field before an Alter can be performed.

## Error 1000065

**Message text** Table %2 MUST be owned by the creator of the join. %1

| Item       | Value                   |
|------------|-------------------------|
| SQLCode    | -1000065                |
| Constant   | EMSG_CAT_TABLEOWNERDIFF |
| SQLState   | QDA65                   |
| ODBC State | ERROR                   |

**Probable cause** This error message is given during CREATE JOIN INDEX when one of the tables specified is not owned by the owner of the join. Joins can only be created from tables of the same owner.

## Error 1000066

**Message text** ALTER on the column would interfere with the natural join to table %2 in join %3. %1

| Item       | Value                   |
|------------|-------------------------|
| SQLCode    | -1000066                |
| Constant   | EMSG_CAT_JOINFILDNATMAT |
| SQLState   | QDA66                   |
| ODBC State | ERROR                   |

**Probable cause** This message is displayed when using the ALTER command or adding columns to a table participates.

## Error 1000067

**Message text** Table '%2' is not defined in the catalog. %1

| Item     | Value                  |
|----------|------------------------|
| SQLCode  | -1000067               |
| Constant | EMSG_CAT_TABLENOTINCAT |

| Item        | Value                     |
|-------------|---------------------------|
| SQLState    | QDA67                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | table name                |

Probable cause

This is an internal error. The table does not exist in the catalog. If this error occurs, it should be reported to Sybase.

## Warning 100068

Message text

The '%1' join index is in use for table '%2'.

| Item        | Value                           |
|-------------|---------------------------------|
| SQLCode     | 100068                          |
| Constant    | EMSG_CAT_OPENJOININDEXTHRUTABLE |
| SQLState    | 00A68                           |
| ODBC State  | OK                              |
| Parameter 1 | location of the error           |
| Parameter 2 | table name                      |

Probable cause

This is an informational message.

## Error 100078

Message text

IQ PAGE SIZE of '%2' for database '%3' is not valid. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -100078                   |
| Constant    | EMSG_HDB_INVALIDPAGESIZE  |
| SQLState    | QDA78                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | requested PAGE SIZE       |
| Parameter 3 | database name             |

Probable cause An invalid IQ PAGE SIZE was specified. IQ PAGE SIZE must be one of 65536, 131072, 262144, or 524288. See the *Sybase IQ Reference Manual* and the *Sybase IQ System Administration Guide* for IQ PAGE SIZE recommendations.

## Error 1000079

Message text IQ SIZE of '%2' for database '%3' is not valid. %1

| Item        | Value                        |
|-------------|------------------------------|
| SQLCode     | -1000079                     |
| Constant    | EMSG_HDB_INVALIDDATABASESIZE |
| SQLState    | QDA79                        |
| ODBC State  | ERROR                        |
| Parameter 1 | location of the exception    |
| Parameter 2 | requested IQ SIZE            |
| Parameter 3 | database name                |

Probable cause The maximum IQ SIZE is 128GB.

## Error 1000080

Message text Join index %1 already synchronized.

| Item        | Value                  |
|-------------|------------------------|
| SQLCode     | -1000080               |
| Constant    | EMSG_JOIN_ALREADY_SYNC |
| SQLState    | 00A80                  |
| ODBC State  | OK                     |
| Parameter 1 | join index name        |

Probable cause The join index is already synchronized.

## Error 1000081

Message text The field array for the table '%2' must have at least 1 entry; it has %3 entries.  
%1

| Item       | Value                   |
|------------|-------------------------|
| SQLCode    | -100081                 |
| Constant   | EMSG_HDB_FIELDARRAYSIZE |
| SQLState   | QDA81                   |
| ODBC State | ERROR                   |

Probable cause

This is an internal error. At least one column must be specified to populate a join index. If this error occurs, it should be reported to Sybase.

## Error 100082

Message text

The insert must contain all table's '%2' columns because it participates in one or more joins. %1

| Item       | Value                       |
|------------|-----------------------------|
| SQLCode    | -100082                     |
| Constant   | EMSG_INSRT_MUSTBE_FULLWIDTH |
| SQLState   | QDA82                       |
| ODBC State | ERROR                       |

Probable cause

If a table participates in a join, then the user cannot load data into that table using a partial width insert.

## Error 100083

Message text

The field array entry must be given a name. %1

| Item       | Value                |
|------------|----------------------|
| SQLCode    | -100083              |
| Constant   | EMSG_HDB_FIELDNONAME |
| SQLState   | QDA83                |
| ODBC State | ERROR                |

Probable cause

This is an internal error. If this error occurs, it should be reported to Sybase.

## Error 100084

Message text

The %2th join field array entry for table '%3' must have a name. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1000084                  |
| Constant    | MSG_HDB_FIRLDNOJOINNAME   |
| SQLState    | QDA84                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | field array entry         |
| Parameter 3 | table name                |

Probable cause This is an internal error. If this error occurs, it should be reported to Sybase.

## Error 1000085

Message text The join field array for table '%2' must have at least one entry. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1000085                  |
| Constant    | MSG_HDB_FIELDNOJOINNAMES  |
| SQLState    | QDA85                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | table name                |

Probable cause This an internal error. If this error occurs, it should be reported to Sybase.

## Error 1000095

Message text The join index %1 could not be used in the query because it needs synchronization.

| Item        | Value                |
|-------------|----------------------|
| SQLCode     | -1000095             |
| Constant    | MSG_JOININDEXINVALID |
| SQLState    | QDA95                |
| ODBC State  | OK                   |
| Parameter 1 | name of join index   |

Probable cause            A join index was found to help execute the query, but it could not be used because it requires synchronization. Use the SYNCHRONIZE command to synchronize the join index.

## Error 100097

Message text            DBCC: Parse Error in DBCC command at '%2'. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -100097                   |
| Constant    | EMSG_DBCC_PARSEERROR      |
| SQLState    | QDA97                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | start of the parse error  |

Probable cause            Consult Chapter 9, “System Procedures” in the *Sybase IQ Reference Manual* for the correct syntax of the sp\_iqcheckdb input parameter string.

## Error 100098

Message text            Creating a join index on 'varchar' datatype column of size > 255 is not supported. %1

| Item       | Value                              |
|------------|------------------------------------|
| SQLCode    | -100098                            |
| Constant   | EMSG_CAT_JINDEXLVCHAR_NOTSUPPORTED |
| SQLState   | QDA98                              |
| ODBC State | ERROR                              |

Probable cause            IQ does not support creating a join index on columns that are of datatype 'varchar' whose size is greater than 255.

## Error 100099

Message text            The PAGE SIZE divided by the BLOCK SIZE must be equal to 2, 4, 8, or 16. Database: %2 PAGE SIZE: %3 BLOCK SIZE: %4. %1

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -1000099                  |
| Constant   | EMSG_HDB_INVALIDCHUNKSIZE |
| SQLState   | QDA99                     |
| ODBC State | ERROR                     |

Probable cause (PAGE SIZE)/(BLOCK SIZE) must be one of the 2, 4, 8, 16. Adjust the PAGE SIZE or the BLOCK SIZE in the CREATE DATABASE statement.

## Error 1000100

Message text Cannot INSERT, LOAD or UPDATE a join virtual table. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1000100L                 |
| Constant    | EMSG_SQL_NOINSERTJVT      |
| SQLState    | QDB00                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |

Probable cause The user is not allowed to INSERT or to LOAD a join virtual table. Instead you must INSERT to or LOAD the tables which participate in the join and execute the SYNCHRONIZE command.

## Error 1000101

Message text %2 not supported by Sybase IQ. %1

| Item        | Value                      |
|-------------|----------------------------|
| SQLCode     | -1000101L                  |
| Constant    | EMSG_SQL_STMT_NOTSUPPORTED |
| SQLState    | QDB01                      |
| ODBC State  | ERROR                      |
| Parameter 1 | location of the exception  |
| Parameter 2 | the unsupported statement  |

Probable cause The SQL statement is not supported by Sybase IQ.

## Error 1000106

Message text Local temporary table, %2, must be committed in order to create an index. %1

| Item        | Value                           |
|-------------|---------------------------------|
| SQLCode     | -1000106                        |
| Constant    | EMSG_CAT_CANNOT_CREATEIDX_ONLTT |
| SQLState    | QDB06                           |
| ODBC State  | ERROR                           |
| parameter 1 | Origin of the exception         |
| Parameter 2 | table name                      |

Probable cause Using the CREATE INDEX command on a local temporary table containing uncommitted data may cause the server to fail and generate this error message. Be sure to commit the data in the local temporary table before creating an index.

## Warning 1000108

Message text The DELETE where clause yielded %1 rows, but table '%2' has no data.

| Item        | Value                   |
|-------------|-------------------------|
| SQLCode     | 1000108                 |
| Constant    | EMSG_DELETE_TABLENODATA |
| SQLState    | 01B08                   |
| ODBC State  | OK                      |
| Parameter 1 | number of rows          |
| Parameter 2 | table name              |

Probable cause This is an internal error. This error should not occur during normal use. If this error occurs, it should be reported to Sybase.

## Warning 1000109

Message text For table %1, join index %2 was modified. %3 rows were deleted.

| Item     | Value                     |
|----------|---------------------------|
| SQLCode  | 1000109                   |
| Constant | EMSG_DELETE_CBT1JOINONTOP |
| SQLState | 00B09                     |

| Item       | Value |
|------------|-------|
| ODBC State | OK    |

Probable cause Informational message regarding rows deleted from a table.

## Error 1000113

Message text Field %2 does not have an FP index. %1

| Item        | Value                        |
|-------------|------------------------------|
| SQLCode     | -1000113L                    |
| Constant    | EMSG_CAT_FIELD_HAS_NOFPINDEX |
| SQLState    | QDB13                        |
| ODBC State  | ERROR                        |
| Parameter 1 | location of the exception    |
| Parameter 2 | field name                   |

Probable cause This error should not occur during normal operation. Every field has an FP index which is created automatically when the field is created. If the error occurs, diagnostic information will be output to the *.iqmsg* file and the operation that caused it can be tried again. If the problem persists, shut down the server and restart it. Report an occurrence of this error to Sybase.

## Error 1000115

Message text You cannot delete from join index %2 in the 'top' table \$3. %1

| Item        | Value                              |
|-------------|------------------------------------|
| SQLCode     | -1000115                           |
| Constant    | EMSG_DELETE_ISTOPTABLEINJOIN       |
| SQLState    | QDB15                              |
| ODBC State  | ERROR                              |
| Parameter 1 | location of the exception          |
| Parameter 2 | join index name                    |
| Parameter 3 | name of the top table in the index |

Probable cause This is an internal error. You cannot delete from the top table in a join. If this error occurs, it should be reported to Sybase.

## Warning 1000117

Message text

The data to be inserted into table '%2', column '%1' cannot be converted to the datatype of the column. NULL will be inserted if the column allows NULLs.

| Item        | Value                          |
|-------------|--------------------------------|
| SQLCode     | 1000117L                       |
| Constant    | EMSG_CANNOT_CONVERT_FOR_INSERT |
| SQLState    | 00B17                          |
| ODBC State  | OK                             |
| Parameter 1 | the column being inserted into |
| Parameter 2 | the table being inserted into  |

Probable cause

The database option `CONVERSION_ERROR` is set to 'OFF' for this INSERT. The data to be inserted to the named column cannot be converted to the data type of that column. If the column allows NULL, then NULL is inserted instead. If the column does not allow NULL, then the error "Tried to insert a null value into a non-null field field\_name on row row\_number." is returned.

## Error 1000118

Message text

Join index %2 was not found in the catalog. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1000118                  |
| Constant    | EMSG_DELETE_NOJOININDEX   |
| SQLState    | QDB18                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | join index name           |

Probable cause

This is an internal error. If this error occurs, it should be reported to Sybase.

## Warning 1000119

Message text

The data to be inserted into table '%2', column '%1' from row '%3' of the select results cannot be converted to the datatype of the destination column. NULL will be inserted if the column allows NULLs.

| Item        | Value  |
|-------------|--|
| SQLCode     | 1000119L   |
| Constant    | EMSG_CANNOT_CONVERT_FOR_INSERT_SELECT  |
| SQLState    | 00B19  |
| ODBC State  | OK   |
| Parameter 1 | the column being inserted into   |
| Parameter 2 | the table being inserted into  |
| Parameter 3 | the row number in the SELECT results that contains the data that cannot be converted |

Probable cause

The database option `CONVERSION_ERROR` is set to 'OFF' for this `INSERT...SELECT`. During `INSERT...SELECT`, the data to be inserted to one of the columns cannot be converted to the data type of that column. If the column allows `NULL`, then `NULL` is inserted instead. If the column does not allow `NULL`, then the error “Tried to insert a null value into a non-null field `field_name` on row `row_number`.” is returned.

## Error 1000120

Message text

Join %2 was not found in the catalog. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1000120                  |
| Constant    | EMSG_DELETE_NOJOINTABLE   |
| SQLState    | QDB20                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | join virtual table name   |

Probable cause

This is an internal error. If this error occurs, it should be reported to Sybase.

## Error 1000121

Message text

binary data not supported on data longer than 32767 %2, %1

| Item     | Value                    |
|----------|--------------------------|
| SQLCode  | -1000121L                |
| Constant | EMSG_BINARYINPUTTOOLARGE |

| Item        | Value                     |
|-------------|---------------------------|
| SQLState    | QDB21                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | SA parse source code line |

Probable cause            You have input a binary string that is too long.

## Warning 1000122

Message text            The data to update table '%2', column '%1' cannot be converted to the datatype of the destination column for update number %3 to the table. NULL will be inserted if the column allows NULLs.

| Item        | Value                          |
|-------------|--------------------------------|
| SQLCode     | 1000122L                       |
| Constant    | EMSG_CANNOT_CONVERT_FOR_UPDATE |
| SQLState    | 00B22                          |
| ODBC State  | OK                             |
| Parameter 1 | the column being updated       |
| Parameter 2 | the table being updated        |
| Parameter 3 | the nth update to the table    |

Probable cause            The database option `CONVERSION_ERROR` is set to 'OFF' for this UPDATE. During UPDATE, the data to update one of the columns cannot be converted to the data type of the column. The update number represents the number of updates made to the table and is not necessarily the row number of the table being updated. The column is updated with NULL, if the column definition allows NULLs. If the column does not allow NULL, then the error “Tried to insert a null value into a non-null field field\_name on row row\_number.” is returned.

## Error 1000125

Message text            Table %2 is not part of join index %3. %1

| Item     | Value                      |
|----------|----------------------------|
| SQLCode  | -1000125                   |
| Constant | EMSG_DELETE_TABLENOTINJOIN |

| Item        | Value                     |
|-------------|---------------------------|
| SQLState    | QDB25                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | table index               |
| Parameter 3 | join index name           |

Probable cause This is an internal error. If this error occurs, it should be reported to Sybase.

## Error 1000128

Message text You must delete from join index %2 before you can delete from table %3. %1

| Item        | Value                          |
|-------------|--------------------------------|
| SQLCode     | -1000128                       |
| Constant    | EMSG_DELETE_TOPTABLEDATAINJOIN |
| SQLState    | QDB28                          |
| ODBC State  | ERROR                          |
| Parameter 1 | location of the exception      |
| Parameter 2 | join index name                |
| Parameter 3 | table name                     |

Probable cause This is an internal error. If this error occurs, it should be reported to Sybase.

## Error 1000132

Message text In table '%2', the START ROW ID value (%3) must be greater than %4. Data has already been inserted at this location. %1

| Item        | Value                        |
|-------------|------------------------------|
| SQLCode     | -1000132                     |
| Constant    | EMSG_INSRT_BADSTARTRECID     |
| SQLState    | QDB32                        |
| ODBC State  | ERROR                        |
| Parameter 1 | location of the exception    |
| Parameter 2 | table name                   |
| Parameter 3 | requested START ROW ID value |
| Parameter 4 | row ID value                 |

**Probable cause** You have entered an incorrect `START ROW ID` and trying to insert into a column that already contains data. See Chapter 7, “Moving Data In and Out of Databases” in the *Sybase IQ System Administration Guide*. The section on partial width inserts contains information regarding the `START ROW ID` option.

## Error 1000134

**Message text** Column '%2' is being inserted into twice by this insert command. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1000134                  |
| Constant    | EMSG_INSRT_DUPFIELD       |
| SQLState    | QDB34                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | column name               |

**Probable cause** The specified column was listed twice in the insert command.

## Error 1000135

**Message text** Cannot open the existence list for table '%2'. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1000135                  |
| Constant    | EMSG_INSRT_EXISTENCEBM    |
| SQLState    | QDB35                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | table name                |

**Probable cause** This is an internal error.

## Error 1000136

**Message text** A mismatch exists between the existence bitmaps in the insert object. %1

| Item       | Value                        |

| Constant    | MSG_INSERT_HASJOINPASTEND     |
| SQLState    | QDB39                         |
| ODBC State  | ERROR                         |
| Parameter 1 | location of the exception     |
| Parameter 2 | table name                    |
| Parameter 3 | number of join virtual tables |

Probable cause This is an internal error. If this error occurs, it should be reported to Sybase.

## Error 1000140

Message text

You cannot change column '%2' because it is a 'link' column. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1000140                  |
| Constant    | EMSG_INSRT_HASLINK        |
| SQLState    | QDB40                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | column name               |

Probable cause

This is an internal error. If this error occurs, it should be reported to Sybase.

## Error 1000141

Message text

Column '%2' must be included in the LOAD since it is used in a join. %1

| Item        | Value                       |
|-------------|-----------------------------|
| SQLCode     | -1000141                    |
| Constant    | EMSG_INSRT_JOINFLDNOTINLOAD |
| SQLState    | QDB41                       |
| ODBC State  | ERROR                       |
| Parameter 1 | location of the exception   |
| Parameter 2 | column name                 |

Probable cause

All columns participating in a join index must be included in the insert.

## Error 1000145

Message text

The insert for table '%2' has no insertable columns in the column list. %1

| Item       | Value                         |
|------------|-------------------------------|
| SQLCode    | -1000145                      |
| Constant   | EMSG_INSRT_NOINSERTABLEFIELDS |
| SQLState   | QDB45                         |
| ODBC State | ERROR                         |

Probable cause

You are not able to insert to any of the columns in the INSERT statement's insert column list.

## Error 1000151

Message text NOT NULL column '%2' was not included in this insert. Data is needed at row %3. %1

| Item        | Value                         |
|-------------|-------------------------------|
| SQLCode     | -1000151                      |
| Constant    | EMSG_INSRT_NOTNULLFIELDNOTINC |
| SQLState    | QDB51                         |
| ODBC State  | ERROR                         |
| Parameter 1 | location of the exception     |
| Parameter 2 | column name                   |
| Parameter 3 | row name                      |

Probable cause You must provide data to be inserted into columns defined as NOT NULL.

## Error 1000152

Message text The NOT NULL column '%2' was not included in this insert. %1

| Item        | Value                    |
|-------------|--------------------------|
| SQLCode     | -1000152                 |
| Constant    | EMSG_INSRT_NOTNULLNOTINC |
| SQLState    | QDB52                    |
| ODBC State  | ERROR                    |
| Parameter 1 | origin of the exception  |
| Parameter 2 | column name              |

Probable cause You must provide data to be inserted into columns defined as NOT NULL.

## Error 1000153

Message text Table '%2', pass-x index count mismatch(%3/%4). %1

| Item       | Value              |
|------------|--------------------|
| SQLCode    | -1000153           |
| Constant   | EMSG_INSRT_PXCOUNT |
| SQLState   | QDB53              |
| ODBC State | ERROR              |

| Item        | Value                      |
|-------------|----------------------------|
| Parameter 1 | location of the exception  |
| Parameter 2 | table name                 |
| Parameter 3 | number used for comparison |
| Parameter 4 | number used for comparison |

Probable cause This is an internal error. If this error occurs, it should be reported to Sybase.

## Error 1000157

Message text Columns for the index must be in ascending order. %1

| Item        | Value                          |
|-------------|--------------------------------|
| SQLCode     | -1000157L                      |
| Constant    | EMSG_ASCENDING_SORT_ORDER_ONLY |
| SQLState    | QDB57                          |
| ODBC State  | ERROR                          |
| Parameter 1 | location of the exception      |

Probable cause The keyword DESC was used in the CREATE INDEX statement. Sybase IQ permits ascending indexes only.

## Error 1000158

Message text An Identity size mismatch has occurred. The current transaction will rollback.  
%1

| Item       | Value                    |
|------------|--------------------------|
| SQLCode    | -1000158                 |
| Constant   | EMSG_CAT_IDSIZE_MISMATCH |
| SQLState   | QDB58                    |
| ODBC State | ERROR                    |

Probable cause IQ has encountered an Identity size mismatch. The current command will be rolled back. If this error occurs, try to repeat the operation that caused it. If the error occurs again, the server should be stopped and restarted. If the problem persists, Sybase should be notified of the error.

## Error 1000162

Message text Unable to create the requested object. %1

| Item        | Value                         |
|-------------|-------------------------------|
| SQLCode     | -1000162                      |
| Constant    | EMSG_CAT_CANNOT_CREATE_OBJECT |
| SQLState    | QDB62                         |
| ODBC State  | ERROR                         |
| Parameter 1 | location of the exception     |

Probable cause IQ is not able to create the object that was requested. This object may be an FP index that is being created during a CREATE TABLE. This error will occur if IQ finds that the index already exists in the table for which it is being created. This can happen if you FORCE DROP a table and then try to recreate the table that was dropped. If this error occurs after a FORCE DROP, the server must be restarted before continuing. If this error occurs for any reason, notify Sybase Technical Support. Extra diagnostic information is output to the *.iqmsg* file.

## Error 1000163

Message text %1 not supported.

| Item        | Value              |
|-------------|--------------------|
| SQLCode     | -1000163           |
| Constant    | EMSG_NOT_SUPPORTED |
| SQLState    | QNA32              |
| ODBC State  | ERROR              |
| Parameter 1 | Name of operation  |

Probable cause The named operation is not supported. If the foreign key constraint does not support the NOT NULL option, remove the NOT NULL option. If the foreign key is also a primary key or unique constraint, then none of its columns can be null.

## Error 1000164

Message text Only %1 supported.

| Item        | Value                      |
|-------------|----------------------------|
| SQLCode     | -1000164                   |
| Constant    | EMSG_RESTRICT_ONLY         |
| SQLState    | QNA33                      |
| ODBC State  | ERROR                      |
| Parameter 1 | Type of RESTRICT supported |

Probable cause

You specified a referential integrity action for UPDATE or DELETE other than RESTRICT. Specify ON UPDATE RESTRICT or ON DELETE RESTRICT in the foreign key constraint for the action.

## Error 1000165

Message text

Only a single foreign key constraint can be created on the same foreign key column(s) and same candidate key column(s).

| Item       | Value                       |
|------------|-----------------------------|
| SQLCode    | -1000165                    |
| Constant   | EMSG_SINGLE_FKEY_CONSTRAINT |
| SQLState   | QNA34                       |
| ODBC State | ERROR                       |

Probable cause

For a given set of foreign key columns and candidate key columns, you can only create a single foreign key constraint on the same foreign key column(s) and same candidate key column(s).

## Error 1000167

Message text

Cannot %3 table %2 because of RI concurrency conflict. %1

| Item        | Value  |
|-------------|--|
| SQLCode     | -1000167                                     |
| Constant    | EMSG_RI_CONCURRENCY_CONFLICT                 |
| SQLState    | QDB67  |
| ODBC State  | ERROR  |
| Parameter 1 | origin of the exception                      |
| Parameter 2 | name of table undergoing the given operation |

| Item        | Value  |
|-------------|--|
| Parameter 3 | operation being performed on the specified table (load/insert/delete/truncate) |

Probable cause

You tried to delete, truncate, or update the candidate key at the same time its corresponding foreign key was being loaded/inserted/updated.

## Error 1000168

Message text

Cannot create %1 HG index because one already exists on the given columns.

| Item        | Value   |
|-------------|---|
| SQLCode     | -1000168  |
| Constant    | EMSG_CANNOT_CREATE_HG                             |
| SQLState    | QNA35   |
| ODBC State  | ERROR   |
| Parameter 1 | Type of HG index to create (non-unique or unique) |

Probable cause

More than one HG index of a given type exists on the same column set. For example, you cannot have two unique HG indexes on the same column set, but you may have a unique HG and a non-unique HG index on the same set of columns.

## Error 1000169

Message text

Cannot create unique HG index because primary key or unique constraint already exists on the given columns.

| Item       | Value                        |
|------------|------------------------------|
| SQLCode    | -1000169                     |
| Constant   | EMSG_CANNOT_CREATE_UNIQUE_HG |
| SQLState   | QNA36                        |
| ODBC State | ERROR                        |

Probable cause

When you create a primary key or unique constraint, IQ automatically creates a unique HG index as the mechanism for enforcing the 'uniqueness' attribute of a primary key or unique constraint. Consequently, a user cannot create another unique HG on the same columns on which the primary key or unique constraint is defined.

## Error 1000170

Message text

Cannot create a duplicate '%2' index '%3'. %1

| Item        | Value                   |
|-------------|-------------------------|
| SQLCode     | -1000170                |
| Constant    | EMSG_SQL_INDEXFOUND     |
| SQLState    | QCA22                   |
| ODBC State  | ERROR                   |
| Parameter 1 | origin of the exception |
| Parameter 2 | index type              |
| Parameter 3 | index name              |

Probable cause

Cannot create duplicate indexes of the same type on a set of columns.

## Error 1000185

Message text

Cannot drop table %1 because foreign keys still reference it.

| Item        | Value                           |
|-------------|---------------------------------|
| SQLCode     | -1000185                        |
| Constant    | EMSG_FKEY_STILL_EXISTS_TO_TABLE |
| SQLState    | QNA39                           |
| ODBC State  | ERROR                           |
| Parameter 1 | name of the table               |

Probable cause

An associated foreign key constraint still exists. You cannot drop the named table until you first drop all foreign keys that reference it.

## Error 1000186

Message text

Cannot create foreign key constraint on a candidate key that is also a foreign key.

| Item       | Value                  |
|------------|------------------------|
| SQLCode    | -1000186               |
| Constant   | EMSG_CKEY_IS_ALSO_FKEY |
| SQLState   | QNA40                  |
| ODBC State | ERROR                  |

Probable cause                    A candidate key cannot also be a foreign key.

## Error 1000187

Message text                    Unable to implicitly convert column '%2' to datatype (%3) from datatype (%4).  
%1

| Item        | Value                          |
|-------------|--------------------------------|
| SQLCode     | -1000187L                      |
| Constant    | EMSG_SQL_IMPLICITCONVERSION    |
| SQLState    | QCB87                          |
| ODBC State  | ERROR                          |
| Parameter 1 | location of the exception      |
| Parameter 2 | name of column being converted |
| Parameter 3 | data type being converted to   |
| Parameter 4 | data type being converted from |

Probable cause                    The attempted implicit data type conversion is not possible. The conversion must be done explicitly.

If you attempt an implicit conversion to or from a NUMERIC column and this error is returned, the data type displayed in the error for the NUMERIC column is SMALLINT, INT, or INT64, depending on the precision of the NUMERIC. NUMERIC columns are treated internally as multiple precision signed integers.

## Error 1000189

Message text                    DDL statements cannot proceed while the %2 is in an out of space condition.  
%1

| Item        | Value                       |
|-------------|-----------------------------|
| SQLCode     | -1000189                    |
| Constant    | EMSG_NODDL_WHILE_OUTOFSPACE |
| SQLState    | QDB89                       |
| ODBC State  | ERROR                       |
| Parameter 1 | Store that is out of space  |
| Parameter 2 | location of the exception   |

**Probable cause** You attempted to issue a DDL statement while an out of space condition existed in that store. No DDL is allowed on the main or temporary store if a non-temporary table is out of space; no DDL is allowed on the temporary store if a temporary table is out of space. The operation is rolled back.

## Error 1000191

**Message text** Proxy, remote, or non-IQ tables are not allowed in joins. Tablename is '%2'. %1

| Item        | Value   |
|-------------|---|
| SQLCode     | -1000191L   |
| Constant    | EMSG_NOALIENTABLES                                |
| SQLState    | QDB91   |
| ODBC State  | ERROR   |
| Parameter 1 | location of the exception                         |
| Parameter 2 | name of the table that is not allowed in the view |

**Probable cause** Proxy tables, remote objects, or non-IQ tables are not allowed to participate in a join index.

## Error 1000195

**Message text** LOAD specification '%2' only valid for column(s) having datatype '%3'. %1

| Item        | Value                      |
|-------------|----------------------------|
| SQLCode     | -1000195L                  |
| Constant    | EMSG_BINARYFILE            |
| SQLState    | QDB95                      |
| ODBC State  | ERROR                      |
| Parameter 1 | location of the exception  |
| Parameter 2 | type of load specification |
| Parameter 3 | data type of column        |

**Probable cause** The named load specification in a LOAD TABLE statement is only valid for columns with the given data type.

## Error 1000198

Message text                      Cannot create join index with table(s) having column(s) of datatype %2. %1

| Item        | Value                         |
|-------------|-------------------------------|
| SQLCode     | -1000198L                     |
| Constant    | EMSG_CANNOT_CREATE_JOIN_INDEX |
| SQLState    | QDB98                         |
| ODBC State  | ERROR                         |
| Parameter 1 | location of the exception     |
| Parameter 2 | data type of column           |

Probable cause                      This error is reported when you attempt to create a join index on a table that has one or more LONG VARCHAR or LONG BINARY data type columns. The JOIN INDEX functionality is supported for most data types. There are a few data types, however, for which this functionality is not supported (for example, LONG BINARY and LONG VARCHAR).

## Warning 1000199

Message text                      Table '%1' has no data.

| Item        | Value                                  |
|-------------|--|
| SQLCode     | -1000199L                              |
| Constant    | EMSG_JOIN_NODATAINBASESRC              |
| SQLState    | 01B99                                  |
| ODBC State  | OK                                     |
| Parameter 1 | the name of the table that has no data |

Probable cause                      This is a warning that there is no data in a base table.

## Error 1000215

Message text                      An invalid filler option (e.g., filler()) was specified in the load statement. %1

| Item       | Value                      |
|------------|----------------------------|
| SQLCode    | -1000215L                  |
| Constant   | EMSG_INVALID_FILLER_OPTION |
| SQLState   | QDC15                      |
| ODBC State | ERROR                      |

| Item        | Value                     |
|-------------|---------------------------|
| Parameter 1 | location of the exception |

Probable cause      An invalid filler option was specified on the LOAD TABLE statement.

## Error 1000225

Message text      Cannot open table %2. The table has already been opened by a cursor declared FOR UPDATE in transaction %3. %1

| Item              | Value   |
|-------------------|---|
| SQLCode           | -1000225L   |
| Constant          | EMSG_CAT_CANNOT_OPEN_TABLE                                    |
| SQLState          | QDC25   |
| Sybase error code | 20885   |
| ODBC State        | ERROR   |
| Parameter 1       | location of the exception                                     |
| Parameter 2       | table name  |
| Parameter 3       | The ID of the transaction during which the cursor was opened. |

Probable cause      A table opened by a cursor that has been declared FOR UPDATE cannot be opened again by another operation.

## Error 1000226

Message text      Location string passed to the attached database insert was invalid. %1

| Item       | Value                |
|------------|----------------------|
| SQLCode    | -1000226             |
| Constant   | EMSG_INVALIDLOCATION |
| SQLState   | QDC36                |
| ODBC State | ERROR                |

Probable cause      The user passed an invalid location string in an attached database insert.

## Error 1000227

Message text      Cannot load data with both BINARY and delimited columns. %1

| Item       | Value                    |
|------------|--------------------------|
| SQLCode    | -1000227                 |
| Constant   | EMSG_LOADBINARYDELIMITED |
| SQLState   | QDC37                    |
| ODBC State | ERROR                    |

Probable cause You cannot load data with both `BINARY` and delimited columns in the same command.

## Error 1000229

Message text Only `BINARY [WITH NULL BYTE]` can be used as a column specification when using `UNLOAD FORMAT. %1`

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1000229                  |
| Constant    | EMSG_CANTUSEINLOAD        |
| SQLState    | QDC38                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |

Probable cause When using `UNLOAD FORMAT`, you cannot use any column specification other than `BINARY`. If you need to load null values for a column using the `BINARY` column specification, use the `WITH NULL BYTE` option. You cannot use the `[ ROW ] DELIMITED` options with `UNLOAD FORMAT`.

## Error 1000230

Message text Columns that allow nulls must use the `WITH NULL BYTE` option. %1

| Item       | Value                |
|------------|----------------------|
| SQLCode    | -1000230             |
| Constant   | EMSG_MUSTUSENULLBYTE |
| SQLState   | QDC39                |
| ODBC State | ERROR                |

Probable cause The user must use the `WITH NULL BYTE` option for a `BINARY` column-spec for columns that allow nulls.

## Error 1000233

Message text                      Cannot SYNCHRONIZE join index %2. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1000233                  |
| Constant    | EMSG_CANNOT_SYNCHRONIZE   |
| SQLState    | QDC33                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | join index name           |

Probable cause                      The requested SYNCHRONIZE operation for the named join index failed because not all read-write locks could be obtained for all tables and related joins/tables in the join indexes' transitive closure.

## Warning 1000234

Message text                      \nInsert into table '%1', %2 rows rejected (in all).

| Item        | Value                       |
|-------------|-----------------------------|
| SQLCode     | 1000234                     |
| Constant    | EMSG_CLBK_INSERTREJECTTOTAL |
| SQLState    | 01C34                       |
| ODBC State  | OK                          |
| Parameter 1 | table name                  |
| Parameter 2 | number of rows rejected     |

Probable cause                      This is an informational message displayed in context with other messages. During the LOAD some records were rejected.

## Error 1000234

Message text                      Record size of unloaded data: %2, does not match with record size of the load: %3. %1

| Item     | Value             |
|----------|-------------------|
| SQLCode  | -1000234          |
| Constant | EMSG_RECSIZEWRONG |
| SQLState | QDC40             |

| Item        | Value                              |
|-------------|------------------------------------|
| ODBC State  | ERROR                              |
| Parameter 1 | origin of the exception            |
| Parameter 2 | record size in the tape being read |
| Parameter 3 | record size of the LOAD command    |

Probable cause Record size of unloaded data does not match the size of the record described by the LOAD command.

## Error 1000235

Message text The total number of columns of unloaded data, %2, does not match the total number of columns in the load, %3. %1

| Item        | Value                                    |
|-------------|--|
| SQLCode     | -1000235                                 |
| Constant    | MSG_NUMCOLSWRONG                         |
| SQLState    | QDC42                                    |
| ODBC State  | ERROR                                    |
| Parameter 1 | origin of the exception                  |
| Parameter 2 | number of columns in the tape being read |
| Parameter 3 | number of columns in the LOAD command    |

Probable cause Total number of columns in the unloaded data does not match the number of columns in the LOAD command.

## Error 1000236

Message text The total number of null columns in the unloaded data, %2, does not match the total number of null columns in the LOAD command, %3. %1

| Item        | Value   |
|-------------|---|
| SQLCode     | -1000236                                      |
| Constant    | MSG_NUMNULLCOLSWRONG                          |
| SQLState    | QDC43   |
| ODBC State  | ERROR   |
| Parameter 1 | origin of the exception                       |
| Parameter 2 | number of null columns in the tape being read |

| Item        | Value                                      |
|-------------|--|
| Parameter 3 | number of null columns in the LOAD command |

Probable cause Total number of null columns in the unloaded data does not match the number of null columns in the LOAD command.

## Error 1000237

Message text The total number of variable width columns in the unloaded data, %2, does not match the total number of variable width columns in the LOAD command, %3. %1

| Item        | Value   |
|-------------|---|
| SQLCode     | -1000237  |
| Constant    | EMSG_NUMVARCOLSWRONG                                    |
| SQLState    | QDC44   |
| ODBC State  | ERROR   |
| Parameter 1 | origin of the exception                                 |
| Parameter 2 | number of variable width columns in the tape being read |
| Parameter 3 | number of variable width columns in the LOAD command    |

Probable cause Total number of variable width columns in the unloaded data does not match the number of variable width columns in the LOAD command.

## Error 1000238

Message text The platform type of the unloaded data, %2, does not match the platform type on the load, %3. %1

| Item        | Value  |
|-------------|--|
| SQLCode     | -1000238                                     |
| Constant    | EMSG_PLATIDWRONG                             |
| SQLState    | QDC45  |
| ODBC State  | ERROR  |
| Parameter 1 | location of the exception                    |
| Parameter 2 | platform ID of the tape being read           |
| Parameter 3 | platform ID the LOAD command is executing in |

**Probable cause** The Platform ID of the unloaded data does not match the Platform ID of the load. The LOAD command detected that the platform on which the UNLOAD was performed, is not the same platform on which the LOAD is being attempted. Cross platform LOAD-UNLOAD cannot be done.

## Error 1000239

**Message text** UNLOAD version number: %2, does not match the LOAD version number: %3. %1

| Item        | Value   |
|-------------|---|
| SQLCode     | -1000239                                      |
| Constant    | EMSG_VERSIONWRONG                             |
| SQLState    | QDC46   |
| ODBC State  | ERROR   |
| Parameter 1 | location of the exception                     |
| Parameter 2 | version number of data in the tape being read |
| Parameter 3 | version number of the LOAD command            |

**Probable cause** The version number of the data on the tape being read does not match the version number of the LOAD command. The version numbers must match before the data on the tape can be loaded.

## Error 1000240

**Message text** Total number of blocks of unloaded data: %2, does not match with total number of blocks loaded: %3. %1

| Item        | Value                                   |
|-------------|---|
| SQLCode     | -1000240                                |
| Constant    | EMSG_BLOCKCOUNTWRONG                    |
| SQLState    | QDC47                                   |
| ODBC State  | ERROR                                   |
| Parameter 1 | origin of the exception                 |
| Parameter 2 | number of blocks in the tape being read |
| Parameter 3 | number of blocks in the load command    |

**Probable cause** Total number of blocks in unloaded data does not match with the load.

## Warning 1000241

Message text

The insert to the table will be single threaded.

| Item       | Value                            |
|------------|----------------------------------|
| SQLCode    | 1000241                          |
| Constant   | EMSG_CLBK_INSERT_SINGLE_THREADED |
| SQLState   | QDC41                            |
| ODBC State | OK                               |

Probable cause

Not enough threads are available to do a multithreaded INSERT or LOAD. The number of users doing parallel processing has limited the number of threads available for your INSERT or LOAD. The INSERT or LOAD will proceed, but will be performed serially.

Not enough memory is available for a multithreaded load.

Fixed-width and full-width, row-delimited loads (with non-zero size and limit) will run fully multithreaded provided enough resources are available.

## Error 1000242

Message text

Total number of rows of unloaded data: %2, does not match with total number of rows in the load: %3. %1

| Item        | Value                                 |
|-------------|---------------------------------------|
| SQLCode     | -1000242                              |
| Constant    | EMSG_ROWCOUNTWRONG                    |
| SQLState    | QDC48                                 |
| ODBC State  | ERROR                                 |
| Parameter 1 | origin of the exception               |
| Parameter 2 | number of rows in the tape being read |
| Parameter 3 | number of rows in the LOAD command    |

Probable cause

Total number of rows in unloaded data does not match with the load.

## Error 1000243

Message text

Unload format number: %2, does not match with load format number: %3. %1

| Item        | Value                             |
|-------------|-----------------------------------|
| SQLCode     | -1000243                          |
| Constant    | MSG_FORMATWRONG                   |
| SQLState    | QDC49                             |
| ODBC State  | ERROR                             |
| Parameter 1 | origin of the exception           |
| Parameter 2 | format of the data being read     |
| Parameter 3 | format number of the LOAD command |

Probable cause Unload format number does not match with the load format number.

## Error 1000244

Message text The BLOCK FACTOR of unloaded data: %2 does not match the BLOCK FACTOR of the LOAD: %3. %1

| Item        | Value                                       |
|-------------|---|
| SQLCode     | -1000244                                    |
| Constant    | MSG_BLOCKFACTORWRONG                        |
| SQLState    | QDC50                                       |
| ODBC State  | ERROR                                       |
| Parameter 1 | location of the exception                   |
| Parameter 2 | Block Factor of data in the tape being read |
| Parameter 3 | Block Factor specified in the LOAD command  |

Probable cause The BLOCK FACTOR used in the LOAD command must be the same as the BLOCK FACTOR that was used in the LOAD command that unloaded the data.

## Error 1000245

Message text Tape / File already loaded. Block number %2 repeats. %1

| Item       | Value                 |
|------------|-----------------------|
| SQLCode    | -1000245              |
| Constant   | MSG_FILEALREADYLOADED |
| SQLState   | QDC51                 |
| ODBC State | ERROR                 |

| Item        | Value                                |
|-------------|--------------------------------------|
| Parameter 1 | location of the exception            |
| Parameter 2 | block number that was already loaded |

Probable cause           Block was already loaded.

## Error 1000246

Message text            The number of rows loaded: %3 does not match the number of rows unloaded:  
%2. %1

| Item        | Value  |
|-------------|--|
| SQLCode     | -1000246   |
| Constant    | EMSG_ROWCOUNTMISMATCH  |
| SQLState    | QDC52  |
| ODBC State  | ERROR  |
| Parameter 1 | origin of the exception  |
| Parameter 2 | the number of rows of data in all tapes that were read         |
| Parameter 3 | the number of rows of data actually loaded by the load command |

Probable cause           The number of rows of data on all of the tapes loaded does not match the  
number of rows of data actually unloaded by the LOAD command.

## Error 1000247

Message text            The number of blocks loaded: %3 does not match number of blocks unloaded:  
%2. %1

| Item        | Value  |
|-------------|--|
| SQLCode     | -1000247   |
| Constant    | EMSG_BLOCKCOUNTMISMATCH                                      |
| SQLState    | QDC54  |
| ODBC State  | ERROR  |
| Parameter 1 | origin of the exception                                      |
| Parameter 2 | number of blocks of data in all tapes that were read         |
| Parameter 3 | number of blocks of data actually loaded by the LOAD command |

**Probable cause** The number of blocks of data on all of the tapes that were loaded does not match the number of blocks of data that were unloaded by the UNLOAD command.

## Warning 1000258

**Message text** Portions of the insert/load will be single threaded.

| Item       | Value                             |
|------------|-----------------------------------|
| SQLCode    | 1000258                           |
| Constant   | EMSG_CLBK_INSERT_SINGLE_THREADED1 |
| SQLState   | QDC58                             |
| ODBC State | OK                                |

**Probable cause** This message can occur for any of these reasons:

- Memory for the load has been constrained by the LOAD\_MEMORY\_MB option
- A variable-length load was executed without row delimiters (even if column delimiters were specified)
- A partial-width, variable-length load was executed

The LOAD will proceed. To avoid a single-threaded LOAD, ensure that enough memory is available by setting LOAD\_MEMORY\_MB to its default value, 0.

Fixed-width and full-width, row-delimited loads (with non-zero size and limit) will run fully multithreaded provided enough resources are available.

## Error 1000260

**Message text** ALTER DBSPACE <dbspace-name> ADD <number> is not supported. %1

| Item       | Value                       |
|------------|-----------------------------|
| SQLCode    | -1000260L                   |
| Constant   | EMSG_ALTER_ADD_NOTSUPPORTED |
| SQLState   | QDC60                       |
| ODBC State | ERROR                       |

Probable cause                      You can add space to a Sybase IQ database only using the CREATE DBSPACE command. The size of existing dbspaces cannot be changed.

## Error 1000261

Message text                        A Sybase IQ system dbspace, '%2', cannot be renamed. %1

| Item        | Value                          |
|-------------|--------------------------------|
| SQLCode     | -1000261L                      |
| Constant    | EMSG_ALTER_CANT_RENAME_DBSPACE |
| SQLState    | QDC61                          |
| ODBC State  | ERROR                          |
| Parameter 1 | location of the exception      |
| Parameter 2 | dbspace name                   |

Probable cause                      You cannot rename a dbspace in a Sybase IQ database.

## Error 1000262

Message text                        You cannot specify BLANK PADDING OFF for CREATE DATABASE. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1000262L                 |
| Constant    | EMSG_BLANKPADDINGOFF      |
| SQLState    | QDC62                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |

Probable cause                      Sybase IQ does not support the BLANK PADDING OFF clause of the CREATE DATABASE statement.

## Error 1000264

Message text                        DBCC: Ambiguous index name '%2'. Please specify owner. %1

| Item     | Value                    |
|----------|--------------------------|
| SQLCode  | -1000264                 |
| Constant | EMSG_DBCC_INDEXAMBIGUOUS |

| Item        | Value                     |
|-------------|---------------------------|
| SQLState    | QDB04                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | name of ambiguous index   |

Probable cause                    The specified index name is shared by more than one owner. The owner can be specified as `owner.table.index`.

## Error 1000265

Message text                    DBCC: Index '%2' not found. %1

| Item        | Value                        |
|-------------|------------------------------|
| SQLCode     | -1000265                     |
| Constant    | MSG_DBCC_INDEX_NOTFOUND      |
| SQLState    | QDB05                        |
| ODBC State  | ERROR                        |
| Parameter 1 | location of the exception    |
| Parameter 2 | name of user specified index |

Probable cause                    DBCC was unable to locate the specified index. Either the index does not exist or the name format is incorrect. The index name must follow the format `[owner.]table.index`.

## Error 1000266

Message text                    DBCC: Table '%2' not found. %1

| Item        | Value                        |
|-------------|------------------------------|
| SQLCode     | -1000266                     |
| Constant    | MSG_DBCC_TABLE_NOTFOUND      |
| SQLState    | QDB09                        |
| ODBC State  | ERROR                        |
| Parameter 1 | location of the exception    |
| Parameter 2 | name of user specified table |

Probable cause DBCC was unable to locate the specified table. Either the table does not exist or the name format is incorrect. The table name must follow the format [owner.]table.

## Error 1000267

Message text DBCC: Cannot convert '%2' to an integer percent. %1

| Item        | Value                                     |
|-------------|---|
| SQLCode     | -1000267                                  |
| Constant    | EMSG_DBCC_RESOURCE_CONVERTERROR           |
| SQLState    | QDB07                                     |
| ODBC State  | ERROR                                     |
| Parameter 1 | location of the exception                 |
| Parameter 2 | percent specified for RESOURCES parameter |

Probable cause DBCC expects an integer value for the resources percent.

## Error 1000268

Message text DBCC: The target '%2' overlaps an earlier target. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1000268                  |
| Constant    | EMSG_DBCC_TARGETS_OVERLAP |
| SQLState    | QDB08                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | name of table or index    |

Probable cause The user cannot specify an index or table multiple times in the sp\_iqcheckdb input parameter string. This also applies to an index that is already included by specifying its table.

## Error 1000269

Message text DBCC: Multiple modes specified with a write mode. %1

| Item        | Value                      |
|-------------|----------------------------|
| SQLCode     | -1000269                   |
| Constant    | MSG_DBCC_MULTI_WRITE_MODES |
| SQLState    | QDB59                      |
| ODBC State  | ERROR                      |
| Parameter 1 | location of the exception  |

Probable cause

The user can only specify one mode as an `sp_iqcheckdb` input parameter, if a mode that updates the database is present. Update modes are the stored procedure `sp_iqcheckdb` repair mode, the server switch `iqdroplks`, and the database options `CONVERT_HG_TO_1242 = ON` and `CONVERT_VARCHAR_TO_1242 = ON`.

## Error 1000270

Message text

DBCC: FP Recreate failed for index '%2'. %1

| Item        | Value                       |
|-------------|-----------------------------|
| SQLCode     | -1000270                    |
| Constant    | MSG_DBCC_FP_RECREATE_FAILED |
| SQLState    | QDB60                       |
| ODBC State  | ERROR                       |
| Parameter 1 | location of the exception   |
| Parameter 2 | name of the index           |

Probable cause

If an FP recreate fails, the command must rollback.

## Error 1000271

Message text

DBCC: Table '%2' is a temporary table, a view, or not an IQ table. %1

| Item        | Value                        |
|-------------|------------------------------|
| SQLCode     | -1000271                     |
| Constant    | MSG_DBCC_NOT_IQ_TABLE        |
| SQLState    | QDB61                        |
| ODBC State  | ERROR                        |
| Parameter 1 | location of the exception    |
| Parameter 2 | name of user specified table |

Probable cause DBCC located the specified table, but the table was a non-IQ or temporary table. DBCC will only process tables that are in IQ Main Store.

## Error 1000272

Message text DBCC: Invalid table name '%2'. %1

| Item        | Value                        |
|-------------|------------------------------|
| SQLCode     | -1000272                     |
| Constant    | EMSG_DBCC_INVALID_TABLE_NAME |
| SQLState    | QDB63                        |
| ODBC State  | ERROR                        |
| Parameter 1 | location of the exception    |
| Parameter 2 | name of user specified table |

Probable cause The table name must follow the format [owner.]table.

## Error 1000273

Message text DBCC: Invalid index name '%2'. %1

| Item        | Value                        |
|-------------|------------------------------|
| SQLCode     | -1000273                     |
| Constant    | EMSG_DBCC_INVALID_INDEX_NAME |
| SQLState    | QDB64                        |
| ODBC State  | ERROR                        |
| Parameter 1 | location of the exception    |
| Parameter 2 | name of user specified index |

Probable cause The index name must follow the format [owner.]table.index.

## Error 1000274

Message text DBCC: Upgrade options can be used only with CHECK or REPAIR mode. %1

| Item     | Value                     |
|----------|---------------------------|
| SQLCode  | -1000274                  |
| Constant | EMSG_DBCC_UPGRADE_OPTIONS |

| Item        | Value                     |
|-------------|---------------------------|
| SQLState    | QDB65                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |

Probable cause Upgrade options (such as CONVERT\_HG\_TO\_1242) can be used only with the sp\_iqcheckdb check or repair modes. They cannot be use with sp\_iqcheckdb allocation mode.

## Error 1000275

Message text DBCC cannot process object '%2' at the current transaction level. %1

| Item        | Value                                       |
|-------------|---|
| SQLCode     | -1000275                                    |
| Constant    | EMSG_DBCC_FUTUREVERSION                     |
| SQLState    | QDB68                                       |
| ODBC State  | ERROR                                       |
| Parameter 1 | location of the exception                   |
| Parameter 2 | name of the object that cannot be processed |

Probable cause DBCC cannot open the requested object, because it was created at a transaction level that is higher than the transaction level at which DBCC is running. In order for DBCC to be able to open the object, a COMMIT must first be done.

## Error 1000276

Message text At least one mode and target must be specified to DBCC. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1000276                  |
| Constant    | EMSG_DBCC_NOTHING_TO_DO   |
| SQLState    | QDB69                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |

Probable cause DBCC has no default target or mode. You must explicitly specify both a mode and a target in the sp\_iqcheckdb parameter string.

## Error 1000277

Message text “allocation database” is the only command allowed in drop leaks mode. %1

| Item        | Value                       |
|-------------|-----------------------------|
| SQLCode     | -1000277                    |
| Constant    | EMSG_DBCC_DROPLEAKS_COMMAND |
| SQLState    | QDB70                       |
| ODBC State  | ERROR                       |
| Parameter 1 | location of the exception   |

Probable cause Modes are restricted to avoid long DBCC sessions during forced recovery.

## Error 1000278

Message text “resetclks” must be run in single-node mode with “allocation database”. %1

| Item        | Value                       |
|-------------|-----------------------------|
| SQLCode     | -1000278                    |
| Constant    | EMSG_DBCC_RESETCLKS_COMMAND |
| SQLState    | QDB71                       |
| ODBC State  | ERROR                       |
| Parameter 1 | location of the exception   |

Probable cause The resetlocks option is restricted to DBCC allocation mode and single-node mode and requires checking the entire database. Use the command `sp_iqcheckdb 'allocation database resetlocks'`.

## Error 1000279

Message text Column '%2' must be included in the insert. It is part of a multicolumn index. %1

| Item        | Value  |
|-------------|--|
| SQLCode     | -1000279L                                    |
| Constant    | EMSG_INSRT_MISSING_COLUMN_ON_INSERT          |
| SQLState    | QDB99  |
| ODBC State  | ERROR  |
| Parameter 1 | location of the exception                    |
| Parameter 2 | the name of the column missing in the insert |

Probable cause All columns of a multicolumn index must be included in an INSERT.

## Error 1000280

Message text Query node version information has not changed

| Item       | Value                    |
|------------|--------------------------|
| SQLCode    | -1000280L                |
| Constant   | EMSG_IQ_QUERY_NOTCHANGED |
| SQLState   | QDC64                    |
| ODBC State | ERROR                    |

Probable cause The multiplex status query event has run, but there is nothing for the server to do at this time.

## Error 1000281

Message text Column %2 has unsupported data type for index rebuild. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1000281L                 |
| Constant    | EMSG_FPSTYLE_UNSUPPORTED  |
| SQLState    | QDC56                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | index name                |

Probable cause You have tried to rebuild an FP index of unsupported index style.

## Error 1000282

Message text DBCC must be restricted to the MAIN or LOCAL store only. %1

| Item       | Value                 |
|------------|-----------------------|
| SQLCode    | -1000282L             |
| Constant   | EMSG_DBCC_ONEMPXSTORE |
| SQLState   | QDB72                 |
| ODBC State | ERROR                 |

| Item        | Value                     |
|-------------|---------------------------|
| Parameter 1 | location of the exception |

Probable cause DBCC is restricted to either the main or the local store only. DBCC may not combine checking of tables in both main and local stores in the same DBCC execution.

## ERROR 1001006

Message text Data exception - data type conversion is not possible. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1001006L                 |
| Constant    | EMSG_TYPECONVERSION       |
| SQLState    | QFA06                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |

Probable cause You requested SORTKEY() on data other than a string expression, or a numeric result column is bigger than MAX\_CLIENT\_NUMERIC\_PRECISION allows, and IQ is unable to cast it to the specified precision.

## Error 1001019

Message text Function not supported on varchars longer than 255 %2, %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1001019L                 |
| Constant    | EMSG_FUNCNOTSUPONLVCHAR   |
| SQLState    | QFA19                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | SA parse source code line |

Probable cause The string expression for SORTKEY() is longer than 255 bytes.

**Error 1001030**

Message text Feature, %2, is not supported. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1001030                  |
| Constant    | EMSG_NOTIMPLEMENTED_W_ARG |
| SQLState    | QFA2A                     |
| ODBC State  | ERROR                     |
| Parameter 1 | SA parse source code line |
| Parameter 2 | feature                   |

Probable cause The feature is not supported.

**Error 1001048**

Message text To display a varbinary column > 32k you must set the parameter Ase\_Binary\_Display to off. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1001048L                 |
| Constant    | EMSG_VARBIN_TOOBIG        |
| SQLState    | QFA44                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |

Probable cause You cannot convert any varbinary column greater than 32K to varchar.

**Error 1001049**

Message text Expression, “%2” changed datatypes between CURSOR DESCRIBE and CURSOR OPEN from %3. The CURSOR DESCRIBE needs to be rerun %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1001049L                 |
| Constant    | EMSG_DATATYPE_CHANGE      |
| SQLState    | QFA45                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | column number             |

| Item        | Value         |
|-------------|---------------|
| Parameter 3 | datatype info |

Probable cause Given the block size of a database and the number of blocks specified by the user for the dbspace, the dbspace size (in bytes) would exceed the operating system limit of bytes per file.

## Error 1001050

Message text This row is too wide to extract. Reduce the row width to less than %2 (iq page size) %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1001050L                 |
| Constant    | EMSG_EXTRACT_ROW_TOO_WIDE |
| SQLState    | QFA46                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | the width of this row     |

Probable cause An attempt was made to extract a row that is larger than the page size of this database.

## Error 1001051

Message text Query returns %2 data > 2GB. Use %3 %1

| Item        | Value                                 |
|-------------|---------------------------------------|
| SQLCode     | -1001051L                             |
| Constant    | EMSG_LOB_OVER_2G_W_ARG                |
| SQLState    | QFA47                                 |
| ODBC State  | ERROR                                 |
| Parameter 1 | SA parse source code line             |
| Parameter 2 | long binary or long varchar data type |
| Parameter 3 | function recommended                  |

Probable cause This error is reported when a query attempts to return a LONG BINARY or LONG VARCHAR value greater than 2 gigabytes.

## Error 1001052

Message text

Parameter %2 must be long binary/varchar type. %3 %1

| Item        | Value                       |
|-------------|-----------------------------|
| SQLCode     | -1001052L                   |
| Constant    | EMSG_ONLY_SUPPORT_LOB_W_ARG |
| SQLState    | QFA48                       |
| ODBC State  | ERROR                       |
| Parameter 1 | SA parse source code line   |
| Parameter 2 | LOB argument name           |
| Parameter 3 | recommended function name   |

Probable cause

This error is reported when an invalid data type is used for a Large Object (LOB) function parameter.

## Error 1001053

Message text

Wrong number of parameters to function %2 %1

| Item        | Value                       |
|-------------|-----------------------------|
| SQLCode     | -1001053L                   |
| Constant    | EMSG_WRONG_NUM_PARAMS_W_ARG |
| SQLState    | QFA49                       |
| ODBC State  | ERROR                       |
| Parameter 1 | SA parse source code line   |
| Parameter 2 | function name               |

Probable cause

This error is reported when a Large Object (LOB) function is passed an incorrect number of arguments.

## Error 1001054

Message text

You cannot specify long binary/varchar column in the ORDER/GROUP by clause or in an aggregate function. %1

| Item     | Value                      |
|----------|----------------------------|
| SQLCode  | -1001054L                  |
| Constant | EMSG_LOB_NOT_ALLOWED_GROUP |
| SQLState | QFA50                      |

| Item        | Value                     |
|-------------|---------------------------|
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |

Probable cause This error is reported when you attempt to use a LONG BINARY column in an ORDER BY, GROUP BY, or aggregation clause.

## Warning 1001055

Message text An error occurred loading %1 column, %2, for %3, rowid %4.

| Item        | Value                                 |
|-------------|---------------------------------------|
| SQLCode     | 1001055L                              |
| Constant    | EMSG_LOB_LOAD_ERROR_WARN              |
| SQLState    | QFA51                                 |
| ODBC State  | OK                                    |
| Parameter 1 | long binary or long varchar data type |
| Parameter 2 | FP index name                         |
| Parameter 3 | secondary file name                   |
| Parameter 4 | rowid                                 |

Probable cause This warning message is returned when an error is encountered either opening or reading a LONG BINARY or LONG VARCHAR secondary file during a load operation. This warning message is returned in the server log and the IQ message file when the SECONDARY\_FILE\_ERROR option is OFF and an error occurs.

## Warning 1001056

Message text An error occurred extracting %1 column, %2, for %3.

| Item        | Value                                 |
|-------------|---------------------------------------|
| SQLCode     | 1001056L                              |
| Constant    | EMSG_LOB_EXTRACT_ERROR_WARN           |
| SQLState    | QFA52                                 |
| ODBC State  | OK                                    |
| Parameter 1 | long binary or long varchar data type |
| Parameter 2 | FP index name                         |

| Item        | Value               |
|-------------|---------------------|
| Parameter 3 | secondary file name |

Probable cause

This warning message is returned when you attempt to extract a LONG BINARY or LONG VARCHAR column and an error is encountered during the extract operation. This warning message is returned in the server log and the IQ message file when the SECONDARY\_FILE\_ERROR option is OFF and an error occurs.

## Error 1001057

Message text

You must use BFILE() to extract %2 column. %1

| Item        | Value                                 |
|-------------|---------------------------------------|
| SQLCode     | -1001057L                             |
| Constant    | EMSG_LOB_EXTRACT_USE_BFILE            |
| SQLState    | QFA53                                 |
| ODBC State  | ERROR                                 |
| Parameter 1 | location of the exception             |
| Parameter 2 | long binary or long varchar data type |

Probable cause

This error is reported when you execute a query containing a LONG BINARY or LONG VARCHAR column with the database option TEMP\_EXTRACT\_NAME1 set ON and you did not specify the BFILE function.

## Error 1001058

Message text

The secondary file name, %2, is too long. %1

| Item        | Value                           |
|-------------|---------------------------------|
| SQLCode     | -1001058L                       |
| Constant    | EMSG_LOB_SECONDARY_FILE_TOOLONG |
| SQLState    | QFA54                           |
| ODBC State  | OK                              |
| Parameter 1 | location of the exception       |
| Parameter 2 | secondary file name             |

**Probable cause** This error is reported when the length of the LOAD TABLE secondary file pathname exceeds the pathname length limit of the operating system. The action taken when this error is reported depends on the value of the SECONDARY\_FILE\_ERROR database option.

## Error 1003000

**Message text** Datatype %2, returned by Client Library, is not valid in Sybase IQ. %1

| Item        | Value                       |
|-------------|-----------------------------|
| SQLCode     | -1003000L                   |
| Constant    | EMSG_HQM_BAD_DATATYPE       |
| SQLState    | QHA00                       |
| ODBC State  | ERROR                       |
| Parameter 1 | location of the exception   |
| Parameter 2 | name of the CTLib data type |

**Probable cause** Sybase IQ does not support some of the data types that are supported by Adaptive Server Enterprise. For example, this error is returned when you attempt to select an IMAGE or TEXT data type in an INSERT...LOCATION operation. Refer to the *Sybase IQ Reference Manual* for information on data types supported by Sybase IQ.

## Error 1003001

**Message text** Cannot convert to Sybase IQ datatype: %2 from Client Library datatype %3. %1

| Item        | Value                           |
|-------------|---------------------------------|
| SQLCode     | -1003001L                       |
| Constant    | EMSG_HQM_CANT_CONVERT           |
| SQLState    | QHA01                           |
| ODBC State  | ERROR                           |
| Parameter 1 | location of the exception       |
| Parameter 2 | name of the IQ data type        |
| Parameter 3 | name of the CtLibrary data type |

**Probable cause** Error converting CSLIB datatype to IQ datatype.

## Error 1003002

Message text

CtLibrary Error: %2, Severity: %3, Origin: %4, Layer: %5\nError Message: %6\nOS Error: %7, OS Message: %8. %1

| Item        | Value                                     |
|-------------|---|
| SQLCode     | -1003002L                                 |
| Constant    | EMSG_HQM_CTLIB_ERROR                      |
| SQLState    | QHA02                                     |
| ODBC State  | ERROR                                     |
| Parameter 1 | location of the exception                 |
| Parameter 2 | CtLib error number                        |
| Parameter 3 | CtLib severity number                     |
| Parameter 4 | CtLib origin number                       |
| Parameter 5 | CtLib layer number                        |
| Parameter 6 | CtLib error message                       |
| Parameter 7 | operating system error number (optional)  |
| Parameter 8 | operating system error message (optional) |

Probable cause

General CTLIB/CSLIB error message. Refer to CTLibrary/CSLibrary for error information.

## Error 1003003

Message text

Adaptive Server Error: %2, Severity: %3, State: %4, Line: %5\nServer Name: %7\nError Messages: %8. %1

| Item        | Value                                   |
|-------------|---|
| SQLCode     | -1003003                                |
| Constant    | EMSG_HQM_SERVER_ERROR                   |
| SQLState    | QHA03                                   |
| ODBC State  | ERROR                                   |
| Parameter 1 | origin of the exception.                |
| Parameter 2 | server error number.                    |
| Parameter 3 | server severity number                  |
| Parameter 4 | server line number                      |
| Parameter 5 | server name (optional).                 |
| Parameter 6 | server stored procedure name (optional) |
| Parameter 7 | server error message                    |

Probable cause            General SQL Server error message.

## Error 1003004

Message text            COMPUTE values cannot be used in attached database queries. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1003004L                 |
| Constant    | EMSG_HQM_NOCOMPUTES       |
| SQLState    | QHA04                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |

Probable cause            Sybase IQ does not process COMPUTE clauses.

## Error 1003005

Message text            Connectivity libraries cannot be found (check your dynamic library search path). Selects from attached databases are not possible without these libraries. %1

| Item       | Value           |
|------------|-----------------|
| SQLCode    | -1003005        |
| Constant   | EMSG_HQM_CTSTUB |
| SQLState   | QHA05           |
| ODBC State | ERROR           |

Probable cause            Cannot process attached DB request without the connectivity libraries. The dynamic search library path is specified by the environment variable LD\_LIBRARY\_PATH on UNIX platforms. On Windows platforms, the libraries must be found in the PATH.

## Error 1003006

Message text            A call to ct\_con\_props failed trying to get the msglist from the connection. %1

| Item     | Value            |
|----------|------------------|
| SQLCode  | -1003006L        |
| Constant | EMSG_HQM_GET_MSG |

| Item        | Value                     |
|-------------|---------------------------|
| SQLState    | QHA06                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |

**Probable cause** While trying to report an error condition to the user, another error occurred retrieving the original error from the connection. If this error occurs, retry the operation that caused it.

## Error 1005017

**Message text** You cannot DELETE from a join virtual table. (%2) %1

| Item        | Value                       |
|-------------|-----------------------------|
| SQLCode     | -1005017                    |
| Constant    | EMSG_CANNOT_DELETE_FROM_JVT |
| SQLState    | QTA17                       |
| ODBC State  | ERROR                       |
| Parameter 1 | location of the exception   |
| Parameter 2 | table name                  |

**Probable cause** Users can not DELETE from a join virtual table. If this message occurs, it means that the user has tried to DELETE from a join virtual table. This is not permitted.

## Error 1005024

**Message text** Estimate number: %2 exceed the DEFAULT\_MAX\_CUBE\_RESULT of GROUP BY CUBE or ROLLUP %1

| Item        | Value  |
|-------------|--|
| SQLCode     | -1005024L  |
| Constant    | EMSG_EXCEED_MAX_CUBE_RESULT                                |
| SQLState    | QTA24  |
| ODBC State  | ERROR  |
| Parameter 1 | location of the exception                                  |
| Parameter 2 | the estimated total result of the hash base cube or rollup |

**Probable cause** The actual number of rows the IQ optimizer estimated for the GROUP BY CUBE hash operation has exceeded the MAX\_CUBE\_RESULT option value. Increase the value of the MAX\_CUBE\_RESULT option and run the query again. Note that the new MAX\_CUBE\_RESULT value does not take effect until the server is restarted.

## Error 1005025

**Message text** Query rejected as too complex. After join simplifications there were still %2 tables to be joined, which exceeds the current setting of Max\_Join\_Enumeration. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1005025L                 |
| Constant    | EMSG_JOINS_TOO_COMPLEX    |
| SQLState    | QTA25                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | user name specified       |

**Probable cause** A RAISERROR statement has been executed.

## Error 1005027

**Message text** An error occurs during unistring conversion —%2. %1

| Item        | Value                       |
|-------------|-----------------------------|
| SQLCode     | -1005027L                   |
| Constant    | EMSG_UNILIB_ERR             |
| SQLState    | QTA27                       |
| ODBC State  | ERROR                       |
| Parameter 1 | location of the exception   |
| Parameter 2 | details of the unilib error |

**Probable cause** The unilib error returned in this message occurred during a unistring conversion.

**Error 1006130**

Message text                      Object not open for file %2 %1

| Item        | Value                         |
|-------------|-------------------------------|
| SQLCode     | -1006130                      |
| Constant    | EMSG_IO_OSERROR               |
| SQLState    | QBB30                         |
| ODBC State  | ERROR                         |
| Parameter 1 | origin of the exception       |
| Parameter 2 | file that could not be opened |

Probable cause                      This is an internal error. It should be reported to Sybase.

**Error 1006134**

Message text                      Invalid filename: %2. ‘::’ is not allowed in the filename for this statement. %1

| Item        | Value                               |
|-------------|-------------------------------------|
| SQLCode     | -1006134L                           |
| Constant    | EMSG_IO_INVALID_FILE                |
| SQLState    | QBB34                               |
| ODBC State  | ERROR                               |
| Parameter 1 | location of the exception           |
| Parameter 2 | file or device name that is invalid |

Probable cause                      Sybase IQ does not allow a “::” (colon colon) in the filename for the statement being executed.

**Error 1006265**

Message text                      Invalid Filename. File: %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1006265L                 |
| Constant    | EMSG_IO_INVALID_FILENAME  |
| SQLState    | QBC65                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |

Probable cause            A bad filename (perhaps of zero length) was specified.

## Error 1006266

Message text            Found bad sector on raw device: %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1006266L                 |
| Constant    | EMSG_RAWIO_BAD_SECTOR     |
| SQLState    | QBC66                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |

Probable cause            A bad sector was detected on the given raw device.

## Error 1008000

Message text            Users are not allowed to create FP index. FP indexes are created automatically when the table is created.

| Item       | Value              |
|------------|--------------------|
| SQLCode    | -1008000           |
| Constant   | EMSG_IQ_NOCREATEFP |
| SQLState   | QNA00              |
| ODBC State | ERROR              |

Probable cause            Users are not able to create Fast Projection indexes on columns. They are created automatically when the table is created.

## Error 1008001

Message text            The user cannot create indexes on a join virtual table.

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -1008001                  |
| Constant   | EMSG_SQL_NOCREATEINDEXJVT |
| SQLState   | QNA01                     |
| ODBC State | ERROR                     |

Probable cause Users cannot create indexes on a join virtual table. They are automatically created.

## Error 1008002

Message text There is a join index using table '%1'. The table cannot be dropped until the join index is dropped or altered.

| Item       | Value                   |
|------------|-------------------------|
| SQLCode    | -1008002                |
| Constant   | EMSG_IQ_NODROPTABWITHJI |
| SQLState   | QNA02                   |
| ODBC State | ERROR                   |

Probable cause There is at least one join index using this table in a join relationship. The table cannot be dropped until the join index is dropped or it is altered such that it no longer uses this table.

## Error 1008003

Message text Cannot drop join virtual table '%1'.

| Item       | Value             |
|------------|-------------------|
| SQLCode    | -1008003          |
| Constant   | EMSG_IQ_NODROPJVT |
| SQLState   | QNA03             |
| ODBC State | ERROR             |

Probable cause The user is not allowed to drop a join virtual table. It can only be dropped by dropping the join index.

## Error 1008004

Message text Cannot DROP index '%1'.

| Item     | Value                 |
|----------|-----------------------|
| SQLCode  | -1008004              |
| Constant | EMSG_IQ_NODROPIQINDEX |
| SQLState | QNA04                 |

| Item        | Value  |
|-------------|--|
| ODBC State  | ERROR  |
| Parameter 1 | name of the index the user is attempting to DROP |

Probable cause Users cannot drop internally created indexes except by dropping that table or join indexes or alter dropping the table or join index.

## Error 1008005

Message text Cannot ALTER join virtual table '%1'.

| Item       | Value              |
|------------|--------------------|
| SQLCode    | -1008005           |
| Constant   | EMSG_IQ_NOALTERJVT |
| SQLState   | QNA05              |
| ODBC State | ERROR              |

Probable cause The user cannot ALTER a join virtual table.

## Error 1008006

Message text You cannot specify a DEFAULT value for a column.

| Item       | Value                  |
|------------|------------------------|
| SQLCode    | -1008006               |
| Constant   | EMSG_IQ_INVALIDDEFAULT |
| SQLState   | QNA06                  |
| ODBC State | ERROR                  |

Probable cause The user cannot specify a DEFAULT value for a column during the CREATE TABLE or ALTER TABLE ADD COLUMN functions.

## Error 1008007

Message text The ALTER TABLE option '%2' is not supported by Sybase IQ. %1

| Item    | Value     |
|---------|-----------|
| SQLCode | -1008007L |

| Item        | Value  |
|-------------|--|
| Constant    | EMSG_IQ_NOSUPPORT                                    |
| SQLState    | QNA07  |
| ODBC State  | ERROR  |
| Parameter 1 | location of the exception                            |
| Parameter 2 | the ALTER TABLE option the user is attempting to use |

Probable cause The user entered an option that is not supported by Sybase IQ, but is supported by Adaptive Server Anywhere (for example, REPLICATION ON).

## Error 1008008

Message text You cannot TRUNCATE a join virtual table.

| Item       | Value                 |
|------------|-----------------------|
| SQLCode    | -1008008              |
| Constant   | EMSG_IQ_NOTRUNCATEJVT |
| SQLState   | QNA08                 |
| ODBC State | ERROR                 |

Probable cause The user is not allowed to TRUNCATE a join virtual table.

## Error 1008009

Message text This statement is not supported by Sybase IQ.

| Item       | Value                    |
|------------|--------------------------|
| SQLCode    | -1008009L                |
| Constant   | EMSG_IQ_STMTNOTSUPPORTED |
| SQLState   | QNA09                    |
| ODBC State | ERROR                    |

Probable cause This statement is supported by Adaptive Server Anywhere but not by Sybase IQ.

## Error 1008010

Message text

A request was made to delete the primary key constraint, but the primary key cannot be found.

| Item       | Value                |
|------------|----------------------|
| SQLCode    | -1008010             |
| Constant   | EMSG_IQ_NOPRIMARYKEY |
| SQLState   | QNA10                |
| ODBC State | ERROR                |

Probable cause

The user wanted to delete the primary key constraint on the table but the primary key could not be found.

## Error 1008012

Message text

This single column unique index/constraint must be ENFORCED.

| Item       | Value                |
|------------|----------------------|
| SQLCode    | -1008012             |
| Constant   | EMSG_IQ_NEEDENFORCED |
| SQLState   | QNA12                |
| ODBC State | ERROR                |

Probable cause

This single column unique index/constraint must be ENFORCED (The UNENFORCED keyword not allowed for this index/constraint).

## Error 1008013

Message text

This multicolumn unique index/constraint must be UNENFORCED

| Item       | Value                  |
|------------|------------------------|
| SQLCode    | -1008013               |
| Constant   | EMSG_IQ_NEEDUNENFORCED |
| SQLState   | QNA13                  |
| ODBC State | ERROR                  |

Probable cause

This multicolumn unique index/constraint must be unenforced (The UNENFORCED keyword is required for this index/constraint).

## Error 1008014

Message text

This foreign key must be UNENFORCED

| Item       | Value              |
|------------|--------------------|
| SQLCode    | -1008014           |
| Constant   | EMSG_IQ_FKEYNOSUPP |
| SQLState   | QNA14              |
| ODBC State | ERROR              |

Probable cause

This foreign key must be UNENFORCED (The UNENFORCED keyword is required for this foreign key).

## Error 1008015

Message text

This check constraint must be ENFORCED

| Item       | Value                |
|------------|----------------------|
| SQLCode    | -1008015L            |
| Constant   | EMSG_IQ_CHCKENFORCED |
| SQLState   | QNA15                |
| ODBC State | ERROR                |

Probable cause

This CHECK constraint must be defined using the ENFORCED keyword, as Sybase IQ does not support the UNENFORCED keyword.

## Error 1008016

Message text

Cannot ALTER DELETE a column that has a unique or primary key constraint.

| Item       | Value                   |
|------------|-------------------------|
| SQLCode    | -1008016                |
| Constant   | EMSG_IQ_CONSTRAINTONCOL |
| SQLState   | QNA16                   |
| ODBC State | ERROR                   |

Probable cause

You cannot ALTER DELETE a column that has a unique or primary key constraint on it. This is a duplicate of an SA error code.

## Error 1008017

Message text

Cannot ALTER DELETE a column that has a multicolumn index.

| Item       | Value                   |
|------------|-------------------------|
| SQLCode    | -1008017                |
| Constant   | EMSG_IQ_MULTICOLONINDEX |
| SQLState   | QNA17                   |
| ODBC State | ERROR                   |

Probable cause

You cannot ALTER DELETE a column that has a multicolumn index. This is a duplicate of an SA error code.

## Error 1008018

Message text

Command prohibited on an active multiplex server.

| Item       | Value              |
|------------|--------------------|
| SQLCode    | -1008018           |
| Constant   | EMSG_IQMPX_NORODDL |
| SQLState   | QNA18              |
| ODBC State | ERROR              |

Probable cause

In a multiplex, only the write (or consolidation) server is allowed to write to, or do DDL in, the globally accessible store. Reader (or query) servers may only write to their local temporary store.

## Error 1008019

Message text

Multiplex is currently inactive.

| Item       | Value               |
|------------|---------------------|
| SQLCode    | -1008019            |
| Constant   | EMSG_IQMPX_INACTIVE |
| SQLState   | QNA19               |
| ODBC State | ERROR               |

Probable cause

The user has either requested a multiplex function or has asked for multiplex status.

## Error 1008020

Message text Multiplex command or request is unimplemented.

| Item       | Value              |
|------------|--------------------|
| SQLCode    | -1008020           |
| Constant   | EMSG_IQMPX_NOTIMPL |
| SQLState   | QNA20              |
| ODBC State | ERROR              |

Probable cause The user has requested an unimplemented multiplex feature, typically a status request that does not exist.

## Error 1008021

Message text The SYSIQFILE table is not configured for this server to run in a multiplex.

| Item       | Value                |
|------------|----------------------|
| SQLCode    | -1008021             |
| Constant   | EMSG_IQMPX_BADCONFIG |
| SQLState   | QNA21                |
| ODBC State | ERROR                |

Probable cause SYSIQFILE identifies all files which make up the given stores that the IQ server requires (main, temp, and message). For multiplex, each entry in SYSIQFILE must be associated with a particular multiplex server before that server can access the particular file. This message indicates that some of these rows are missing for the active server.

## Error 1008022

Message text Cannot find a license for multiplex.

| Item       | Value                |
|------------|----------------------|
| SQLCode    | -1008022             |
| Constant   | EMSG_IQMPX_NOLICENSE |
| SQLState   | QNA22                |
| ODBC State | ERROR                |

Probable cause The user must have a valid license in order to run a multiplex server.

## Error 1008023

Message text

Cannot start multiplex query server on a simplex database.

| Item       | Value            |
|------------|------------------|
| SQLCode    | -1008023         |
| Constant   | EMSG_IQMPX_SPXDB |
| SQLState   | QNA23            |
| ODBC State | ERROR            |

Probable cause

The database must be a multiplex database in order to run a multiplex query server.

## Error 1008024

Message text

Cannot start multiplex write server while another one is running; if the write server did not shutdown correctly, you must restart with the override switch.

| Item       | Value                 |
|------------|-----------------------|
| SQLCode    | -1008024              |
| Constant   | EMSG_IQMPX_TWOWRITERS |
| SQLState   | QNA24                 |
| ODBC State | ERROR                 |

Probable cause

Only one write server can run against a multiplex database at a time. Start the writer with an override, if the previous writer server terminated abnormally.

## Error 1008025

Message text

Cannot run multiplex query server while the write server is running simplex.

| Item       | Value              |
|------------|--------------------|
| SQLCode    | -1008025           |
| Constant   | EMSG_IQMPX_SPXONLY |
| SQLState   | QNA25              |
| ODBC State | ERROR              |

Probable cause

The write server must be either in multiplex mode or stopped, while one or more query servers are running.

**Error 1008026**

Message text

Multiplex query server out of synchronization with write server.

| Item       | Value              |
|------------|--------------------|
| SQLCode    | -1008026           |
| Constant   | EMSG_IQMPX_CATSYNC |
| SQLState   | QNA26              |
| ODBC State | ERROR              |

Probable cause

The query server's IQ catalog is older than the write server's IQ catalog. The query server must be synchronized.

**Error 1008027**

Message text

DBSPACES have been added or dropped in simplex without updating multiplex.

| Item       | Value               |
|------------|---------------------|
| SQLCode    | -1008027            |
| Constant   | EMSG_IQMPX_SEGCOUNT |
| SQLState   | QNA28               |
| ODBC State | ERROR               |

Probable cause

The user has added or removed a main dbspace in simplex and not updated the configuration of the multiplex nodes. See “SYSIQFILE system table” and “IQ\_MPX\_INFO system table” in Chapter 9, “System Procedures” of the *Sybase IQ Reference Manual* for details.**Error 1008029**

Message text

Cannot create foreign key to an unenforced primary key or unenforced unique constraint.

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -1008029                  |
| Constant   | EMSG_NOFKEY_TO_UNENFORCED |
| SQLState   | QNA29                     |
| ODBC State | ERROR                     |

**Probable cause** You need to drop the unenforced primary key or unique constraint first. Next, add the primary key or unique constraint via the ALTER TABLE statement. Execute a second ALTER TABLE statement to add the foreign key constraint again.

## Error 1008030

**Message text** Only IQ index types can be created on IQ tables within a Parallel IQ block.

| Item       | Value                  |
|------------|------------------------|
| SQLCode    | -1008030               |
| Constant   | EMSG_SQL_PLBEGINONLYCI |
| SQLState   | QNA30                  |
| ODBC State | ERROR                  |

**Probable cause** The BEGIN PARALLEL IQ...END PARALLEL IQ statement allows users to group multiple CREATE INDEX statements for execution at the same time. Only CREATE INDEX statements for HighGroup, HighNonGroup, LowFast, LowDisk, CMP, DATE, TIME, and WD index types on IQ tables are allowed within the BEGIN PARALLEL IQ...END PARALLEL IQ statement.

## Error 1008031

**Message text** Cannot do Create Index commands on global or local temporary tables or catalog server tables in a Parallel IQ block.

| Item       | Value                |
|------------|----------------------|
| SQLCode    | -1008031             |
| Constant   | EMSG_SQL_NOTEMPINPLB |
| SQLState   | QNA31                |
| ODBC State | ERROR                |

**Probable cause** You cannot use CREATE INDEX commands on global or local temporary tables within a BEGIN PARALLEL IQ...END PARALLEL IQ statement.

## Error 1009005

**Message text** Cannot create an HNG index on a column having a floating point datatype. %1

| Item        | Value                    |
|-------------|--------------------------|
| SQLCode     | -1009005                 |
| Constant    | MSG_ERROR_HNG_NOTALLOWED |
| SQLState    | QSA05                    |
| ODBC State  | ERROR                    |
| Parameter 1 | origin of the exception  |

Probable cause

A HNG index cannot be created on inexact floating point datatypes (e.g., FLOAT or DOUBLE)

## Error 1009012

Message text

Cannot create %2 index on a column having a datatype %3. %1

| Item        | Value                                       |
|-------------|---|
| SQLCode     | -1009012L                                   |
| Constant    | MSG_ERROR_INDEX_NOTALLOWED                  |
| SQLState    | QSA12                                       |
| ODBC State  | ERROR                                       |
| Parameter 1 | location of the exception                   |
| Parameter 2 | the index type (for example, LF, HG)        |
| Parameter 3 | textual name of the data type of the column |

Probable cause

The specified index type cannot be created on a column of this data type.

## Error 1009028

Message text

Cannot create a WD index with more than 256 separators. %1

| Item        | Value                            |
|-------------|----------------------------------|
| SQLCode     | -1009028                         |
| Constant    | MSG_ERROR_WD_NOTALLOWED_NS2LARGE |
| SQLState    | QSA28                            |
| ODBC State  | ERROR                            |
| Parameter 1 | location of the exception        |

Probable cause

A delimiter string in a WD index can be up to 256 characters in length, but you cannot create a WD index with more than 256 delimiters.

## Error 1009094

Message text

Cannot use raw partition for MESSAGE LOG or ROW LOG. %1

| Item        | Value                      |
|-------------|----------------------------|
| SQLCode     | -1009094                   |
| Constant    | EMSG_SVIOLATION_LOG_ON_RAW |
| SQLState    | QSA94                      |
| ODBC State  | ERROR                      |
| Parameter 1 | location of the exception  |

Probable cause

The MESSAGE LOG and ROW LOG files for load integrity constraint handling must be regular files. They cannot be raw partitions.

## Error 1009095

Message text

MESSAGE LOG and ROW LOG cannot be the same on-disk file. %1

| Item        | Value                         |
|-------------|-------------------------------|
| SQLCode     | -1009095                      |
| Constant    | EMSG_SVIOLATION_LOGS_SAMEFILE |
| SQLState    | QSA95                         |
| ODBC State  | ERROR                         |
| Parameter 1 | location of the exception     |

Probable cause

The MESSAGE LOG and ROW LOG files cannot be the same disk file.

## Error 1009096

Message text

%3 integrity constraint limit (%2) exceeded. %1

| Item        | Value  |
|-------------|--|
| SQLCode     | -1009096   |
| Constant    | EMSG_SVIOLATION_IGNORE_LIMIT_EXCEEDED                        |
| SQLState    | QSA96  |
| ODBC State  | ERROR  |
| Parameter 1 | location of the exception                                    |
| Parameter 2 | user specified integrity constraint limit                    |
| Parameter 3 | type of integrity constraint violation specified by the user |

Probable cause The number of integrity constraint violations for the given type has been exceeded during the LOAD. The LOAD will rollback.

## Error 100907

Message text Cumulative total (%2) for all integrity constraint violations exceeded. %1

| Item        | Value   |
|-------------|---|
| SQLCode     | -100907   |
| Constant    | EMSG_SVIOLATION_ALL_LIMIT_EXCEEDED                |
| SQLState    | QSA97   |
| ODBC State  | ERROR   |
| Parameter 1 | location of the exception                         |
| Parameter 2 | maximum number of constraint violations to ignore |

Probable cause The total number of NULL, UNIQUE, DATA VALUE, FOREIGN KEY, and CHECK integrity constraint violations has exceeded the user specified limit.

## Error 100908

Message text Invalid MESSAGE LOG or ROW LOG filename. %1

| Item        | Value                        |
|-------------|------------------------------|
| SQLCode     | -100908                      |
| Constant    | EMSG_SVIOLATION_INVALID_NAME |
| SQLState    | QSA98                        |
| ODBC State  | ERROR                        |
| Parameter 1 | location of the exception    |

Probable cause A bad filename (perhaps zero-length) was specified for either the MESSAGE LOG or ROW LOG file on the LOAD TABLE statement.

## Error 1009100

Message text Database segment '%2' is not valid. It is of type '%3'. Type BTYPE\_DBEXT was expected. This segment cannot be used. %1

| Item        | Value                       |
|-------------|-----------------------------|
| SQLCode     | -1009100L                   |
| Constant    | EMSG_SDBEXT_BAD_BTTYPE      |
| SQLState    | QSB00                       |
| ODBC State  | ERROR                       |
| Parameter 1 | location of the exception   |
| Parameter 2 | name of the segment         |
| Parameter 3 | internal segment type found |

Probable cause

The segment type written to the segment header was found not to be of the expected type. You must restore your database from backup.

## Error 1009101

Message text

Database segment '%2' is not valid. PhysicalNBlocks Found: %3  
PhysicalNBlocks expected: 1. This segment cannot be used. %1

| Item        | Value                           |
|-------------|---------------------------------|
| SQLCode     | -1009101L                       |
| Constant    | EMSG_SDBEXT_BAD_NUMPHYSBLOCKS   |
| SQLState    | QSB01                           |
| ODBC State  | ERROR                           |
| Parameter 1 | location of the exception       |
| Parameter 2 | name of the segment             |
| Parameter 3 | number of Physical Blocks found |

Probable cause

The number of physical blocks read from the segment header is incorrect. You must restore your database from backup.

## Error 1009106

Message text

Database segment '%2' is not valid. The catalog file id is incorrect. FileID found: %3 FileID expected: %4. This segment cannot be used. %1

| Item     | Value                     |
|----------|---------------------------|
| SQLCode  | -1009106L                 |
| Constant | EMSG_SDBEXT_BAD_CATFILEID |
| SQLState | QSB06                     |

| Item        | Value   |
|-------------|---|
| ODBC State  | ERROR   |
| Parameter 1 | location of the exception                               |
| Parameter 2 | segment name  |
| Parameter 3 | file ID found on the disk segment header                |
| Parameter 4 | file ID expected to be found on the disk segment header |

Probable cause

The FileID information stored on the disk segment header is not correct. The disk segment cannot be used. You must restore your database from backup.

## Error 1009108

Message text

Database segment '%2' is not valid. Startblock found in the header: %3  
Startblock expected: %4. This segment cannot be used. %1

| Item        | Value                                   |
|-------------|---|
| SQLCode     | -1009108L                               |
| Constant    | EMSG_SDBEXT_BAD_STARTBLOCK              |
| SQLState    | QSB08                                   |
| ODBC State  | ERROR                                   |
| Parameter 1 | location of the exception               |
| Parameter 2 | name of the segment                     |
| Parameter 3 | starting block found in the disk header |
| Parameter 4 | starting block expected                 |

Probable cause

The start block of the disk segment that was found in the disk segment header is not the same as what was expected. The disk segment cannot be used. You must restore your database from backup.

## Error 1009115

Message text

Database segment '%2' is not valid. %3 imaginary freelist blocks were found, but %4 imaginary freelist blocks were expected. This segment cannot be used. %1

| Item     | Value                    |
|----------|--------------------------|
| SQLCode  | -1009115L                |
| Constant | EMSG_SDBEXT_DIF_NIBLOCKS |
| SQLState | QSB15                    |

| Item        | Value   |
|-------------|---|
| ODBC State  | ERROR   |
| Parameter 1 | location of the exception   |
| Parameter 2 | name of the segment   |
| Parameter 3 | number of imaginary freelist blocks recorded in the segment header        |
| Parameter 4 | number of freelist blocks that were expected to be recorded in the header |

Probable cause

When a database segment is opened, the segment header is read and the number of freelist blocks read from the header is compared with the number of freelist blocks that are expected to be read from the segment header. If the numbers do not match, the segment cannot be used and the database must be restored from backup.

## Error 1009118

Message text

Database segment '%2' is not valid. %3 freelist blocks were found, but %4 freelist blocks were expected. This segment cannot be used. %1

| Item        | Value   |
|-------------|---|
| SQLCode     | -1009118L   |
| Constant    | EMSG_SDBEXT_DIF_NFLBLOCKS   |
| SQLState    | QSB18   |
| ODBC State  | ERROR   |
| Parameter 1 | location of the exception   |
| Parameter 2 | name of the segment   |
| Parameter 3 | number of freelist blocks recorded in the segment header                  |
| Parameter 4 | number of freelist blocks that were expected to be recorded in the header |

Probable cause

When a database segment is opened, the segment header is read and the number of freelist blocks read from the header is compared with the number of freelist blocks that are expected to be read from the segment header. If the numbers do not match, the segment cannot be used and the database must be restored from backup.

## Warning 1009131

**Message text** You have run out of '%1' dbspace in database '%2'. In another session, please issue a CREATE DBSPACE ... '%3' command and add a dbspace of at least '%4' MB.

| Item        | Value                                      |
|-------------|--|
| SQLCode     | 1009131                                    |
| Constant    | EMSG_IQSTORE_OUTOFDISK_HEADER              |
| SQLState    | QSB31                                      |
| ODBC State  | 200152                                     |
| Parameter 1 | IQ STORE or IQ TEMPORARY STORE             |
| Parameter 2 | name of the database that needs more space |
| Parameter 3 | IQ STORE or IQ TEMPORARY STORE             |
| Parameter 4 | minimum number of megabytes to add         |

**Probable cause** You created the database with insufficient space.

## Error 1009133

**Message text** You have run out of space during the CHECKPOINT operation %1

| Item       | Value                              |
|------------|------------------------------------|
| SQLCode    | -1009133                           |
| Constant   | EMSG_IQSTORE_OUTOFSPACE_CHECKPOINT |
| SQLState   | QSB33                              |
| ODBC State | ERROR                              |

**Probable cause** The checkpoint operation in progress needs to allocate blocks so that it can construct and save required checkpoint information. When space is exhausted during a checkpoint operation, it is not possible to add more space via a CREATE DATABASE command. Consequently, the checkpoint operation must fail.

## Error 1009135

**Message text** Cannot perform requested command as there is a CREATE DBSPACE command in progress. %1

| Item       | Value                        |
|------------|------------------------------|
| SQLCode    | -1009135                     |
| Constant   | EMSG_IQSTORE_INCREATEDBSPACE |
| SQLState   | QSB36                        |
| ODBC State | ERROR                        |

Probable cause

A CREATE DBSPACE or a DROP DBSPACE command was issued when there was already a DROP DBSPACE command in progress.

## Error 1009136

Message text

Cannot perform requested command as there is a DROP DBSPACE command in progress. %1

| Item       | Value                      |
|------------|----------------------------|
| SQLCode    | -1009136                   |
| Constant   | EMSG_IQSTORE_INDROPDBSPACE |
| SQLState   | QSB37                      |
| ODBC State | ERROR                      |

Probable cause

A CREATE DBSPACE or a DROP DBSPACE command was issued when there was already a DROP DBSPACE command in progress.

## Error 1009137

Message text

Cannot perform DDL command now on table %2 as a DDL command is already in progress on that table. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1009137                  |
| Constant    | EMSG_DDLINPROGRESS        |
| SQLState    | QDC55                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | name of the table         |

Probable cause

There is already a DDL command in progress on the table specified. You must wait until the current DDL command is finished before starting another DDL command on the table.

**Error 1009138**

Message text Join index '%2' is in use. %1

| Item       | Value                   |
|------------|-------------------------|
| SQLCode    | -1009138                |
| Constant   | EMSG_SQL_JOININDEXINUSE |
| SQLState   | QCA48                   |
| ODBC State | ERROR                   |

Probable cause You cannot drop a join index that is currently in use.

**Error 1009139**

Message text Cannot perform requested command as there is a CHECKPOINT command in progress. %1

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -1009139                  |
| Constant   | EMSG_IQSTORE_INCHECKPOINT |
| SQLState   | QSB38                     |
| ODBC State | ERROR                     |

Probable cause A CREATE DATABASE or a DROP DBSPACE command was issued when there was already a CHECKPOINT command in progress.

**Error 1009140**

Message text Cannot restore dbspace '%2' to raw partition '%3' because its size is smaller than the size of the original raw partition (%4 vs. %5 blocks). %1

| Item        | Value   |
|-------------|---|
| SQLCode     | -1009140L   |
| Constant    | EMSG_RESTORE_RAW_PARTITION_SIZE_MISMATCH                |
| SQLState    | QCA49   |
| ODBC State  | ERROR   |
| Parameter 1 | location of the exception                               |
| Parameter 2 | name of the IQ dbspace being restored                   |
| Parameter 3 | raw partition to which the IQ dbspace is being restored |
| Parameter 4 | size of the new raw partition                           |

| Item        | Value                         |
|-------------|-------------------------------|
| Parameter 5 | size of the old raw partition |

Probable cause You are attempting to restore an IQ dbspace on a raw partition that is smaller than the original raw partition on which the IQ dbspace existed at the time of the backup. Increase the size of the raw partition and then retry the restore operation. Sybase recommends restoring to a raw partition that is at least 10MB larger than the original raw partition.

## Error 1009141

Message text Table %2 cannot be found in the IQ store. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1009141                  |
| Constant    | EMSG_SQL_IQTABLENOTFOUND  |
| SQLState    | QCA51                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | table name                |

Probable cause The stored procedure sp\_iqtablesizer cannot find the table. This stored procedure is for IQ tables only and cannot be run against system tables or Adaptive Server Anywhere tables.

## Warning 1009142

Message text %1 SortMerge0: %2 records, PhaseI=%3 Secs, %4 runs total, %5 pgs=%6 M, runlen=%7, %8 est. phases

| Item        | Value                             |
|-------------|-----------------------------------|
| SQLCode     | 1009142                           |
| Constant    | EMSG_SORT_INFOMERGED0             |
| SQLState    | QSB39                             |
| ODBC State  | OK                                |
| Parameter 1 | what is being sorted              |
| Parameter 2 | how many records are being sorted |
| Parameter 3 | time taken in Phase I             |
| Parameter 4 | how many runs to be merged        |

| Item        | Value  |
|-------------|--|
| Parameter 5 | how many pages of data to be sorted          |
| Parameter 6 | how many megabytes (MB) of data to be sorted |
| Parameter 7 | average number of pages in a run             |
| Parameter 8 | estimated number of merge phases             |

**Probable cause** This information is provided after the Phase I radix sorting is complete and the Phase II merge-sorting is about to begin. Each run consists of a sequence of pages that have been radix sorted in Phase I. These runs are merged together in Phase II to finish the sort.

## Warning 1009143

**Message text** %1 SortMergePass: Merged %2 runs, %3 Secs, %4 runs remaining, %5 reads=%6 M, runlen=%7, phase %8, %9 M on disk

| Item        | Value  |
|-------------|--|
| SQLCode     | 1009143  |
| Constant    | EMSG_SORT_INFOMERGED1  |
| SQLState    | QSB40  |
| ODBC State  | OK   |
| Parameter 1 | what is being sorted   |
| Parameter 2 | how many runs were merged in this merge pass                 |
| Parameter 3 | time taken in this merge pass                                |
| Parameter 4 | how many runs still to be merged                             |
| Parameter 5 | how many page reads done in this pass                        |
| Parameter 6 | how many megabytes (MB) of data read in this pass            |
| Parameter 7 | average length of runs in pages for this pass                |
| Parameter 8 | fractional phase number reached                              |
| Parameter 9 | how many megabytes (MB) of data physically read in this pass |

**Probable cause** This information is provided after each merge pass. One merge pass merges a certain number of runs, using one pinned buffer page per run, plus one pinned buffer for the output run. Note that there can be several passes in a merge phase. One merge phase reads all the sort data and produces a new set of runs that provide input to the next phase.

## Warning 1009144

Message text

%1 SortMergeDone: Ave mem %2 M, %3 Secs, %4 passes, %5 reads, %6 M data=%7 pgs, %8 phases, %9 M on disk

| Item        | Value   |
|-------------|---|
| SQLCode     | 1009144   |
| Constant    | EMSG_SORT_INFOMERGED2   |
| SQLState    | QSB41   |
| ODBC State  | OK  |
| Parameter 1 | what is being sorted  |
| Parameter 2 | time-average number of pinned page buffers used by Phase II of the sort |
| Parameter 3 | time taken for Phase II of the sort                                     |
| Parameter 4 | total number of passes in Phase II                                      |
| Parameter 5 | total number of page reads in Phase II                                  |
| Parameter 6 | total megabytes (MB) of data sorted                                     |
| Parameter 7 | total number of pages of data sorted                                    |
| Parameter 8 | number of merge phases in the merge sort of Phase II                    |
| Parameter 9 | total megabytes (MB) of physical reads in Phase II                      |

Probable cause

This information is provided at the end of Phase II to summarize the resource usage of the whole merge sort. The last pass of the sort is separately reported in an EMSG\_SORT\_INFOMERGED1 message.

## Error 1009146

Message text

Cannot perform requested command as there is a DBCC command in progress.  
%1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1009146                  |
| Constant    | EMSG_IQSTORE_INDBCC       |
| SQLState    | QSB42                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |

Probable cause

A CHECKPOINT command was issued when there was already a DBCC command in progress.

## Error 1009148

Message text

Cannot use -iqfrec or -iqdroplks to start a multiplex query server with no local store. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1009148L                 |
| Constant    | EMSG_IQSTORE_NOFREC       |
| SQLState    | QSB44                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |

Probable cause

An sp\_iqcheckdb procedure call was issued on an IQ multiplex query server, or the query server was started in drop leaks or forced recovery mode. These operations are allowed only on a write server.

## Error 1009149

Message text

%2 Internal Inconsistency: %1 (%3, %4, %5)

| Item        | Value                        |
|-------------|------------------------------|
| SQLCode     | -1009149                     |
| Constant    | EMSG_INDEXCONTAINER_CORRUPT  |
| SQLState    | QSB45                        |
| ODBC State  | ERROR                        |
| Parameter 1 | location of the exception    |
| Parameter 2 | container type               |
| Parameter 3 | internal error code          |
| Parameter 4 | internal error information 1 |
| Parameter 5 | internal error information 2 |

Probable cause

An inconsistent index container was found. DBCC cannot repair the container. The database object using the container must be recreated.

## Error 1009150

Message text

Cannot delete/truncate CK %2 because of RI violation — FK has non-nulls. %1

| Item        | Value                       |
|-------------|-----------------------------|
| SQLCode     | -1009150                    |
| Constant    | EMSG_RI_VIOLATION_FKNOTNULL |
| SQLState    | QSB46                       |
| ODBC State  | ERROR                       |
| Parameter 1 | location of the exception   |
| Parameter 2 | index name of candidate key |

Probable cause

A row in one or more associated foreign table(s) contains a non-null FK value. You cannot truncate or delete all from a candidate table if any associated foreign key exists having any all non-null data.

## Error 1009151

Message text

Cannot %2 CK %3 row %4 because of RI violation. %1

| Item        | Value                                      |
|-------------|--|
| SQLCode     | -1009151                                   |
| Constant    | EMSG_RI_VIOLATION_CK                       |
| SQLState    | QSB47                                      |
| ODBC State  | ERROR                                      |
| Parameter 1 | location of exception                      |
| Parameter 2 | operation: update or delete                |
| Parameter 3 | index name for candidate key               |
| Parameter 4 | row ID that violated referential integrity |

Probable cause

An associated foreign key exists with the same candidate key value.

## Error 1009152

Message text

Cannot %2 FK %3 row %4 because of RI violation. %1

| Item        | Value                 |
|-------------|-----------------------|
| SQLCode     | -1009152              |
| Constant    | EMSG_RI_VIOLATION_FK  |
| SQLState    | QSB48                 |
| ODBC State  | ERROR                 |
| Parameter 1 | location of exception |

| Item        | Value                                      |
|-------------|--|
| Parameter 2 | operation: update or insert/load           |
| Parameter 3 | role name for foreign key                  |
| Parameter 4 | row ID that violated referential integrity |

**Probable cause** You must load the same value(s) into associated candidate key(s) before you can update/load/insert a foreign key or run ALTER TABLE ADD FOREIGN KEY.

## Error 1009153

**Message text** Cannot remove row %3 from CK %2 during LOAD cleanup because of RI violation. %1

| Item        | Value                         |
|-------------|-------------------------------|
| SQLCode     | -1009153                      |
| Constant    | EMSG_RI_VIOLATION_LOADCLEANUP |
| SQLState    | QSB49                         |
| ODBC State  | ERROR                         |
| Parameter 1 | location of the exception     |
| Parameter 2 | index name for CK             |
| Parameter 3 | row ID that violated RI       |

**Probable cause** The LOAD cleanup operation tried to remove a candidate key with self-referential integrity and the removed value exists in its associated foreign key, so the load was rolled back. Check the message log and row log, fix input rows that violate the integrity constraint, and reload.

## Error 1009412

**Message text** The INSERT ... LOCATION statement must use a SELECT statement. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1009412                  |
| Constant    | EMSG_SQL_INS_LOC_SEL      |
| SQLState    | QCB10                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |

Probable cause            The INSERT...LOCATION statement must use a SELECT statement. No other SQL statement is supported here.

## Error 1010000

Message text            The dbspace file '%2' already exists. %1

| Item        | Value                           |
|-------------|---------------------------------|
| SQLCode     | -1010000                        |
| Constant    | EMSG_DATABASE_FILEALREADYEXISTS |
| SQLState    | QXA00                           |
| ODBC State  | ERROR                           |
| Parameter 1 | origin of the exception         |
| Parameter 2 | dbspace name                    |

Probable cause            The named dbspace already exists (and it is a raw partition.) To proceed, you must first remove it by hand.

## Error 1010001

Message text            Cannot use raw partition for dbspace file '%2'. %1

| Item        | Value                   |
|-------------|-------------------------|
| SQLCode     | -1010001                |
| Constant    | EMSG_DATABASE_FILEISRAW |
| SQLState    | QXA01                   |
| ODBC State  | ERROR                   |
| Parameter 1 | origin of the exception |
| Parameter 2 | dbspace name            |

Probable cause            This dbspace cannot exist on a raw partition.

## Error 1010002

Message text            File format mismatch; database %2; Sybase IQ: %3. %1

| Item    | Value     |
|---------|-----------|
| SQLCode | -1010002L |

| Item        | Value   |
|-------------|---|
| Constant    | EMSG_DATABASE_FILEFORMAT                      |
| SQLState    | QXA02   |
| ODBC State  | ERROR   |
| Parameter 1 | location of the exception                     |
| Parameter 2 | file format of database as found in SYSIQINFO |
| Parameter 3 | file format as known by IQ DLL                |

Probable cause

The file format of the database does not match the file format as expected by the IQ DLL. The IQ DDL and the database each have a format version and these versions must match.

## Error 1010003

Message text

Catalog format mismatch: database %2; Sybase IQ: %3. %1

| Item        | Value  |
|-------------|--|
| SQLCode     | -1010003L  |
| Constant    | EMSG_DATABASE_CATALOGFORMAT                      |
| SQLState    | QXA03  |
| ODBC State  | ERROR  |
| Parameter 1 | location of the exception                        |
| Parameter 2 | Catalog format of database as found in SYSIQINFO |
| Parameter 3 | Catalog format as known by IQ DLL                |

Probable cause

The catalog format of the database does not match the catalog format as expected by the IQ DLL. The IQ DLL and the Adaptive Server Anywhere Catalog each have a format version and these versions must match.

## Error 1010004

Message text

Stored procedure format mismatch: database %2; Sybase IQ: %3

| Item       | Value                  |
|------------|------------------------|
| SQLCode    | -1010004L              |
| Constant   | EMSG_DATABASE_SPFORMAT |
| SQLState   | QXA04                  |
| ODBC State | ERROR                  |

| Item        | Value  |
|-------------|--|
| Parameter 1 | origin of the exception                            |
| Parameter 2 | stored procedure of database as found in SYSIQINFO |
| Parameter 3 | stored procedure format as known by IQ DLL         |

Probable cause

The stored procedure format of the database does not match the stored procedure format as expected by the IQ DLL. The IQ DLL and the database each contain a stored procedure format version and these versions must match.

## Error 1010005

Message text

File format date mismatch: database %2; Sybase IQ: %3. %1

| Item        | Value  |
|-------------|--|
| SQLCode     | -1010005L  |
| Constant    | EMSG_DATABASE_TIMESTAMP                                |
| SQLState    | QXA05  |
| ODBC State  | ERROR  |
| Parameter 1 | location of the exception                              |
| Parameter 2 | file format date of the database as found in SYSIQINFO |
| Parameter 3 | file format as known by IQ DLL                         |

Probable cause

The file format date of the database does not match the file format date as expected by the IQ DLL.

## Error 1010006

Message text

Maximum blocks for dbspace '%2' is %3 blocks; %4 blocks were specified. %1

| Item        | Value  |
|-------------|--|
| SQLCode     | -1010006   |
| Constant    | EMSG_DATABASE_BLOCKRANGE   |
| SQLState    | QXA06  |
| ODBC State  | ERROR  |
| Parameter 1 | origin of the exception  |
| Parameter 2 | dbspace name   |
| Parameter 3 | maximum number of blocks for a dbspace given the database's block size |

| Item        | Value                             |
|-------------|-----------------------------------|
| Parameter 4 | maximum blocks the user specified |

Probable cause

Given a database's block size and the number of blocks specified by the user for the dbspace, the dbspace size (in bytes) would exceed the operating system's limit of bytes per file.

## Error 1010007

Message text

The number of blocks (%3) for dbspace file '%2' must match the number of blocks in the raw partition (%4).

| Item        | Value                              |
|-------------|------------------------------------|
| SQLCode     | -1010007                           |
| Constant    | EMSG_DATABASE_INVALIDNBLOCKS       |
| SQLState    | QXA07                              |
| ODBC State  | ERROR                              |
| Parameter 1 | origin of the exception            |
| Parameter 2 | dbspace name                       |
| Parameter 3 | user's number of blocks in dbspace |
| Parameter 4 | number of blocks in raw partition  |

Probable cause

When creating a dbspace on a raw partition, if the user specifies the dbspace's size, then it must match the size of the underlying raw partition.

## Error 1010008

Message text

For an IQ PAGE SIZE of %2, the dbspace file '%3' must have at least %4 MB.  
%1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1010008                  |
| Constant    | EMSG_DATABASE_DBNBLOCKS   |
| SQLState    | QXA08                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | page size                 |
| Parameter 3 | dbspace name              |

| Item        | Value                              |
|-------------|------------------------------------|
| Parameter 4 | required minimum size in megabytes |

Probable cause The named dbspace must have the minimum size in megabytes.

## Error 1010009

Message text Improper use of cursor- programming error %1

| Item       | Value                  |
|------------|------------------------|
| SQLCode    | -1010009               |
| Constant   | EMSG_CURSOR_PROG_ERROR |
| SQLState   | QXA09                  |
| ODBC State | ERROR                  |

Probable cause The programmer has misused the internal cursor class(es). This is an internal error and should be reported to Sybase.

## Error 1010010

Message text An invalid attribute flag was passed to the cursor

| Item       | Value                         |
|------------|-------------------------------|
| SQLCode    | -1010010                      |
| Constant   | EMSG_CURSOR_INVALID_ATTRIBUTE |
| SQLState   | QXA10                         |
| ODBC State | ERROR                         |

Probable cause A state violation was detected in the cursor.

## Error 1010011

Message text Not enough server threads available for this query.

| Item     | Value                  |
|----------|------------------------|
| SQLCode  | -1010011               |
| Constant | EMSG_CURSOR_NO_THREADS |
| SQLState | QXA11                  |

| Item       | Value |
|------------|-------|
| ODBC State | ERROR |

Probable cause No thread could be allocated to allow this query to be executed.

## Error 1010012

Message text The cursor is in an invalid state. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1010012                  |
| Constant    | EMSG_CURSOR_INVALID_STATE |
| SQLState    | QXA12                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |

Probable cause A state violation was detected in the cursor.

## Warning 1010013

Message text IQ cannot support the %1 connections requested by the server. Restart the server with-gm %2 on the command line.

| Item        | Value                           |
|-------------|---------------------------------|
| SQLCode     | 1010013                         |
| Constant    | EMSG_CONN_INFO                  |
| SQLState    | 00A13                           |
| ODBC State  | OK                              |
| Parameter 1 | number of connections           |
| Parameter 2 | number of supported connections |

Probable cause Inform the DBA about the number of connections.

## Error 1010013

Message text Raw partition %2 is already in use. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1010013                  |
| Constant    | EMSG_RAW_PARTITION_IN_USE |
| SQLState    | QXA13                     |
| ODBC State  | ERROR                     |
| Parameter 1 | origin of the exception   |
| Parameter 2 | name of raw partition     |

Probable cause                      User attempted to create dbspace on a raw partition which is currently in use by the database.

## Warning 1010014

Message text                      Default cache size is used for command %1.

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | 1010014                   |
| Constant    | EMSG_DEFAULTCACHESIZEUSED |
| SQLState    | QXA14                     |
| ODBC State  | OK                        |
| Parameter 1 | command type              |

Probable cause                      A warning is issued for the command that uses the default cache size.

## Error 1010015

Message text                      The MAIN store is out of space. Space must be added to the MAIN store first.  
%1

| Item        | Value                   |
|-------------|-------------------------|
| SQLCode     | -1010015                |
| Constant    | EMSG_MSNOSPACE          |
| SQLState    | QXA015                  |
| ODBC State  | ERROR                   |
| Parameter 1 | origin of the exception |

Probable cause                      The MAIN store is out of space. Space must be added to the MAIN store before space can be added to any other store.

**Error 1010016**

Message text

The TEMPORARY store is out of space. Space must be added to the TEMPORARY store first. %1

| Item        | Value                   |
|-------------|-------------------------|
| SQLCode     | -1010016                |
| Constant    | EMSG_TSNOSPACE          |
| SQLState    | QXA016                  |
| ODBC State  | ERROR                   |
| Parameter 1 | origin of the exception |

Probable cause

The TEMPORARY store is out of space. Space must be added to the TEMPORARY store before space can be added to any other store.

**Error 1010017**

Message text

You cannot create tables on a query node without a local IQ Store. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1010017L                 |
| Constant    | EMSG_DATABASE_MPX_NOLOCAL |
| SQLState    | QXA017                    |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |

Probable cause

Multiplex query nodes can create IQ objects only in a local store.

**Error 1010018**

Message text

Shared and local tables cannot participate in a JOIN INDEX. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1010018L                 |
| Constant    | EMSG_DATABASE_MPX_NOXJOIN |
| SQLState    | QXA018                    |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |

Probable cause                      You cannot create a join index between a table in main store and a table in local store.

## Error 1010019

Message text                        A Query node may not modify objects in the main IQ store. %1

| Item        | Value                      |
|-------------|----------------------------|
| SQLCode     | -1010019L                  |
| Constant    | EMSG_DATABASE_MPX_NOROMAIN |
| SQLState    | QXA019                     |
| ODBC State  | ERROR                      |
| Parameter 1 | location of the exception  |

Probable cause                      A query node may modify objects only in the local store, not in the main store.

## Error 1010020

Message text                        Nothing to backup: Query node has no local store. %1

| Item        | Value                          |
|-------------|--------------------------------|
| SQLCode     | -1010020L                      |
| Constant    | EMSG_DATABASE_MPX_NOLOCALFORBU |
| SQLState    | QXA020                         |
| ODBC State  | ERROR                          |
| Parameter 1 | location of the exception      |

Probable cause                      The query node has no local dbspaces, so there is nothing to backup.

## Error 1010021

Message text                        Foreign key constraint on a local table cannot reference a shared table. %1

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -1010021                  |
| Constant   | EMSG_DATABASE_MPX_NOXKEYS |
| SQLState   | QXA021                    |
| ODBC State | ERROR                     |

| Item        | Value                     |
|-------------|---------------------------|
| Parameter 1 | location of the exception |

Probable cause You cannot combine main and local tables in a foreign key relationship.

## Error 1010022

Message text Cannot modify main store from a multiplex query server. %1

| Item        | Value                            |
|-------------|----------------------------------|
| SQLCode     | -1010022                         |
| Constant    | EMSG_DATABASE_MPX_NOMAINRWACCESS |
| SQLState    | QXA022                           |
| ODBC State  | ERROR                            |
| Parameter 1 | location of the exception        |

Probable cause This general error is returned when a query server attempts to modify the shared main store. There are more detailed messages for specific cases.

## Error 1011004

Message text Cannot drop primary key or unique constraint because a foreign key still references it.

| Item       | Value                          |
|------------|--------------------------------|
| SQLCode    | -1011004                       |
| Constant   | EMSG_FKEY_STILL_EXISTS_TO_CKEY |
| SQLState   | QNA27                          |
| ODBC State | ERROR                          |

Probable cause An associated foreign key constraint still exists. You cannot drop a primary key or unique constraint when a foreign key still references it.

## Error 1012030

Message text for long binary/varchar Column '%2', database page size of (%3) must be greater than %4. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1012030                  |
| Constant    | EMSG_CAT_PAGESIZETOOSMALL |
| SQLState    | QUA30                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |
| Parameter 2 | column number             |
| Parameter 3 | requested page size       |
| Parameter 4 | minimum allowed page size |

Probable cause The database page size is too small to create a LONG BINARY or LONG VARCHAR column. The database page size must be 128K or greater to create a LONG BINARY or LONG VARCHAR column.

## Warning 1013015

Message text Row Delimiter: %1

| Item        | Value                 |
|-------------|-----------------------|
| SQLCode     | 1013015               |
| Constant    | EMSG_ISQL_PREVIEWROWD |
| SQLState    | 00A15                 |
| ODBC State  | OK                    |
| Parameter 1 | row delimiter         |

Probable cause This is the ROW DELIMITER used for the LOAD.

## Error 1013017

Message text An internal error occurred while calling a method on a db\_sql\_\*\_identifier. Object does not have an IIndex Handle. %1

| Item        | Value                    |
|-------------|--------------------------|
| SQLCode     | -1013017                 |
| Constant    | EMSG_SQL_NOINDEX         |
| SQLState    | QCA17                    |
| ODBC State  | ERROR                    |
| Parameter 1 | origin of the exception. |

Probable cause This error should not occur during normal operation. It is an internal programming error. If this error occurs, it should be reported to Sybase.

## Error 1013018

Message text An internal error occurred while calling a method on a db\_sql\_\*\_identifier. Object does not have an IColumn Handle. %1

| Item       | Value             |
|------------|-------------------|
| SQLCode    | -1013018          |
| Constant   | EMSG_SQL_NOCOLUMN |
| SQLState   | QCA18             |
| ODBC State | ERROR             |

Probable cause This error should not occur during normal operation. It is an internal error. If it occurs, it should be reported to Sybase.

## Error 1013019

Message text CHECK constraint has unsupported component %2. %1

| Item        | Value                              |
|-------------|------------------------------------|
| SQLCode     | -1013019L                          |
| Constant    | EMSG_SQL_IQ_UNSUPPORTED_CONSTRAINT |
| SQLState    | QCA19                              |
| ODBC State  | ERROR                              |
| Parameter 1 | location of the exception          |
| Parameter 2 | the unsupported component          |

Probable cause The CHECK constraint contains either a subquery, an aggregate function, a user defined function, or other components that are not supported by Sybase IQ. CHECK constraint is not supported by Sybase IQ.

## Error 1013020

Message text User defined default values are not supported. %1

| Item    | Value     |
|---------|-----------|
| SQLCode | -1013020L |

| Item        | Value                     |
|-------------|---------------------------|
| Constant    | EMSG_SQL_NODEFAULT        |
| SQLState    | QCA20                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |

Probable cause            User defined values are not supported by Sybase IQ.

## Error 1013021

Message text            Multicolumn indexes of the specified type are not supported. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1013021L                 |
| Constant    | EMSG_SQL_NOCLUSTEREDINDEX |
| SQLState    | QCA21                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |

Probable cause            Multicolumn indexes of the type specified by the user are not supported by Sybase IQ.

## Error 1013024

Message text            ALTER TABLE MODIFY <column> <datatype> is not supported. %1

| Item        | Value                   |
|-------------|-------------------------|
| SQLCode     | -1013024                |
| Constant    | EMSG_SQL_NOSUPPMODDTYPE |
| SQLState    | QCA24                   |
| ODBC State  | ERROR                   |
| Parameter 1 | origin of the exception |

Probable cause            Cannot modify the datatype of a column.

## Error 1013025

Message text            ALTER TABLE MODIFY <default-value> is not supported. %1

| Item       | Value                 |
|------------|-----------------------|
| SQLCode    | -1013025              |
| Constant   | EMSG_SQL_NOSUPPMODDEF |
| SQLState   | QCA25                 |
| ODBC State | ERROR                 |

Probable cause                      Cannot modify the default value of a column as defaults are not supported.

## Error 1013031

Message text                      An error occurred while calling a method on db\_sql\_\*\_identifier. Object does not have an ITable handle. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1013031                  |
| Constant    | EMSG_SQL_NOTABLE          |
| SQLState    | QCA31                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |

Probable cause                      This error should not occur during normal operation. It is an internal programming error. If this error occurs, it should be reported to Sybase.

## Error 1013033

Message text                      An error occurred while calling a method on db\_sql\_\*\_identifier. Object does not have an IJoinIndex handle. %1

| Item       | Value                |
|------------|----------------------|
| SQLCode    | -1013033             |
| Constant   | EMSG_SQL_NOJOININDEX |
| SQLState   | QCA33                |
| ODBC State | ERROR                |

Probable cause                      This error should not occur during normal operation. it is an internal programming error.

## Error 1013039

Message text

An internal error occurred while constructing a db\_sql\_\*\_identifier. The IColumn does not belong to the ITable. %1

| Item       | Value                   |
|------------|-------------------------|
| SQLCode    | -1013039                |
| Constant   | EMSG_SQL_COLUMNMISMATCH |
| SQLState   | QCA39                   |
| ODBC State | ERROR                   |

Probable cause

This error should not occur during normal operation. It is an internal error. If this error occurs, it should be reported to Sybase.

## Error 1013042

Message text

An error occurred while constructing a db\_sql\_\*\_identifier. The IIndex handle does not belong to the ITable. %1

| Item       | Value                  |
|------------|------------------------|
| SQLCode    | -1013042               |
| Constant   | EMSG_SQL_INDEXMISMATCH |
| SQLState   | QCA42                  |
| ODBC State | ERROR                  |

Probable cause

This error should not occur during normal operation. It is an internal error. If this error occurs, it should be reported to Sybase.

## Error 1013044

Message text

An internal error occurred. An invalid table type was encountered. %1

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -1013044                  |
| Constant   | EMSG_SQL_INVALID_TBL_TYPE |
| SQLState   | QCA44                     |
| ODBC State | ERROR                     |

Probable cause This is an internal error. The table type was not correctly set to BASE, VIEW, JVT, TMP, LOCAL TMP for its context. If this error occurs, it should be reported to Sybase.

## Error 1013045

Message text An invalid file name ('%2') was specified for a LOAD TABLE. The file name has zero length. %1

| Item       | Value                    |
|------------|--------------------------|
| SQLCode    | -1013045                 |
| Constant   | EMSG_SQL_INVALIDFILENAME |
| SQLState   | QCA45                    |
| ODBC State | ERROR                    |

Probable cause A file name of zero length was specified for a LOAD TABLE.

## Error 1013046

Message text An internal error occurred. An invalid index type was encountered. %1

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -1013046                  |
| Constant   | EMSG_SQL_INVALIDINDEXTYPE |
| SQLState   | QCA46                     |
| ODBC State | ERROR                     |

Probable cause This error should not occur during normal operation. It is an internal error and should be reported to Sybase.

## Warning 1013048

Message text Warning: Partial input record (%1 bytes) skipped at EOF (O/S %2). %3 rows read

| Item     | Value                        |
|----------|------------------------------|
| SQLCode  | 1013048                      |
| Constant | EMSG_SQL_INSERTPARTIALRECORD |
| SQLState | 01A48                        |

| Item        | Value  |
|-------------|--|
| ODBC State  | OK   |
| Parameter 1 | number of bytes at end of file that were skipped |
| Parameter 2 | operating system error number                    |
| Parameter 3 | number of rows read from the input file          |

Probable cause

An incomplete input record was found at the end of the flat file. If the operating system error returned is not zero, you may need to take action as dictated by the error and try the LOAD again.

## Warning 1013049

Message text

\*\*\*\*\*Possible Tape/File Error \*\*\*\*\*\n\nBytes Read: %1, O/S errno: %2\n %3 rows read. Input suspended.

| Item        | Value                         |
|-------------|-------------------------------|
| SQLCode     | 1013049                       |
| Constant    | EMSG_SQL_INSERTTAPEERROR      |
| SQLState    | 01A49                         |
| ODBC State  | OK                            |
| Parameter 1 | number of bytes read          |
| Parameter 2 | operating system error number |
| Parameter 3 | number of rows read           |

Probable cause

Take action as dictated by the operating system error and retry the operation.

## Error 1013050

Message text

The Temp\_Extract\_Name1 option is set. The current operation will be rolled back. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1013050L                 |
| Constant    | EMSG_SQL_OP_PROHIBITED    |
| SQLState    | QCA50                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |

Probable cause            You attempted to perform one of the operations that is disallowed when TEMP\_EXTRACT\_NAME1 is set:

LOAD, DELETE, INSERT or INSERT...LOCATION to a table that is the top table in a join

SYNCHRONIZE JOIN INDEX (issued explicitly or executed as part of CREATE JOIN INDEX)

INSERT...SELECT

## Error 1013052

Message text            The BLOCK FACTOR for this LOAD cannot be zero. %1

| Item       | Value                        |
|------------|------------------------------|
| SQLCode    | -1013052                     |
| Constant   | EMSG_SQL_BLOCKFACTOR_IS_ZERO |
| SQLState   | QCA52                        |
| ODBC State | ERROR                        |

Probable cause            The BLOCK FACTOR for LOAD cannot be zero.

## Error 1013054

Message text            Delimiter '%2' must be 1 to 4 characters in length. %1

| Item       | Value                         |
|------------|-------------------------------|
| SQLCode    | -1013054                      |
| Constant   | EMSG_SQL_INVALIDDELIMITERSIZE |
| SQLState   | QCA54                         |
| ODBC State | ERROR                         |

Probable cause            The row or column delimiter in a LOAD statement must be 1–4 characters.

## Error 1013061

Message text            Missing row delimiter detected during a row delimiter insert. %1

| Item       | Value                        |
|------------|------------------------------|
| SQLCode    | -1013061                     |
| Constant   | MSG_SQL_MISSINGROWTERMINATOR |
| SQLState   | QCA61                        |
| ODBC State | ERROR                        |

Probable cause            The input data is missing a row delimiter.

## Error 1013063

Message text            Expected raw-data column type '%2' on input, but no input data exists.

| Item        | Value                              |
|-------------|------------------------------------|
| SQLCode     | -1013063                           |
| Constant    | MSG_SQL_EXPECTERAWFIELDTYPENOTSEEN |
| SQLState    | QCA63                              |
| ODBC State  | ERROR                              |
| Parameter 1 | location of the exception          |
| Parameter 2 | column datatype                    |

Probable cause            No data was found during a scan of an input file during insert.

## Error 1013064

Message text            Row delimiter not seen during scan of input file. At least one of the input rows is missing a terminator. %1

| Item        | Value                        |
|-------------|------------------------------|
| SQLCode     | -1013064                     |
| Constant    | MSG_SQL_ROWTERMINATORNOTSEEN |
| SQLState    | QCA64                        |
| ODBC State  | ERROR                        |
| Parameter 1 | location of the exception    |

Probable cause            A row delimiter has been omitted from an input file.

**Error 1013068**

Message text                      Constraint '%2' violated: Invalid value for column '%3' in table '%4'. %1

| Item        | Value                                      |
|-------------|--|
| SQLCode     | -1013068                                   |
| Constant    | EMSG_SQL_COLUMN_CHECK_CONSTRAINT_VIOLATED  |
| SQLState    | QCA68                                      |
| ODBC State  | ERROR                                      |
| Parameter 1 | location of the exception                  |
| Parameter 2 | constraint name                            |
| Parameter 3 | name of column on which violation occurred |
| Parameter 4 | table name                                 |

Probable cause                      The data being inserted or updated is invalid due to a column check constraint violation.

**Error 1013070**

Message text                      Cannot specify check constraints off and ignore all, ignore check, log all or log check during load. %1

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1013070L                 |
| Constant    | EMSG_SQL_IQ_LOAD_CONFLICT |
| SQLState    | QCA70                     |
| ODBC State  | ERROR                     |
| Parameter 1 | location of the exception |

Probable cause                      When check constraints is off during a load, ignore all, ignore check, log all, and log check are not available.

**Error 1013091**

Message text                      Column pairs %2=%3 could not be matched. %1

| Item     | Value                        |
|----------|------------------------------|

| Constant | EMSG_SQL_COLUMNPAIRSNOTFOUND |

| Item        | Value                   |
|-------------|-------------------------|
| SQLState    | QCA91                   |
| ODBC State  | ERROR                   |
| Parameter 1 | origin of the exception |
| Parameter 2 | column name             |
| Parameter 3 | column name             |

Probable cause

The columns specified from the CREATE JOIN INDEX could not be matched within the tables specified.

## Error 1013092

Message text

MONITOR for this database, connection and buffer cache already exists. %1

| Item       | Value                  |
|------------|------------------------|
| SQLCode    | -1013092               |
| Constant   | EMSG_SQL_MONITOREXISTS |
| SQLState   | QCA92                  |
| ODBC State | ERROR                  |

Probable cause

A monitor has already been started for this database, connection and buffer cache.

## Error 1013094

Message text

A matching column cannot be found for the foreign keys in %2. %1

| Item       | Value                       |
|------------|-----------------------------|
| SQLCode    | -1013094                    |
| Constant   | EMSG_SQL_KEYCOLUMNSNOTFOUND |
| SQLState   | QCA94                       |
| ODBC State | ERROR                       |

Probable cause

This message is returned during CREATE JOIN INDEX when the key options is used. Be sure that the tables specified in the join have foreign keys pointing to the other table to be joined.

## Error 1013095

Message text

CREATE JOIN does not support joining joins. %1

| Item       | Value                   |
|------------|-------------------------|
| SQLCode    | -1013095                |
| Constant   | EMSG_SQL_JOINJOINSYNTAX |
| SQLState   | QCA95                   |
| ODBC State | ERROR                   |

Probable cause

This message is returned during CREATE JOIN INDEX when both the left hand side and right hand side of a 'FULL OUTER JOIN' keyword set are both joins. For example, (A FOJ B) FOJ (C FOJ D). The join of a-b is being joined to c-d.

## Error 1013097

Message text

Join Index %2 not unique. %1

| Item        | Value                      |
|-------------|----------------------------|
| SQLCode     | -1013097                   |
| Constant    | EMSG_SQL_JOINDUPLICATENAME |
| SQLState    | QCA97                      |
| ODBC State  | ERROR                      |
| Parameter 2 | join index name            |

Probable cause

You have attempted to create a joined index with a name in the existing join index.

## Error 1013098

Message text

The foreign key %2 participates in join %3 and cannot be ALTERed. %1

| Item        | Value                         |
|-------------|-------------------------------|
| SQLCode     | -1013098                      |
| Constant    | EMSG_CAT_JOINFIELDKEYMAT      |
| SQLState    | QCA98                         |
| ODBC State  | ERROR                         |
| Parameter 1 | location of the exception     |
| Parameter 2 | the column of the foreign key |

| Item        | Value                      |
|-------------|----------------------------|
| Parameter 3 | the name of the join index |

Probable cause This message is returned during ALTER, when a foreign key that is about to be altered participates in the join of two tables.

## Error 1013099

Message text Join Indexes do not support multipart foreign key found in table %2. %1

| Item        | Value                       |
|-------------|-----------------------------|
| SQLCode     | -1013099                    |
| Constant    | EMSG_SQL_JOINMULTIKEYCOLUMN |
| SQLState    | QCA99                       |
| ODBC State  | ERROR                       |
| Parameter 1 | origin of the exception     |
| Parameter 2 | foreign table name          |

Probable cause You have attempted to create a joined index with a multipart foreign key.

## Error 1013103

Message text JI MATCH  
E=%1;S=%2;TID=%3;NRRows=%4;JID=%5;NTab=%6;Miss=%7;Data=%8

| Item        | Value   |
|-------------|---|
| SQLCode     | -1013103  |
| Constant    | EMSG_SQL_JOIN_MATCH_SCORE   |
| SQLState    | QCB03   |
| ODBC State  | OK  |
| Parameter 1 | the ID of the match (an index into the array of scores)                     |
| Parameter 2 | the Join Match Score (how well it matched)                                  |
| Parameter 3 | the Table ID used to find a match   |
| Parameter 4 | the number of rows in the table   |
| Parameter 5 | the Join Index ID being tested for a match                                  |
| Parameter 6 | the number of tables that matched the join                                  |
| Parameter 7 | the number of tables that missed, zero for exact and minus one for no match |

| Item        | Value                                  |
|-------------|--|
| Parameter 8 | a flag specifying if the join has data |

Probable cause

During a SELECT the JOIN INDEXes are searched for a good match to increase the speed of the query. This message relays the scoring given to each table/join index matched.

## Error 1013104

Message text

JI NOMATCH- Entry=%1, Table=%2, Join=%3

| Item        | Value   |
|-------------|---|
| SQLCode     | -1013104  |
| Constant    | EMSG_SQL_JOIN_NOMATCH                                   |
| SQLState    | QCB04   |
| ODBC State  | OK  |
| Parameter 1 | the ID of the match (an index into the array of scores) |
| Parameter 2 | the table ID used to find a match                       |
| Parameter 3 | the Join Index ID being tested for a match              |

Probable cause

During a SELECT the Join Indexes are searched for a good match to increase the speed of the query. This message relays that this query has not been selected.

## Error 1013105

Message text

JI MATCH COMPARING- E=%1, MP=%2, JID=%3, Name=%4

| Item        | Value  |
|-------------|--|
| SQLCode     | -1013105   |
| Constant    | EMSG_SQL_JOIN_MATCHING   |
| SQLState    | QCB05  |
| ODBC State  | OK   |
| Parameter 1 | the ID of the match (an index into the array of scores)              |
| Parameter 2 | the number of tables missed (zero for exact, minus one for no match) |
| Parameter 3 | the Join Index ID being tested for a match                           |
| Parameter 4 | the name of the Join   |

Probable cause                      During the SELECT the Join Indexes are searched for a good match to increase the speed of the query. This message relays that this join is being compared to others.

## Error 1013106

Message text                      JI MATCH SELECTED- MP=% 1, JID=% 2,Name=% 3

| Item        | Value   |
|-------------|---|
| SQLCode     | -1013106  |
| Constant    | EMSG_SQL_JOIN_MATCH_SELECTED  |
| SQLState    | QCB06   |
| ODBC State  | OK  |
| Parameter 1 | the number of tables that missed, zero for exact and minus one for no match |

Probable cause                      During a SELECT, the Join Indexes are searched for a good match to increase the speed of the query. This message relays that this join completely replaces the requested tree.

## Error 1013107

Message text                      JI MATCH EXACT- This join exactly matches the requested tree

| Item       | Value                     |
|------------|---------------------------|
| SQLCode    | -1013107                  |
| Constant   | EMSG_SQL_JOIN_MATCH_EXACT |
| SQLState   | QCB07                     |
| ODBC State | OK                        |

Probable cause                      During a SELECT the Join Indexes are searched for a good match to increase the speed of the query. This message relays that this join completely replaces the requested tree.

## Error 1013108

Message text                      JI MATCH- Building Match List for Table ID=% 1, Name=% 2

| Item        | Value                     |
|-------------|---------------------------|
| SQLCode     | -1013108                  |
| Constant    | EMSG_SQL_JOIN_MATCH_TABLE |
| SQLState    | QCB08                     |
| ODBC State  | OK                        |
| Parameter 1 | the table ID              |
| Parameter 2 | the name of the table     |

Probable cause

During a SELECT the Join Indexes are searched for a good match to increase the speed of the query. This message relays that this table will be queried for joins in that it participates in.

## Error 1013109

Message text

JI MATCH- Join Index ID=%1, Name=%2, TopTableID=%3

| Item        | Value                      |
|-------------|----------------------------|
| SQLCode     | -1013109                   |
| Constant    | EMSG_SQL_JOIN_MATCH_JOIN   |
| SQLState    | QCB09                      |
| ODBC State  | OK                         |
| Parameter 1 | the Join Index ID          |
| Parameter 2 | the Name of the Join Index |
| Parameter 3 | the Top Table ID           |

Probable cause

During a SELECT the Join Indexes are searched for a good match to increase the speed of the query. This message relays that this join will attempt to be matched during the matching process.

## Error 1013110

Message text

IQ had insufficient memory to create the buffer cache with the size specified with the Main\_Cache\_Memory\_MB or Temp\_Cache\_Memory\_MB options. Instead, the cache will be created using the default size.

| Item     | Value                          |
|----------|--------------------------------|
| SQLCode  | -1013110                       |
| Constant | EMSG_IQSTORE_OUTOFMEM_ONOPENDB |

| Item       | Value |
|------------|-------|
| SQLState   | QSB35 |
| ODBC State | OK    |

Probable cause If we catch an OUTFMEMORY exception when creating the MAIN or the TEMP buffer cache, we report this warning of our failure and retry to create the cache with the default settings (and NOT the settings of the hos\_paramset). This will allow the database administrator to re-open a database even if the Main\_Cache\_Memory\_MB or Temp\_Cache\_Memory\_MB options are set so high as to otherwise prevent the re-opening of the database.

## Error 10000133

Message text When inserting into table '%2', the column count (%3) must be between 1 and %4. %1

| Item        | Value                                     |
|-------------|---|
| SQLCode     | -10000133                                 |
| Constant    | EMSG_INSRT_COLUMNCOUNT                    |
| SQLState    | QDB33                                     |
| ODBC State  | ERROR                                     |
| Parameter 1 | location of the exception                 |
| Parameter 2 | table name                                |
| Parameter 3 | number of columns attempting to insert to |
| Parameter 4 | number of columns in the table            |

Probable cause The number of columns you trying to insert is not consistent with the number of columns in the table.

## Internal errors (assertion failed)

Sybase IQ has many internal checks that have been designed to detect possible database inconsistencies as soon as possible. If the database server prints an Assertion Failed message, you should not continue to use it before attempting to determine the cause. You should record the assertion number displayed on the screen and report the error to Sybase Technical Support.

The DBVALID utility and the sp\_iqcheckdb system stored procedure are useful for determining if your database is not consistent. You may find it necessary to reconstruct your data from backups and transaction logs.

# SQL Preprocessor Error Messages

## About this chapter

This chapter presents a list of the SQL preprocessor errors, warnings, and flags. Other database error messages reported by Sybase IQ are listed in Chapter 6, “Database Error Messages.”

The SQL preprocessor (SQLPP) is described in Chapter 4, “The SQL Preprocessor” of the *Sybase IQ Utility Guide*.

## Alphabetic list of SQLPP messages

This section lists alphabetically the messages generated by the SQL preprocessor. See the section “SQLPP messages indexed by error message value” on page 461 for more information about these messages.

**Table 7-1: Alphabetic list of SQLPP messages**

| Message  | Message value |
|--|---------------|
| “subscript value %1 too large”                             | 2601          |
| “combined pointer and arrays not supported for host types” | 2602          |
| “only one dimensional arrays supported for char type”      | 2603          |
| “VARCHAR type must have a length”                          | 2604          |
| “arrays of VARCHAR not supported”                          | 2605          |
| “VARCHAR host variables cannot be pointers”                | 2606          |
| “initializer not allowed on VARCHAR host variable”         | 2607          |
| “FIXCHAR type must have a length”                          | 2608          |
| “arrays of FIXCHAR not supported”                          | 2609          |
| “arrays of this type not supported”                        | 2610          |
| “precision must be specified for decimal type”             | 2611          |
| “arrays of decimal not allowed”                            | 2612          |
| “Unknown hostvar type”                                     | 2613          |
| “invalid integer”  | 2614          |
| “%1 host variable must be a C string type”                 | 2615          |

| Message  | Message value |
|--|---------------|
| "%1' symbol already defined"   | 2617          |
| "invalid type for sql statement variable"                            | 2618          |
| "Cannot find include file '%1'"                                      | 2619          |
| "host variable '%1' is unknown"                                      | 2620          |
| "indicator variable '%1' is unknown"                                 | 2621          |
| "invalid type for indicator variable '%1'"                           | 2622          |
| "invalid host variable type on '%1'"                                 | 2623          |
| "host variable '%1' has two different definitions"                   | 2625          |
| "statement '%1' not previously prepared"                             | 2626          |
| "cursor '%1' not previously declared"                                | 2627          |
| "unknown statement '%1'"   | 2628          |
| "host variables not allowed for this cursor"                         | 2629          |
| "host variables specified twice - on declare and open"               | 2630          |
| "must specify a host list or using clause on %1"                     | 2631          |
| "no INTO clause on SELECT statement"                                 | 2633          |
| "incorrect SQL language usage -- that is a '%1' extension"           | 2634          |
| "incorrect Embedded SQL language usage -- that is a '%1' extension"  | 2635          |
| "incorrect Embedded SQL syntax"                                      | 2636          |
| "missing ending quote of string"                                     | 2637          |
| "token too long"   | 2639          |
| "%1' host variable must be an integer type"                          | 2640          |
| "must specify an SQLDA on a DESCRIBE"                                | 2641          |
| "Two SQLDAs specified of the same type (INTO or USING)"              | 2642          |
| "cannot describe static cursors"                                     | 2646          |
| "Macros cannot be redefined"   | 2647          |
| "Invalid array dimension"  | 2648          |
| "invalid descriptor index"   | 2649          |
| "invalid field for SET DESCRIPTOR"                                   | 2650          |
| "field used more than once in SET DESCRIPTOR statement"              | 2651          |
| "data value must be a host variable"                                 | 2652          |
| "Into clause not allowed on declare cursor - ignored"                | 2660          |
| "unrecognized SQL syntax"  | 2661          |
| "unknown SQL function '%1'"  | 2662          |
| "wrong number of parms to sql function '%1'"                         | 2663          |
| "static statement names will not work properly if used by 2 threads" | 2664          |
| "host variable '%1' has been redefined"                              | 2665          |
| "vendor extension"   | 2666          |

| Message   | Message value |
|---|---------------|
| “intermediate SQL feature”  | 2667          |
| “full SQL feature”  | 2668          |
| “transact SQL extension”  | 2669          |
| “no declare section and no INCLUDE SQLCA statement”                     | 2680          |
| “unable to open temporary file”   | 2681          |
| “error reading temporary file”  | 2682          |
| “error writing output file”   | 2683          |
| “Inconsistent number of host variables for this cursor”                 | 2690          |
| “Inconsistent host variable types for this cursor”                      | 2691          |
| “Inconsistent indicator variables for this cursor”                      | 2692          |
| “no OPEN for cursor '%1’”   | 2694          |
| “no FETCH or PUT for cursor '%1’”                                       | 2695          |
| “Host variable '%1' is in use more than once with different indicators” | 2696          |

## SQLPP messages indexed by error message value

This section lists by error message value the messages generated by the SQL preprocessor. The messages may be errors or warnings, or either, depending on which SQLPP command-line options are set.

For more information about the SQLPP command-line options, see Chapter 4, “The SQL Preprocessor” in the *Sybase IQ Utility Guide*.

### subscript value %1 too large

| Message value | Message type |
|---------------|--------------|
| 2601          | Error        |

Probable cause

You have attempted to index a host variable that is an array with a value too large for the array.

## combined pointer and arrays not supported for host types

| Message value | Message type |
|---------------|--------------|
| 2602          | Error        |

Probable cause            You have used an array of pointers as a host variable. This is not legal.

## only one dimensional arrays supported for char type

| Message value | Message type |
|---------------|--------------|
| 2603          | Error        |

Probable cause            You have attempted to declare a host variable as an array of character arrays. This is not a legal host variable type.

## VARCHAR type must have a length

| Message value | Message type |
|---------------|--------------|
| 2604          | Error        |

Probable cause            You have attempted to declare a VARCHAR or BINARY host variable using the DECL\_VARCHAR or DECL\_BINARY macro but have not specified a size for the array.

## arrays of VARCHAR not supported

| Message value | Message type |
|---------------|--------------|
| 2605          | Error        |

Probable cause            You have attempted to declare a host variable as an array of VARCHAR or BINARY. This is not a legal host variable type.

## VARCHAR host variables cannot be pointers

| Message value | Message type |
|---------------|--------------|
| 2606          | Error        |

Probable cause You have attempted to declare a host variable as a pointer to a VARCHAR or BINARY. This is not a legal host variable type.

## initializer not allowed on VARCHAR host variable

| Message value | Message type |
|---------------|--------------|
| 2607          | Error        |

Probable cause You can not specify a C variable initializer for a host variable of type VARCHAR or BINARY. You must initialize this variable in regular C executable code.

## FIXCHAR type must have a length

| Message value | Message type |
|---------------|--------------|
| 2608          | Error        |

Probable cause You have used the DECL\_FIXCHAR macro to declare a host variable of type FIXCHAR but have not specified a length.

## arrays of FIXCHAR not supported

| Message value | Message type |
|---------------|--------------|
| 2609          | Error        |

Probable cause You have attempted to declare a host variable as an array of FIXCHAR arrays. This is not a legal host variable type.

## arrays of this type not supported

| Message value | Message type |
|---------------|--------------|
| 2610          | Error        |

Probable cause      You have attempted to declare a host variable array of a type that is not supported.

## precision must be specified for decimal type

| Message value | Message type |
|---------------|--------------|
| 2611          | Error        |

Probable cause      You must specify the precision when declaring a packed decimal host variable using the DECL\_DECIMAL macro. The scale is optional.

## arrays of decimal not allowed

| Message value | Message type |
|---------------|--------------|
| 2612          | Error        |

Probable cause      You have attempted to declare a host variable as an array of DECIMAL. This is not a legal host variable type.

## Unknown hostvar type

| Message value | Message type |
|---------------|--------------|
| 2613          | Error        |

Probable cause      You declared a host variable of a type not understood by the SQL preprocessor.

## invalid integer

| Message value | Message type |
|---------------|--------------|
| 2614          | Error        |

Probable cause An integer was required in an Embedded SQL statement (for a fetch offset, or a host variable array index, etc.) and the preprocessor was unable to convert what was supplied into an integer.

## '%1' host variable must be a C string type

| Message value | Message type |
|---------------|--------------|
| 2615          | Error        |

Probable cause A C string was required in an Embedded SQL statement (for a cursor name, option name, etc.) and the value supplied was not a C string.

## '%1' symbol already defined

| Message value | Message type |
|---------------|--------------|
| 2617          | Error        |

Probable cause You defined a host variable twice.

## invalid type for sql statement variable

| Message value | Message type |
|---------------|--------------|
| 2618          | Error        |

Probable cause A host variable used as a statement identifier should be of type `a_sql_statement_number`. You attempted to use a host variable of some other type as a statement identifier.

## Cannot find include file '%1'

| Message value | Message type |
|---------------|--------------|
| 2619          | Error        |

Probable cause      The specified include file was not found. Note that the preprocessor will use the INCLUDE environment variable to search for include files.

## host variable '%1' is unknown

| Message value | Message type |
|---------------|--------------|
| 2620          | Error        |

Probable cause      You have used a host variable in a statement and that host variable has not been declared in a declare section.

## indicator variable '%1' is unknown

| Message value | Message type |
|---------------|--------------|
| 2621          | Error        |

Probable cause      You have used a indicator variable in a statement and that indicator variable has not been declared in a declare section.

## invalid type for indicator variable '%1'

| Message value | Message type |
|---------------|--------------|
| 2622          | Error        |

Probable cause      Indicator variables must be of type short int. You have used a variable of a different type as an indicator variable.

**invalid host variable type on '%1'**

| Message value | Message type |
|---------------|--------------|
| 2623          | Error        |

Probable cause      You have used a host variable that is not a string type in a place where the preprocessor was expecting a host variable of a string type.

**host variable '%1' has two different definitions**

| Message value | Message type |
|---------------|--------------|
| 2625          | Error        |

Probable cause      The same host variable name was defined with two different types within the same module. Note that host variable names are global to a C module.

**statement '%1' not previously prepared**

| Message value | Message type |
|---------------|--------------|
| 2626          | Error        |

Probable cause      An Embedded SQL statement name has been used (EXECUTE) without first being prepared.

**cursor '%1' not previously declared**

| Message value | Message type |
|---------------|--------------|
| 2627          | Error        |

Probable cause      An Embedded SQL cursor name has been used (in a FETCH, OPEN, CLOSE, etc.) without first being declared.

## unknown statement '%1'

| Message value | Message type |
|---------------|--------------|
| 2628          | Error        |

Probable cause            You attempted to drop an Embedded SQL statement that doesn't exist.

## host variables not allowed for this cursor

| Message value | Message type |
|---------------|--------------|
| 2629          | Error        |

Probable cause            Host variables are not allowed on the declare statement for the specified cursor. If the cursor name is provided through a host variable, then you should use full dynamic SQL and prepare the statement. A prepared statement may have host variables in it.

## host variables specified twice - on declare and open

| Message value | Message type |
|---------------|--------------|
| 2630          | Error        |

Probable cause            You have specified host variables for a cursor on both the declare and the open statements. In the static case, you should specify the host variables on the declare statement. In the dynamic case, specify them on the open.

## must specify a host list or using clause on %1

| Message value | Message type |
|---------------|--------------|
| 2631          | Error        |

Probable cause            The specified statement requires host variables to be specified either in a host variable list or from an SQLDA.

**no INTO clause on SELECT statement**

| Message value | Message type |
|---------------|--------------|
| 2633          | Error        |

Probable cause      You specified an embedded static SELECT statement, but you did not specify an INTO clause for the results.

**incorrect SQL language usage -- that is a '%1' extension**

| Message value | Message type |
|---------------|--------------|
| 2634          | Error        |

**incorrect Embedded SQL language usage -- that is a '%1' extension**

| Message value | Message type |
|---------------|--------------|
| 2635          | Error        |

**incorrect Embedded SQL syntax**

| Message value | Message type |
|---------------|--------------|
| 2636          | Error        |

Probable cause      An Embedded SQL specific statement (OPEN, DECLARE, FETCH, etc.) has a syntax error.

**missing ending quote of string**

| Message value | Message type |
|---------------|--------------|
| 2637          | Error        |

Probable cause      You have specified a string constant in an Embedded SQL statement, but there is no ending quote before the end of line or end of file.

## token too long

| Message value | Message type |
|---------------|--------------|
| 2639          | Error        |

Probable cause      The SQL preprocessor has a maximum token length of 2K. Any token longer than 2K will produce this error. For constant strings in Embedded SQL commands (the main place this error shows up) use string concatenation to make a longer string.

## '%1' host variable must be an integer type

| Message value | Message type |
|---------------|--------------|
| 2640          | Error        |

Probable cause      You have used a host variable that is not of integer type in a statement where only an integer type host variable is allowed.

## must specify an SQLDA on a DESCRIBE

| Message value | Message type |
|---------------|--------------|
| 2641          | Error        |

## Two SQLDAs specified of the same type (INTO or USING)

| Message value | Message type |
|---------------|--------------|
| 2642          | Error        |

Probable cause      You have specified two INTO DESCRIPTOR or two USING DESCRIPTOR clauses for this statement.

**cannot describe static cursors**

| Message value | Message type |
|---------------|--------------|
| 2646          | Error        |

Probable cause      You have described a static cursor. When describing a cursor, the cursor name must be specified in a host variable.

**Macros cannot be redefined**

| Message value | Message type |
|---------------|--------------|
| 2647          | Error        |

Probable cause      A preprocessor macro has been defined twice, possibly in a header file.

**Invalid array dimension**

| Message value | Message type |
|---------------|--------------|
| 2648          | Error        |

Probable cause      The array dimension of the variable is negative.

**invalid descriptor index**

| Message value | Message type |
|---------------|--------------|
| 2649          | Error        |

Probable cause      You have allocated less than one variable with the ALLOCATE DESCRIPTOR statement.

**invalid field for SET DESCRIPTOR**

| Message value | Message type |
|---------------|--------------|
| 2650          | Error        |

Probable cause            An invalid or unknown keyword is present in a SET DESCRIPTOR statement. The keywords can only be TYPE, PRECISION, SCALE, LENGTH, INDICATOR, or DATA.

## field used more than once in SET DESCRIPTOR statement

| Message value | Message type |
|---------------|--------------|
| 2651          | Error        |

Probable cause            The same keyword has been used more than once inside a single SET DESCRIPTOR statement.

## data value must be a host variable

| Message value | Message type |
|---------------|--------------|
| 2652          | Error        |

Probable cause            The variable used in the SET DESCRIPTOR statement hasn't been declared as a host variable.

## Into clause not allowed on declare cursor - ignored

| Message value | Message type |
|---------------|--------------|
| 2660          | Warning      |

Probable cause            You have specified an INTO clause on a SELECT statement in a DECLARE CURSOR. Note that the INTO clause will be ignored.

## unrecognized SQL syntax

| Message value | Message type |
|---------------|--------------|
| 2661          | Warning      |

Probable cause            You have used a SQL statement that will probably cause a syntax error when the statement is sent to the database engine.

## unknown SQL function '%1'

| Message value | Message type |
|---------------|--------------|
| 2662          | Warning      |

Probable cause You have used a SQL function that is unknown to the preprocessor and will probably cause an error when the statement is sent to the database engine.

## wrong number of parms to sql function '%1'

| Message value | Message type |
|---------------|--------------|
| 2663          | Warning      |

Probable cause You have used a SQL function with the wrong number of parameters. This will likely cause an error when the statement is sent to the database engine.

## static statement names will not work properly if used by 2 threads

| Message value | Message type |
|---------------|--------------|
| 2664          | Warning      |

Probable cause You have used a static statement name and preprocessed with the `-r` reentrancy switch. Static statement names cause static variables to be generated that are filled in by the database. If two threads use the same statement, contention arises over this variable. Use a local host variable as the statement identifier instead of a static name.

## host variable '%1' has been redefined

| Message value | Message type |
|---------------|--------------|
| 2665          | Warning      |

Probable cause You have redefined the same host variable with a different host type. As far as the preprocessor is concerned, host variables are global; two host variables with different types cannot have the same name.

## vendor extension

| Message value | Message type            |
|---------------|-------------------------|
| 2666          | Flag (warning or error) |

Probable cause      You have used a feature that is not defined by SQL/92 and preprocessed with the -ee, -ei, -ef, -we, -wi or -wf flagging switch.

## intermediate SQL feature

| Message value | Message type            |
|---------------|-------------------------|
| 2667          | Flag (warning or error) |

Probable cause      You have used an intermediate-SQL/92 feature and preprocessed with the -ee or -we flagging switch.

## full SQL feature

| Message value | Message type            |
|---------------|-------------------------|
| 2668          | Flag (warning or error) |

Probable cause      You have used a full-SQL/92 feature and preprocessed with the -ee, -ei, -we or -wi flagging switch.

## transact SQL extension

| Message value | Message type            |
|---------------|-------------------------|
| 2669          | Flag (warning or error) |

Probable cause      You have used a Sybase Transact SQL feature that is not defined by SQL/92 and preprocessed with the -ee, -ei, -ef, -we, -wi or -wf flagging switch.

**no declare section and no INCLUDE SQLCA statement**

| Message value | Message type |
|---------------|--------------|
| 2680          | Error        |

Probable cause      The EXEC SQL INCLUDE SQLCA statement is missing from the source file.

**unable to open temporary file**

| Message value | Message type |
|---------------|--------------|
| 2681          | Error        |

Probable cause      An error occurred while attempting to open a temporary file.

**error reading temporary file**

| Message value | Message type |
|---------------|--------------|
| 2682          | Error        |

Probable cause      An error occurred while reading from a temporary file.

**error writing output file**

| Message value | Message type |
|---------------|--------------|
| 2683          | Error        |

Probable cause      An error occurred while writing to the output file.

**Inconsistent number of host variables for this cursor**

| Message value | Message type |
|---------------|--------------|
| 2690          | Error        |

Probable cause                      You have used a different number of host variables than the number previously used with the cursor. The number of host variables must be consistent for the cursor.

## Inconsistent host variable types for this cursor

| Message value | Message type |
|---------------|--------------|
| 2691          | Error        |

Probable cause                      You have used a host variable with a different type or length than the type or length previously used with the cursor. Host variable types must be consistent for the cursor.

## Inconsistent indicator variables for this cursor

| Message value | Message type |
|---------------|--------------|
| 2692          | Error        |

Probable cause                      You have used an indicator variable when one was not previously used with the cursor, or you have not used an indicator variable when one was previously used with the cursor. Indicator variable usage must be consistent for the cursor.

## no OPEN for cursor '%1'

| Message value | Message type |
|---------------|--------------|
| 2694          | Error        |

Probable cause                      A cursor is declared, and possibly used, but is never opened.

## no FETCH or PUT for cursor '%1'

| Message value | Message type |
|---------------|--------------|
| 2695          | Error        |

Probable cause                      A cursor is declared and opened, but is never used.

## Host variable '%1' is in use more than once with different indicators

| Message value | Message type |
|---------------|--------------|
| 2696          | Error        |

### Probable cause

You have used the same host variable multiple times with different indicator variables in the same statement. This is not supported.
